

Package ‘fastai’

April 11, 2024

Type Package

Title Interface to 'fastai'

Version 2.2.2

Maintainer Turgut Abdullayev <turqut.a.314@gmail.com>

Description The 'fastai' <<https://docs.fast.ai/index.html>> library simplifies training fast and accurate neural networks using modern best practices. It is based on research in to deep learning best practices undertaken at 'fast.ai', including 'out of the box' support for vision, text, tabular, audio, time series, and collaborative filtering models.

License Apache License 2.0

URL <https://github.com/EagerAI/fastai>

BugReports <https://github.com/EagerAI/fastai/issues>

Encoding UTF-8

RoxygenNote 7.3.1

Imports reticulate, generics, png, ggplot2, ggpubr, glue

Suggests knitr, testthat, rmarkdown, curl, magrittr, data.table, vctrs, stats, utils, R.utils, viridis, zeallot

VignetteBuilder knitr

NeedsCompilation no

Author Turgut Abdullayev [ctb, cre, cph, aut]

Repository CRAN

*.fastai.torch_core.TensorMask
Multiply

Description

Multiply

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a * b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

+.fastai.torch_core.TensorMask
Add

Description

Add

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a + b
```

Arguments

a tensor
b tensor

Value

tensor

`+ torch.nn.modules.container.Sequential`
Add layers to Sequential

Description

Add layers to Sequential

Usage

```
## S3 method for class 'torch.nn.modules.container.Sequential'  
a + b
```

Arguments

a sequential model
b layer

Value

model

`/.fastai.torch_core.TensorMask`
Div

Description

Div

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
a / b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

<.fastai.torch_core.TensorMask
Less

Description

Less

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a < b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

<=.fastai.torch_core.TensorMask
Less or equal

Description

Less or equal

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a <= b
```

Arguments

a tensor
b tensor

Value

tensor

`==.fastai.torch_core.TensorImage`
Equal

Description

Equal

Usage

```
## S3 method for class 'fastai.torch_core.TensorImage'  
a == b
```

Arguments

a tensor
b tensor

Value

tensor

`==.fastai.torch_core.TensorMask`
Equal

Description

Equal

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
a == b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

`==.torch.Tensor` *Equal*

Description

Equal

Usage

```
## S3 method for class 'torch.Tensor'
a == b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

`>.fastai.torch_core.TensorMask`
Greater

Description

Greater

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a > b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

`>=.fastai.torch_core.TensorMask`
Greater or equal

Description

Greater or equal

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
a >= b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|-----|------------|
| abs | <i>Abs</i> |
|-----|------------|

Description

Abs

Usage

```
## S3 method for class 'torch.Tensor'  
abs(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

```
abs.fastai.torch_core.TensorMask
    Abs
```

Description

Abs

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
abs(x)
```

Arguments

x tensor, e.g.: tensor(-1:-10)

Value

tensor

AccumMetric

AccumMetric

Description

Stores predictions and targets on CPU in accumulate to perform final calculations with 'func'.

Usage

```
AccumMetric(
  func,
  dim_argmax = NULL,
  activation = "no",
  thresh = NULL,
  to_np = FALSE,
  invert_arg = FALSE,
  flatten = TRUE,
  ...
)
```

Arguments

| | |
|------------|------------------------------|
| func | function |
| dim_argmax | dimension argmax |
| activation | activation |
| thresh | threshold point |
| to_np | to matrix or not |
| invert_arg | invert arguments |
| flatten | flatten |
| ... | additional arguments to pass |

Value

None

| | |
|----------|-----------------|
| accuracy | <i>Accuracy</i> |
|----------|-----------------|

Description

Compute accuracy with 'targ' when 'pred' is bs * n_classes

Usage

```
accuracy(inp, targ, axis = -1)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |
| axis | axis |

Value

None

| | |
|----------------|-----------------------|
| accuracy_multi | <i>Accuracy_multi</i> |
|----------------|-----------------------|

Description

Compute accuracy when 'inp' and 'targ' are the same size.

Usage

```
accuracy_multi(inp, targ, thresh = 0.5, sigmoid = TRUE)
```

Arguments

| | |
|---------|-----------------|
| inp | predictions |
| targ | targets |
| thresh | threshold point |
| sigmoid | sigmoid |

Value

None

| | |
|------------------------|----------------------------------|
| accuracy_thresh_expand | <i>Accuracy threshold expand</i> |
|------------------------|----------------------------------|

Description

Compute accuracy after expanding 'y_true' to the size of 'y_pred'.

Usage

```
accuracy_thresh_expand(y_pred, y_true, thresh = 0.5, sigmoid = TRUE)
```

Arguments

| | |
|---------|------------------|
| y_pred | predictions |
| y_true | actuals |
| thresh | threshold point |
| sigmoid | sigmoid function |

Value

None

| | |
|------|-------------|
| Adam | <i>Adam</i> |
|------|-------------|

Description

Adam

Usage

Adam(...)

Arguments

... parameters to pass

Value

None

| | |
|-----------|------------------|
| adam_step | <i>Adam_step</i> |
|-----------|------------------|

Description

Step for Adam with 'lr' on 'p'

Usage

adam_step(p, lr, mom, step, sqr_mom, grad_avg, sqr_avg, eps, ...)

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| mom | momentum |
| step | step |
| sqr_mom | sqr momentum |
| grad_avg | grad average |
| sqr_avg | sqr average |
| eps | epsilon |
| ... | additional arguments to pass |

Value

None

| | |
|-----------------|------------------------|
| AdaptiveAvgPool | <i>AdaptiveAvgPool</i> |
|-----------------|------------------------|

Description

nn(\$AdaptiveAvgPool layer for 'ndim')

Usage

```
AdaptiveAvgPool(sz = 1, ndim = 2)
```

Arguments

| | |
|------|----------------|
| sz | size |
| ndim | dimension size |

| | |
|----------------------|-----------------------------|
| AdaptiveConcatPool1d | <i>AdaptiveConcatPool1d</i> |
|----------------------|-----------------------------|

Description

Layer that concats 'AdaptiveAvgPool1d' and 'AdaptiveMaxPool1d'

Usage

```
AdaptiveConcatPool1d(size = NULL)
```

Arguments

| | |
|------|-------------|
| size | output size |
|------|-------------|

Value

None

AdaptiveConcatPool2d *AdaptiveConcatPool2d*

Description

Layer that concatenates 'AdaptiveAvgPool2d' and 'AdaptiveMaxPool2d'

Usage

AdaptiveConcatPool2d(size = NULL)

Arguments

size output size

Value

None

AdaptiveGANSwitcher *Adaptive GAN Switcher*

Description

Switcher that goes back to generator/critic when the loss goes below 'gen_thresh'/'crit_thresh'.

Usage

AdaptiveGANSwitcher(gen_thresh = NULL, critic_thresh = NULL)

Arguments

gen_thresh generator threshold
critic_thresh discriminator threshold

Value

None

AdaptiveLoss

AdaptiveLoss

Description

Expand the 'target' to match the 'output' size before applying 'crit'.

Usage

```
AdaptiveLoss(crit)
```

Arguments

crit critic

Value

Loss object

adaptive_pool

Adaptive_pool

Description

Adaptive_pool

Usage

```
adaptive_pool(pool_type)
```

Arguments

pool_type pooling type

Value

Nonee

| | |
|-----|------------|
| add | <i>Add</i> |
|-----|------------|

Description

Add

Sinh

Usage

```
## S3 method for class 'torch.Tensor'  
a + b
```

```
## S3 method for class 'torch.Tensor'  
sinh(x)
```

Arguments

a tensor

b tensor

x tensor

Value

tensor

tensor

| | |
|-------------|---------------------|
| AddChannels | <i>Add Channels</i> |
|-------------|---------------------|

Description

Add 'n_dim' channels at the end of the input.

Usage

AddChannels(n_dim)

Arguments

n_dim number of dimensions

| | |
|----------|------------------|
| AddNoise | <i>Add Noise</i> |
|----------|------------------|

Description

Adds noise of specified color and level to the audio signal

Usage

```
AddNoise(noise_level = 0.05, color = 0)
```

Arguments

| | |
|-------------|-------------|
| noise_level | noise level |
| color | int, color |

Value

None

| | |
|---------------------|----------------------------|
| add_cyclic_datepart | <i>Add cyclic datepart</i> |
|---------------------|----------------------------|

Description

Helper function that adds trigonometric date/time features to a date in the column 'field_name' of 'df'.

Usage

```
add_cyclic_datepart(
  df,
  field_name,
  prefix = NULL,
  drop = TRUE,
  time = FALSE,
  add_linear = FALSE
)
```

Arguments

| | |
|------------|------------|
| df | df |
| field_name | field_name |
| prefix | prefix |
| drop | drop |
| time | time |
| add_linear | add_linear |

Value

data frame

| | |
|--------------|---------------------|
| add_datepart | <i>Add datepart</i> |
|--------------|---------------------|

Description

Helper function that adds columns relevant to a date in the column 'field_name' of 'df'.

Usage

```
add_datepart(df, field_name, prefix = NULL, drop = TRUE, time = FALSE)
```

Arguments

| | |
|------------|------------|
| df | df |
| field_name | field_name |
| prefix | prefix |
| drop | drop |
| time | time |

Value

data frame

| | |
|----------------|-----------------------|
| AffineCoordTfm | <i>AffineCoordTfm</i> |
|----------------|-----------------------|

Description

Combine and apply affine and coord transforms

Usage

```
AffineCoordTfm(
  aff_fs = NULL,
  coord_fs = NULL,
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  mode_mask = "nearest",
  align_corners = NULL
)
```

Arguments

| | |
|---------------|---------------|
| aff_fs | aff fs |
| coord_fs | coordinate fs |
| size | size |
| mode | mode |
| pad_mode | padding mode |
| mode_mask | mode mask |
| align_corners | align corners |

Value

None

| | |
|--------------|----------------------|
| affine_coord | <i>Aaffine_coord</i> |
|--------------|----------------------|

Description

Aaffine_coord

Usage

```

affine_coord(
    x,
    mat = NULL,
    coord_tfm = NULL,
    sz = NULL,
    mode = "bilinear",
    pad_mode = "reflection",
    align_corners = TRUE,
    ...
)

```

Arguments

| | |
|---------------|----------------------|
| x | tensor |
| mat | mat |
| coord_tfm | coordinate tfm |
| sz | sz |
| mode | mode |
| pad_mode | padding mode |
| align_corners | align corners |
| ... | additional arguments |

Value

None

`affine_mat`*Affline mat*

Description

Affline mat

Usage`affine_mat(...)`**Arguments**`...` parameters to pass**Value**

None

`alexnet`*Alexnet*

Description

AlexNet model architecture

Usage`alexnet(pretrained = FALSE, progress)`**Arguments**`pretrained` pretrained or not
`progress` to see progress bar or not**Details**"One weird trick..." <<https://arxiv.org/abs/1404.5997>>**Value**

model

Examples

```
## Not run:

alexnet(pretrained = FALSE, progress = TRUE)

## End(Not run)
```

| | |
|-------------------|--------------------------|
| apply_perspective | <i>Apply_perspective</i> |
|-------------------|--------------------------|

Description

Apply perspective tranform on 'coords' with 'coeffs'

Usage

```
apply_perspective(coords, coeffs)
```

Arguments

| | |
|--------|-------------|
| coords | coordinates |
| coeffs | coefficient |

Value

None

| | |
|---------------|----------------------|
| APScoreBinary | <i>APScoreBinary</i> |
|---------------|----------------------|

Description

Average Precision for single-label binary classification problems

Usage

```
APScoreBinary(
  axis = -1,
  average = "macro",
  pos_label = 1,
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| average | average |
| pos_label | pos_label |
| sample_weight | sample_weight |

Value

None

APScoreMulti

APScoreMulti

Description

Average Precision for multi-label classification problems

Usage

```
APScoreMulti(  
    sigmoid = TRUE,  
    average = "macro",  
    pos_label = 1,  
    sample_weight = NULL  
)
```

Arguments

| | |
|---------------|---------------|
| sigmoid | sigmoid |
| average | average |
| pos_label | pos_label |
| sample_weight | sample_weight |

Value

None

| | |
|--------|---------------|
| aspect | <i>Aspect</i> |
|--------|---------------|

Description

Aspect

Usage

aspect(img)

Arguments

img image

Value

None

| | |
|----------|-----------------|
| as_array | <i>As_array</i> |
|----------|-----------------|

Description

As_array

Usage

as_array(tensor)

Arguments

tensor tensor object

Value

array

AudioBlock

AudioBlock

Description

A 'TransformBlock' for audios

Usage

```
AudioBlock(  
    cache_folder = NULL,  
    sample_rate = 16000,  
    force_mono = TRUE,  
    crop_signal_to = NULL  
)
```

Arguments

| | |
|----------------|-------------------|
| cache_folder | cache folder |
| sample_rate | sample rate |
| force_mono | force mono or not |
| crop_signal_to | int, crop signal |

Value

None

AudioBlock_from_folder

AudioBlock from folder

Description

Build a 'AudioBlock' from a 'path' and caches some intermediary results

Usage

```
AudioBlock_from_folder(  
    path,  
    sample_rate = 16000,  
    force_mono = TRUE,  
    crop_signal_to = NULL  
)
```

Arguments

| | |
|----------------|-------------------|
| path | directory, path |
| sample_rate | sample rate |
| force_mono | force mono or not |
| crop_signal_to | int, crop signal |

Value

None

AudioGetter

AudioGetter

Description

Create 'get_audio_files' partial function that searches path suffix 'suf'

Usage

```
AudioGetter(suf = "", recurse = TRUE, folders = NULL)
```

Arguments

| | |
|---------|------------------|
| suf | suffix |
| recurse | recursive or not |
| folders | vector, folders |

Details

and passes along 'kwargs', only in 'folders', if specified.

Value

None

| | |
|--------------|----------------------------|
| AudioPadType | <i>AudioPadType module</i> |
|--------------|----------------------------|

Description

AudioPadType module

Usage

AudioPadType()

Value

None

| | |
|------------------|--------------------------------|
| AudioSpectrogram | <i>AudioSpectrogram module</i> |
|------------------|--------------------------------|

Description

AudioSpectrogram module

Usage

AudioSpectrogram()

Value

None

| | |
|-------------|---------------------|
| AudioTensor | <i>Audio Tensor</i> |
|-------------|---------------------|

Description

Semantic torch tensor that represents an audio.

Usage

AudioTensor(x, sr = NULL)

Arguments

| | |
|----|--------|
| x | tensor |
| sr | sr |

Value

tensor

AudioTensor_create *AudioTensor create*

Description

Creates audio tensor from file

Usage

```
AudioTensor_create(  
    fn,  
    cache_folder = NULL,  
    frame_offset = 0,  
    num_frames = -1,  
    normalize = TRUE,  
    channels_first = TRUE  
)
```

Arguments

| | |
|----------------|----------------------------|
| fn | function |
| cache_folder | cache folder |
| frame_offset | offset |
| num_frames | number of frames |
| normalize | apply normalization or not |
| channels_first | channels first/last |

Value

None

| | |
|-------------|--------------------|
| AudioToMFCC | <i>AudioToMFCC</i> |
|-------------|--------------------|

Description

Transform to create MFCC features from audio tensors.

Usage

```
AudioToMFCC(
  sample_rate = 16000,
  n_mfcc = 40,
  dct_type = 2,
  norm = "ortho",
  log_mels = FALSE,
  melkwargs = NULL
)
```

Arguments

| | |
|-------------|---|
| sample_rate | sample rate |
| n_mfcc | number of mel-frequency cepstral coefficients |
| dct_type | dct type |
| norm | normalization type |
| log_mels | apply log to mels |
| melkwargs | additional arguments for mels |

Value

None

| | |
|----------------------|-----------------------------|
| AudioToMFCC_from_cfg | <i>AudioToMFCC from cfg</i> |
|----------------------|-----------------------------|

Description

Creates AudioToMFCC from configuration file

Usage

```
AudioToMFCC_from_cfg(audio_cfg)
```

Arguments

| | |
|-----------|---------------------|
| audio_cfg | audio configuration |
|-----------|---------------------|

Value

None

AudioToSpec_from_cfg *AudioToSpec from cfg*

Description

Creates AudioToSpec from configuration file

Usage

AudioToSpec_from_cfg(audio_cfg)

Arguments

audio_cfg audio configuration

Value

None

audio_extensions *Audio_extensions*

Description

get all allowed audio extensions

Usage

audio_extensions()

Value

vector

| | |
|----------------|---------------------|
| aug_transforms | <i>Augmentation</i> |
|----------------|---------------------|

Description

Utility func to easily create a list of flip, rotate, zoom, warp, lighting transforms.

Usage

```
aug_transforms(  
    mult = 1,  
    do_flip = TRUE,  
    flip_vert = FALSE,  
    max_rotate = 10,  
    min_zoom = 1,  
    max_zoom = 1.1,  
    max_lighting = 0.2,  
    max_warp = 0.2,  
    p_affine = 0.75,  
    p_lighting = 0.75,  
    xtra_tfms = NULL,  
    size = NULL,  
    mode = "bilinear",  
    pad_mode = "reflection",  
    align_corners = TRUE,  
    batch = FALSE,  
    min_scale = 1  
)
```

Arguments

| | |
|--------------|-----------------------|
| mult | ratio |
| do_flip | to do flip |
| flip_vert | flip vertical or not |
| max_rotate | maximum rotation |
| min_zoom | minimum zoom |
| max_zoom | maximum zoom |
| max_lighting | maximum lighting |
| max_warp | maximum warp |
| p_affine | probability affine |
| p_lighting | probability lighting |
| xtra_tfms | extra transformations |
| size | size of image |

| | |
|---------------|---------------|
| mode | mode |
| pad_mode | padding mode |
| align_corners | align_corners |
| batch | batch size |
| min_scale | minimum scale |

Value

None

Examples

```
## Not run:

URLs_PETS()

path = 'oxford-iiit-pet'

path_img = 'oxford-iiit-pet/images'
fnames = get_image_files(path_img)

dls = ImageDataLoaders_from_name_re(
    path, fnames, pat='(.)_.jpg$',
    item_tfms=Resize(size = 460), bs = 10,
    batch_tfms=list(aug_transforms(size = 224, min_scale = 0.75),
                    Normalize_from_stats( imagenet_stats() )
    )
)

## End(Not run)
```

AutoConfig

Auto configuration

Description

Auto configuration

Usage

AutoConfig()

Value

None

| | |
|--------------|---------------------|
| average_grad | <i>Average_grad</i> |
|--------------|---------------------|

Description

Keeps track of the avg grads of 'p' in 'state' with 'mom'.

Usage

```
average_grad(p, mom, dampening = FALSE, grad_avg = NULL, ...)
```

Arguments

| | |
|-----------|-------------------------|
| p | p |
| mom | momentum |
| dampening | dampening |
| grad_avg | grad average |
| ... | additional args to pass |

Value

None

| | |
|------------------|-------------------------|
| average_sqr_grad | <i>Average_sqr_grad</i> |
|------------------|-------------------------|

Description

Average_sqr_grad

Usage

```
average_sqr_grad(p, sqr_mom, dampening = TRUE, sqr_avg = NULL, ...)
```

Arguments

| | |
|-----------|-------------------------|
| p | p |
| sqr_mom | sqr momentum |
| dampening | dampening |
| sqr_avg | sqr average |
| ... | additional args to pass |

Value

None

| | |
|---------|----------------|
| AvgLoss | <i>AvgLoss</i> |
|---------|----------------|

Description

Flattens input and output, same as nn\$AvgLoss

Usage

```
AvgLoss(...)
```

Arguments

... parameters to pass

Value

Loss object

| | |
|---------|----------------|
| AvgPool | <i>AvgPool</i> |
|---------|----------------|

Description

nn\$AvgPool layer for 'ndim'

Usage

```
AvgPool(ks = 2, stride = NULL, padding = 0, ndim = 2, ceil_mode = FALSE)
```

Arguments

| | |
|-----------|---|
| ks | kernel size |
| stride | the stride of the window. Default value is kernel_size |
| padding | implicit zero padding to be added on both sides |
| ndim | dimension number |
| ceil_mode | when True, will use ceil instead of floor to compute the output shape |

Value

None

| | |
|---------------|----------------------|
| AvgSmoothLoss | <i>AvgSmoothLoss</i> |
|---------------|----------------------|

Description

Smooth average of the losses (exponentially weighted with 'beta')

Usage

```
AvgSmoothLoss(beta = 0.98)
```

Arguments

| | |
|------|------------------------|
| beta | beta, defaults to 0.98 |
|------|------------------------|

Value

Loss object

| | |
|----------|-----------------|
| AWD_LSTM | <i>AWD_LSTM</i> |
|----------|-----------------|

Description

AWD-LSTM inspired by <https://arxiv.org/abs/1708.02182>

Usage

```
AWD_LSTM(  
  vocab_sz,  
  emb_sz,  
  n_hid,  
  n_layers,  
  pad_token = 1,  
  hidden_p = 0.2,  
  input_p = 0.6,  
  embed_p = 0.1,  
  weight_p = 0.5,  
  bidir = FALSE  
)
```

Arguments

| | |
|-----------|-----------|
| vocab_sz | vocab_sz |
| emb_sz | emb_sz |
| n_hid | n_hid |
| n_layers | n_layers |
| pad_token | pad_token |
| hidden_p | hidden_p |
| input_p | input_p |
| embed_p | embed_p |
| weight_p | weight_p |
| bidir | bidir |

Value

None

awd_lstm_clas_split *Awd_lstm_clas_split*

Description

Split a RNN ‘model‘ in groups for differential learning rates.

Usage

```
awd_lstm_clas_split(model)
```

Arguments

| | |
|-------|-------|
| model | model |
|-------|-------|

Value

None

| | |
|-------------------|--------------------------|
| awd_lstm_lm_split | <i>Awd_lstm_lm_split</i> |
|-------------------|--------------------------|

Description

Split a RNN ‘model‘ in groups for differential learning rates.

Usage

```
awd_lstm_lm_split(model)
```

Arguments

| | |
|-------|-------|
| model | model |
|-------|-------|

Value

None

| | |
|----------|-----------------|
| AWD_QRNN | <i>AWD_QRNN</i> |
|----------|-----------------|

Description

Same as an AWD-LSTM, but using QRNNs instead of LSTMs

Usage

```
AWD_QRNN(  
  vocab_sz,  
  emb_sz,  
  n_hid,  
  n_layers,  
  pad_token = 1,  
  hidden_p = 0.2,  
  input_p = 0.6,  
  embed_p = 0.1,  
  weight_p = 0.5,  
  bidir = FALSE  
)
```

Arguments

| | |
|-----------|-----------|
| vocab_sz | vocab_sz |
| emb_sz | emb_sz |
| n_hid | n_hid |
| n_layers | n_layers |
| pad_token | pad_token |
| hidden_p | hidden_p |
| input_p | input_p |
| embed_p | embed_p |
| weight_p | weight_p |
| bidir | bidir |

Value

None

| | |
|------------------|-------------------------|
| BalancedAccuracy | <i>BalancedAccuracy</i> |
|------------------|-------------------------|

Description

Balanced Accuracy for single-label binary classification problems

Usage

BalancedAccuracy(axis = -1, sample_weight = NULL, adjusted = FALSE)

Arguments

| | |
|---------------|---------------|
| axis | axis |
| sample_weight | sample_weight |
| adjusted | adjusted |

References

None

BaseLoss

BaseLoss

Description

Flattens input and output, same as nn\$BaseLoss

Usage

```
BaseLoss(...)
```

Arguments

... parameters to pass

Value

Loss object

BaseTokenizer

BaseTokenizer

Description

Basic tokenizer that just splits on spaces

Usage

```
BaseTokenizer(split_char = " ")
```

Arguments

split_char separator

Value

None

BasicMelSpectrogram *BasicMelSpectrogram*

Description

BasicMelSpectrogram

Usage

```
BasicMelSpectrogram(  
    sample_rate = 16000,  
    n_fft = 400,  
    win_length = NULL,  
    hop_length = NULL,  
    f_min = 0,  
    f_max = NULL,  
    pad = 0,  
    n_mels = 128,  
    window_fn = torch()$hann_window,  
    power = 2,  
    normalized = FALSE,  
    kwkwargs = NULL,  
    mel = TRUE,  
    to_db = TRUE  
)
```

Arguments

| | |
|-------------|-----------------------------------|
| sample_rate | sample rate |
| n_fft | number of fast fourier transforms |
| win_length | windowing length |
| hop_length | hopping length |
| f_min | minimum frequency |
| f_max | maximum frequency |
| pad | padding |
| n_mels | number of mel-spectrograms |
| window_fn | window function |
| power | power |
| normalized | normalized or not |
| kwkwargs | additional arguments |
| mel | mel-spectrogram or not |
| to_db | to decibels |

Value

None

`BasicMFCC`*Basic MFCC*

Description

Basic MFCC

Usage

```
BasicMFCC(
    sample_rate = 16000,
    n_mfcc = 40,
    dct_type = 2,
    norm = "ortho",
    log_mels = FALSE,
    melkwargs = NULL
)
```

Arguments

| | |
|--------------------------|---|
| <code>sample_rate</code> | sample rate |
| <code>n_mfcc</code> | number of mel-frequency cepstral coefficients |
| <code>dct_type</code> | dct type |
| <code>norm</code> | normalization type |
| <code>log_mels</code> | apply log to mels |
| <code>melkwargs</code> | additional arguments for mels |

Value

None

BasicSpectrogram *BasicSpectrogram*

Description

BasicSpectrogram

Usage

```
BasicSpectrogram(  
  n_fft = 400,  
  win_length = NULL,  
  hop_length = NULL,  
  pad = 0,  
  window_fn = torch()$hann_window,  
  power = 2,  
  normalized = FALSE,  
  wkwargs = NULL,  
  mel = FALSE,  
  to_db = TRUE  
)
```

Arguments

| | |
|------------|-----------------------------------|
| n_fft | number of fast fourier transforms |
| win_length | windowing length |
| hop_length | hopping length |
| pad | padding mode |
| window_fn | window function |
| power | power |
| normalized | normalized or not |
| wkwargs | additional arguments |
| mel | mel-spectrogram or not |
| to_db | to decibels |

Value

None

| | |
|--------------|---------------------|
| basic_critic | <i>Basic critic</i> |
|--------------|---------------------|

Description

A basic critic for images 'n_channels' x 'in_size' x 'in_size'.

Usage

```
basic_critic(in_size, n_channels, ...)
```

Arguments

| | |
|------------|-------------------------------|
| in_size | input size |
| n_channels | The number of channels |
| ... | additional parameters to pass |

Value

None

Examples

```
## Not run:  
  
critic = basic_critic(in_size = 64, n_channels = 3, n_extra_layers = 1,  
                    act_cls = partial(nn.LeakyReLU, negative_slope = 0.2))  
  
## End(Not run)
```

| | |
|-----------------|------------------------|
| basic_generator | <i>Basic generator</i> |
|-----------------|------------------------|

Description

A basic generator from 'in_sz' to images 'n_channels' x 'out_size' x 'out_size'.

Usage

```
basic_generator(out_size, n_channels, ...)
```

Arguments

| | |
|------------|---------------------------|
| out_size | out_size |
| n_channels | n_channels |
| ... | additional params to pass |

Value

generator object

Examples

```
## Not run:

generator = basic_generator(out_size = 64, n_channels = 3, n_extra_layers = 1)

## End(Not run)
```

BatchNorm

BatchNorm

Description

BatchNorm layer with ‘nf’ features and ‘ndim’ initialized depending on ‘norm_type’.

Usage

```
BatchNorm(
  nf,
  ndim = 2,
  norm_type = 1,
  eps = 1e-05,
  momentum = 0.1,
  affine = TRUE,
  track_running_stats = TRUE
)
```

Arguments

| | |
|---------------------|--------------------------|
| nf | input shape |
| ndim | dimension number |
| norm_type | normalization type |
| eps | epsilon |
| momentum | momentum |
| affine | affine |
| track_running_stats | track running statistics |

Value

None

| | |
|-----------------|------------------------|
| BatchNorm1dFlat | <i>BatchNorm1dFlat</i> |
|-----------------|------------------------|

Description

'nn.BatchNorm1d', but first flattens leading dimensions

Usage

```
BatchNorm1dFlat(
    num_features,
    eps = 1e-05,
    momentum = 0.1,
    affine = TRUE,
    track_running_stats = TRUE
)
```

Arguments

| | |
|---------------------|--------------------------|
| num_features | number of features |
| eps | epsilon |
| momentum | momentum |
| affine | affine |
| track_running_stats | track running statistics |

Value

None

| | |
|-----------|------------------|
| BBoxBlock | <i>BBoxBlock</i> |
|-----------|------------------|

Description

A 'TransformBlock' for bounding boxes in an image

Usage

```
BBoxBlock()
```

Value

None

 BBoxLabeler

BBoxLabeler

Description

Delegates (`__call__`, `decode`, `setup`) to (`encodes`, `decodes`, `setups`) if `split_idx` matches

Usage

```
BBoxLabeler(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|------------------------|----------------|
| <code>enc</code> | encoder |
| <code>dec</code> | decoder |
| <code>split_idx</code> | split by index |
| <code>order</code> | order |

Value

None

 BBoxLblBlock

BBoxLblBlock

Description

A `TransformBlock` for labeled bounding boxes, potentially with `vocab`

Usage

```
BBoxLblBlock(vocab = NULL, add_na = TRUE)
```

Arguments

| | |
|---------------------|------------|
| <code>vocab</code> | vocabulary |
| <code>add_na</code> | add NA |

Value

None

Examples

```
## Not run:

URLs_COCO_TINY()

c(images, lbl_bbox) %<-% get_annotations('coco_tiny/train.json')

                 after_item = list(BBoxLabeler(), PointScaler(),
                                   ToTensor()),
                 after_batch = list(IntToFloatTensor(), aug_transforms())
)

coco_tdl %>% show_batch(dpi = 200)

## End(Not run)
```

bb_pad

Bb_pad

Description

Function that collect ‘samples’ of labelled bboxes and adds padding with ‘pad_idx’.

Usage

```
bb_pad(samples, pad_idx = 0)
```

Arguments

| | |
|---------|-----------|
| samples | samples |
| pad_idx | pad index |

Value

None

`BCELossFlat`*BCELossFlat*

| | |
|------------|-------------------|
| BrierScore | <i>BrierScore</i> |
|------------|-------------------|

Description

Brier score for single-label classification problems

Usage

BrierScore(axis = -1, sample_weight = NULL, pos_label = NULL)

Arguments

| | |
|---------------|---------------|
| axis | axis |
| sample_weight | sample_weight |
| pos_label | pos_label |

Value

None

| | |
|-----------------|------------------------|
| BrierScoreMulti | <i>BrierScoreMulti</i> |
|-----------------|------------------------|

Description

Brier score for multi-label classification problems

Usage

```
BrierScoreMulti(
  thresh = 0.5,
  sigmoid = TRUE,
  sample_weight = NULL,
  pos_label = NULL
)
```

Arguments

| | |
|---------------|---------------|
| thresh | thresh |
| sigmoid | sigmoid |
| sample_weight | sample_weight |
| pos_label | pos_label |

Value

None

| | |
|---------|----------------|
| bs_find | <i>Bs_find</i> |
|---------|----------------|

Description

Launch a mock training to find a good batch size to minimize training time.

Usage

```
bs_find(
  object,
  lr,
  num_it = NULL,
  n_batch = 5,
  simulate_multi_gpus = TRUE,
  show_plot = TRUE
)
```

Arguments

| | |
|---------------------|-------------------------------|
| object | model/learner |
| lr | learning rate |
| num_it | number of iterations |
| n_batch | number of batches |
| simulate_multi_gpus | simulate on multi gpus or not |
| show_plot | show plot or not |

Details

However, it may not be a good batch size to minimize the validation loss. A good batch size is where the Simple Noise Scale converge ignoring the small growing trend with the number of iterations if exists. The optimal batch size is about an order the magnitud where Simple Noise scale converge. Typically, the optimal batch size in image classification problems will be 2-3 times lower where

| | |
|-----------|------------------|
| bs_finder | <i>Bs finder</i> |
|-----------|------------------|

Description

Bs finder

Usage

bs_finder()

Value

None

| | |
|----|------------------------|
| bt | <i>Builtins module</i> |
|----|------------------------|

Description

Builtins module

Usage

bt()

Value

None

calculate_rouge *Calculate_rouge*

Description

Calculate_rouge

Usage

```
calculate_rouge(  
  predicted_txts,  
  reference_txts,  
  rouge_keys = c("rouge1", "rouge2", "rougeL"),  
  use_stemmer = TRUE  
)
```

Arguments

predicted_txts predicted texts
reference_txts reference texts
rouge_keys rouge keys
use_stemmer use stemmer or not

Value

None

Callback *Callback module*

Description

Callback module

Usage

```
Callback()
```

Value

None

| | |
|-----|------------|
| Cat | <i>Cat</i> |
|-----|------------|

Description

Concatenate layers outputs over a given dim

Usage

```
Cat(layers, dim = 1)
```

Arguments

| | |
|--------|----------------|
| layers | layers |
| dim | dimension size |

Value

None

| | |
|----------|------------------------|
| catalyst | <i>Catalyst module</i> |
|----------|------------------------|

Description

Catalyst module

Usage

```
catalyst()
```

Value

None

| | |
|----------------|-----------------------|
| catalyst_model | <i>Catalyst model</i> |
|----------------|-----------------------|

Description

Catalyst model

Usage

```
catalyst_model()
```

Value

model

| | |
|------------|-------------------|
| Categorify | <i>Categorify</i> |
|------------|-------------------|

Description

Transform the categorical variables to that type.

Usage

```
Categorify(cat_names, cont_names)
```

Arguments

| | |
|------------|--|
| cat_names | The names of the categorical variables |
| cont_names | The names of the continuous variables |

Value

None

| | |
|---------------|----------------------|
| CategoryBlock | <i>CategoryBlock</i> |
|---------------|----------------------|

Description

‘TransformBlock‘ for single-label categorical targets

Usage

```
CategoryBlock(vocab = NULL, sort = TRUE, add_na = FALSE)
```

Arguments

| | |
|--------|-------------|
| vocab | vocabulary |
| sort | sort or not |
| add_na | add NA |

Value

Block object

| |
|--------------------------------------|
| ceiling.fastai.torch_core.TensorMask |
| <i>Ceil</i> |

Description

Ceil

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
ceiling(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

ceiling_

Ceil

Description

Ceil

Usage

```
## S3 method for class 'torch.Tensor'  
ceiling(x)
```

Arguments

x tensor

Valuetensor

ChangeVolume

Change Volume

Description

Changes the volume of the signal

Usage

```
ChangeVolume(p = 0.5, lower = 0.5, upper = 1.5)
```

Argumentsp probability
lower lower bound
upper upper bound**Value**

None

 children_and_parameters

Children_and_parameters

Description

Return the children of 'm' and its direct parameters not registered in modules.

Usage

```
children_and_parameters(m)
```

Arguments

| | |
|---|------------|
| m | parameters |
|---|------------|

Value

None

ClassificationInterpretation_from_learner

ClassificationInterpretation_from_learner

Description

Construct interpretation object from a learner

Usage

```
ClassificationInterpretation_from_learner(
  learn,
  ds_idx = 1,
  dl = NULL,
  act = NULL
)
```

Arguments

| | |
|--------|---------------|
| learn | learner/model |
| ds_idx | ds by index |
| dl | dataloader |
| act | activation |

Value

interpretation object

| | |
|----------------|-----------------------|
| clean_raw_keys | <i>Clean_raw_keys</i> |
|----------------|-----------------------|

Description

Clean_raw_keys

Usage

clean_raw_keys(wgts)

Arguments

| | |
|------|------|
| wgts | wgts |
|------|------|

Value

None

| | |
|-------------------|--------------------------|
| clip_remove_empty | <i>Clip_remove_empty</i> |
|-------------------|--------------------------|

Description

Clip bounding boxes with image border and label background the empty ones

Usage

clip_remove_empty(bbox, label)

Arguments

| | |
|-------|-------|
| bbox | bbox |
| label | label |

Value

None

| | |
|----|------------------|
| cm | <i>Cm module</i> |
|----|------------------|

Description

Cm module

Usage

cm()

Value

None

| | |
|------------|-------------------|
| cnn_config | <i>Cnn config</i> |
|------------|-------------------|

Description

Convenience function to easily create a config for 'create_cnn_model'

Usage

```
cnn_config(
  cut = NULL,
  pretrained = TRUE,
  n_in = 3,
  init = nn()$init$kaiming_normal_,
  custom_head = NULL,
  concat_pool = TRUE,
  lin_ftrs = NULL,
  ps = 0.5,
  bn_final = FALSE,
  lin_first = FALSE,
  y_range = NULL
)
```

Arguments

| | |
|------------|--------------------|
| cut | cut |
| pretrained | pre-trained or not |
| n_in | input shape |
| init | initializer |

| | |
|-------------|---------------------------|
| custom_head | custom head |
| concat_pool | concatenate pooling |
| lin_ftrs | linear filters |
| ps | parameter server |
| bn_final | batch normalization final |
| lin_first | linear first |
| y_range | y_range |

Value

None

`cnn_learner`*Cnn_learner*

Description

Build a convnet style learner from ‘dls’ and ‘arch’

Usage

```

cnn_learner(
  dls,
  arch,
  loss_func = NULL,
  pretrained = TRUE,
  cut = NULL,
  splitter = NULL,
  y_range = NULL,
  config = NULL,
  n_out = NULL,
  normalize = TRUE,
  opt_func = Adam(),
  lr = 0.001,
  cbs = NULL,
  metrics = NULL,
  path = NULL,
  model_dir = "models",
  wd = NULL,
  wd_bn_bias = FALSE,
  train_bn = TRUE,
  moms = list(0.95, 0.85, 0.95)
)

```

Arguments

| | |
|------------|---|
| dls | data loader object |
| arch | a model architecture |
| loss_func | loss function |
| pretrained | pre-trained or not |
| cut | cut |
| splitter | It is a function that takes self.model and returns a list of parameter groups (or just one parameter group if there are no different parameter groups). |
| y_range | y_range |
| config | configuration |
| n_out | the number of out |
| normalize | normalize |
| opt_func | The function used to create the optimizer |
| lr | learning rate |
| cbs | Cbs is one or a list of Callbacks to pass to the Learner. |
| metrics | It is an optional list of metrics, that can be either functions or Metrics. |
| path | The folder where to work |
| model_dir | Path and model_dir are used to save and/or load models. |
| wd | It is the default weight decay used when training the model. |
| wd_bn_bias | It controls if weight decay is applied to BatchNorm layers and bias. |
| train_bn | It controls if BatchNorm layers are trained even when they are supposed to be frozen according to the splitter. |
| moms | The default momentums used in Learner.fit_one_cycle. |

Value

learner object

Examples

```
## Not run:

URLs_MNIST_SAMPLE()
# transformations
tfms = aug_transforms(do_flip = FALSE)
path = 'mnist_sample'
bs = 20

#load into memory
data = ImageDataLoaders_from_folder(path, batch_tfms = tfms, size = 26, bs = bs)

learn = cnn_learner(data, resnet18(), metrics = accuracy, path = getwd())
```

```
## End(Not run)
```

COCOMetric

COCOMetric

Description

Wrapper around [cocoapi evaluator](<https://github.com/cocodataset/cocoapi>)

Usage

```
COCOMetric(  
  metric_type = COCOMetricType()$bbox,  
  print_summary = FALSE,  
  show_pbar = FALSE  
)
```

Arguments

`metric_type` Dependent on the task you're solving.
`print_summary` If 'TRUE', prints a table with statistics.
`show_pbar` If 'TRUE' shows pbar when preparing the data for evaluation.

Details

Calculates average precision. # Arguments `metric_type`: Dependent on the task you're solving. `print_summary`: If 'TRUE', prints a table with statistics. `show_pbar`: If 'TRUE' shows pbar when preparing the data for evaluation.

Value

None

| | |
|----------------|-----------------------|
| COCOMetricType | <i>COCOMetricType</i> |
|----------------|-----------------------|

Description

Available options for 'COCOMetric'

Usage

COCOMetricType()

Value

None

| | |
|------------|-------------------|
| CohenKappa | <i>CohenKappa</i> |
|------------|-------------------|

Description

Cohen kappa for single-label classification problems

Usage

CohenKappa(axis = -1, labels = NULL, weights = NULL, sample_weight = NULL)

Arguments

| | |
|---------------|---------------|
| axis | axis |
| labels | labels |
| weights | weights |
| sample_weight | sample_weight |

Value

None

| | |
|--------|----------------------|
| collab | <i>Collab module</i> |
|--------|----------------------|

Description

Collab module

Usage

collab()

Value

None

| | |
|-------------------------------|--------------------------------------|
| CollabDataLoaders_from_dblock | <i>CollabDataLoaders_from_dblock</i> |
|-------------------------------|--------------------------------------|

Description

Create a dataloaders from a given ‘dblock’

Usage

```
CollabDataLoaders_from_dblock(
    dblock,
    source,
    path = ".",
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL
)
```

Arguments

| | |
|---------------|---|
| dblock | dblock |
| source | source |
| path | The folder where to work |
| bs | The batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device |

Value

None

CollabDataLoaders_from_df
CollabDataLoaders_from_df

Description

Create a ‘DataLoaders’ suitable for collaborative filtering from ‘ratings’.

Usage

```
CollabDataLoaders_from_df(
    ratings,
    valid_pct = 0.2,
    user_name = NULL,
    item_name = NULL,
    rating_name = NULL,
    seed = NULL,
    path = ".",
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL
)
```

Arguments

| | |
|---------------|--|
| ratings | ratings |
| valid_pct | The random percentage of the dataset to set aside for validation (with an optional seed) |
| user_name | The name of the column containing the user (defaults to the first column) |
| item_name | The name of the column containing the item (defaults to the second column) |
| rating_name | The name of the column containing the rating (defaults to the third column) |
| seed | random seed |
| path | The folder where to work |
| bs | The batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | the device, e.g. cpu, cuda, and etc. |

Value

None

Examples

```
## Not run:

URLs_MOVIE_LENS_ML_100k()
c(user,item,title) %<-% list('userId','movieId','title')
ratings = fread('ml-100k/u.data', col.names = c(user,item,'rating','timestamp'))
movies = fread('ml-100k/u.item', col.names = c(item, 'title', 'date', 'N', 'url',
                                             paste('g',1:19,sep = '')))
rating_movie = ratings[movies[, .SD, .SDcols=c(item,title)], on = item]
dls = CollabDataLoaders_from_df(rating_movie, seed = 42, valid_pct = 0.1, bs = 64,
item_name=title, path='ml-100k')

## End(Not run)
```

collab_learner

Collab_learner

Description

Create a Learner for collaborative filtering on ‘dls’.

Usage

```
collab_learner(
  dls,
  n_factors = 50,
  use_nn = FALSE,
  emb_szs = NULL,
  layers = NULL,
  config = NULL,
  y_range = NULL,
  loss_func = NULL,
  opt_func = Adam(),
  lr = 0.001,
  splitter = trainable_params(),
  cbs = NULL,
  metrics = NULL,
  path = NULL,
  model_dir = "models",
  wd = NULL,
  wd_bn_bias = FALSE,
  train_bn = TRUE,
  moms = list(0.95, 0.85, 0.95)
)
```

Arguments

| | |
|------------|--|
| dls | a data loader object |
| n_factors | The number of factors |
| use_nn | use_nn |
| emb_szs | embedding size |
| layers | list of layers |
| config | configuration |
| y_range | y_range |
| loss_func | It can be any loss function you like. It needs to be one of fastai's if you want to use Learn.predict or Learn.get_preds, or you will have to implement special methods (see more details after the BaseLoss documentation). |
| opt_func | The function used to create the optimizer |
| lr | learning rate |
| splitter | It is a function that takes self.model and returns a list of parameter groups (or just one parameter group if there are no different parameter groups). |
| cbs | Cbs is one or a list of Callbacks to pass to the Learner. |
| metrics | It is an optional list of metrics, that can be either functions or Metrics. |
| path | The folder where to work |
| model_dir | Path and model_dir are used to save and/or load models. |
| wd | It is the default weight decay used when training the model. |
| wd_bn_bias | It controls if weight decay is applied to BatchNorm layers and bias. |
| train_bn | It controls if BatchNorm layers are trained even when they are supposed to be frozen according to the splitter. |
| moms | The default momentums used in Learner.fit_one_cycle. |

Value

learner object

Examples

```
## Not run:

URLs_MOVIE_LENS_ML_100k()
c(user,item,title) %<-% list('userId','movieId','title')
ratings = fread('ml-100k/u.data', col.names = c(user,item,'rating','timestamp'))
movies = fread('ml-100k/u.item', col.names = c(item, 'title', 'date', 'N', 'url',
      paste('g',1:19,sep = '')))
rating_movie = ratings[movies[, .SD, .SDcols=c(item,title)], on = item]
dls = CollabDataLoaders_from_df(rating_movie, seed = 42, valid_pct = 0.1, bs = 64,
item_name=title, path='ml-100k')

learn = collab_learner(dls, n_factors = 40, y_range=c(0, 5.5))
```

```
learn %>% fit_one_cycle(1, 5e-3, wd = 1e-1)

## End(Not run)
```

CollectDataCallback *CollectDataCallback*

Description

Collect all batches, along with pred and loss, into self.data. Mainly for testing

Usage

```
CollectDataCallback(...)

CollectDataCallback(...)
```

Arguments

... arguments to pass

Value

None
None

colors *Colors module*

Description

Colors module

Usage

```
colors()
```

Value

None

 ColReader

ColReader

Description

Read 'cols' in 'row' with potential 'pref' and 'suff'

Usage

```
ColReader(cols, pref = "", suff = "", label_delim = NULL)
```

Arguments

| | |
|-------------|-----------------|
| cols | columns |
| pref | pref |
| suff | suffix |
| label_delim | label separator |

Value

None

ColSplitter

ColSplitter

Description

Split 'items' (supposed to be a dataframe) by value in 'col'

Usage

```
ColSplitter(col = "is_valid")
```

Arguments

| | |
|-----|--------|
| col | column |
|-----|--------|

Value

None

combined_flat_anneal *Combined_flat_anneal*

Description

Create a schedule with constant learning rate 'start_lr' for 'pct' proportion of the training, and a 'curve_type' learning rate (till 'end_lr') for remaining portion of training.

Usage

```
combined_flat_anneal(pct, start_lr, end_lr = 0, curve_type = "linear")
```

Arguments

| | |
|------------|--|
| pct | Proportion of training with a constant learning rate. |
| start_lr | Desired starting learning rate, used for beginning pct of training. |
| end_lr | Desired end learning rate, training will conclude at this learning rate. |
| curve_type | Curve type for learning rate annealing. Options are 'linear', 'cosine', and 'exponential'. |

competitions_list *Competitions list*

Description

Competitions list

Usage

```
competitions_list(
  group = NULL,
  category = NULL,
  sort_by = NULL,
  page = 1,
  search = NULL
)
```

Arguments

| | |
|----------|---|
| group | group to filter result to |
| category | category to filter result to |
| sort_by | how to sort the result, see valid_competition_sort_by for options |
| page | the page to return (default is 1) |
| search | a search term to use (default is empty string) |

Value

list of competitions

competition_download_file

Competition download file

Description

download a competition file to a designated location, or use

Usage

```
competition_download_file(  
  competition,  
  file_name,  
  path = NULL,  
  force = FALSE,  
  quiet = FALSE  
)
```

Arguments

| | |
|-------------|---|
| competition | the name of the competition |
| file_name | the configuration file name |
| path | a path to download the file to |
| force | force the download if the file already exists (default FALSE) |
| quiet | suppress verbose output (default is FALSE) |

Value

None

Examples

```
## Not run:  
  
com_nm = 'titanic'  
  
titanic_files = competition_list_files(com_nm)  
titanic_files = lapply(1:length(titanic_files),  
  function(x) as.character(titanic_files[[x]]))  
  
str(titanic_files)  
  
if(!dir.exists(com_nm)) {
```

```
    dir.create(com_nm)
  }

  # download via api
  competition_download_files(competition = com_nm, path = com_nm, unzip = TRUE)

## End(Not run)
```

competition_download_files
Competition download files

Description

Competition download files

Usage

```
competition_download_files(  
  competition,  
  path = NULL,  
  force = FALSE,  
  quiet = FALSE,  
  unzip = FALSE  
)
```

Arguments

| | |
|-------------|---|
| competition | the name of the competition |
| path | a path to download the file to |
| force | force the download if the file already exists (default FALSE) |
| quiet | suppress verbose output (default is TRUE) |
| unzip | unzip downloaded files |

Value

None

competition_leaderboard_download
Competition leaderboard download

Description

Download competition leaderboards

Usage

```
competition_leaderboard_download(competition, path, quiet = TRUE)
```

Arguments

| | |
|-------------|---|
| competition | the name of the competition |
| path | a path to download the file to |
| quiet | suppress verbose output (default is TRUE) |

Value

data frame

competition_list_files
Competition list files

Description

list files for competition

Usage

```
competition_list_files(competition)
```

Arguments

| | |
|-------------|-----------------------------|
| competition | the name of the competition |
|-------------|-----------------------------|

Value

list of files

Examples

```
## Not run:

com_nm = 'titanic'
titanic_files = competition_list_files(com_nm)

## End(Not run)
```

| | |
|--------------------|---------------------------|
| competition_submit | <i>Competition submit</i> |
|--------------------|---------------------------|

Description

Competition submit

Usage

```
competition_submit(file_name, message, competition, quiet = FALSE)
```

Arguments

| | |
|-------------|--|
| file_name | the competition metadata file |
| message | the submission description |
| competition | the competition name |
| quiet | suppress verbose output (default is FALSE) |

Value

None

| | |
|----------|-----------------|
| Contrast | <i>Contrast</i> |
|----------|-----------------|

Description

Apply change in contrast of 'max_lighting' to batch of images with probability 'p'.

Usage

```
Contrast(max_lighting = 0.2, p = 0.75, draw = NULL, batch = FALSE)
```

Arguments

| | |
|--------------|------------------|
| max_lighting | maximum lighting |
| p | probability |
| draw | draw |
| batch | batch |

Value

None

ConvLayer

*ConvLayer***Description**

Create a sequence of convolutional ('ni' to 'nf'), ReLU (if 'use_activ') and 'norm_type' layers.

Usage

```
ConvLayer(
  ni,
  nf,
  ks = 3,
  stride = 1,
  padding = NULL,
  bias = NULL,
  ndim = 2,
  norm_type = 1,
  bn_1st = TRUE,
  act_cls = nn()$ReLU,
  transpose = FALSE,
  init = "auto",
  xtra = NULL,
  bias_std = 0.01,
  dilation = 1,
  groups = 1,
  padding_mode = "zeros"
)
```

Arguments

| | |
|--------|-----------------------------|
| ni | number of inputs |
| nf | outputs/ number of features |
| ks | kernel size |
| stride | stride |

| | |
|--------------|--|
| padding | padding |
| bias | bias |
| ndim | dimension number |
| norm_type | normalization type |
| bn_1st | batch normalization 1st |
| act_cls | activation |
| transpose | transpose |
| init | initializer |
| xtra | xtra |
| bias_std | bias standard deviation |
| dilation | specify the dilation rate to use for dilated convolution |
| groups | groups size |
| padding_mode | padding mode, e.g 'zeros' |

Value

None

| | |
|-----------------|------------------------|
| convT_norm_relu | <i>ConvT_norm_relu</i> |
|-----------------|------------------------|

Description

ConvT_norm_relu

Usage

convT_norm_relu(ch_in, ch_out, norm_layer, ks = 3, stride = 2, bias = TRUE)

Arguments

| | |
|------------|---------------------|
| ch_in | input |
| ch_out | output |
| norm_layer | normalziation layer |
| ks | kernel size |
| stride | stride size |
| bias | bias true or not |

Value

None

`conv_norm_lr`*Conv_norm_lr*

Description

Conv_norm_lr

Usage

```
conv_norm_lr(  
  ch_in,  
  ch_out,  
  norm_layer = NULL,  
  ks = 3,  
  bias = TRUE,  
  pad = 1,  
  stride = 1,  
  activ = TRUE,  
  slope = 0.2,  
  init = nn()$init$normal_,  
  init_gain = 0.02  
)
```

Arguments

| | |
|------------|---------------------|
| ch_in | input |
| ch_out | output |
| norm_layer | normalziation layer |
| ks | kernel size |
| bias | bias |
| pad | pad |
| stride | stride |
| activ | activation |
| slope | slope |
| init | initializer |
| init_gain | initializer gain |

Value

None

CorpusBLEUMetric *CorpusBLEUMetric*

Description

Blueprint for defining a metric

Usage

```
CorpusBLEUMetric(vocab_sz = 5000, axis = -1)
```

Arguments

| | |
|----------|----------|
| vocab_sz | vocab_sz |
| axis | axis |

Value

None

cos.fastai.torch_core.TensorMask
Cos

Description

Cos

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
cos(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

cosh.fastai.torch_core.TensorMask
Cosh

Description

Cosh

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
cosh(x)
```

Arguments

x tensor

Value

tensor

cosh_ *Cosh*

Description

Cosh

Usage

```
## S3 method for class 'torch.Tensor'  
cosh(x)
```

Arguments

x tensor

Value

tensor

| | |
|------|------------|
| cos_ | <i>Cos</i> |
|------|------------|

Description

Cos

Usage

```
## S3 method for class 'torch.Tensor'  
cos(x)
```

Arguments

x tensor

Value

tensor

| | |
|------|------------------------|
| crap | <i>Crappify module</i> |
|------|------------------------|

Description

Crappify module

Usage

```
crap()
```

Value

None

| | |
|------------|-------------------|
| crappifier | <i>Crappifier</i> |
|------------|-------------------|

Description

Crappifier

Usage

```
crappifier(path_lr, path_hr)
```

Arguments

| | |
|---------|-----------------------|
| path_lr | path from (origin) |
| path_hr | path to (destination) |

Value

None

Examples

```
## Not run:  
  
items = get_image_files(path_hr)  
parallel(crappifier(path_lr, path_hr), items)  
  
## End(Not run)
```

| | |
|-------------|--------------------|
| create_body | <i>Create_body</i> |
|-------------|--------------------|

Description

Cut off the body of a typically pretrained ‘arch’ as determined by ‘cut’

Usage

```
create_body(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

Examples

```
## Not run:

encoder = create_body(resnet34(), pretrained = TRUE)

## End(Not run)
```

| | |
|------------------|-------------------------|
| create_cnn_model | <i>Create_cnn_model</i> |
|------------------|-------------------------|

Description

Create custom convnet architecture using ‘arch’, ‘n_in’ and ‘n_out’

Usage

```
create_cnn_model(
  arch,
  n_out,
  cut = NULL,
  pretrained = TRUE,
  n_in = 3,
  init = nn()$init$kaiming_normal_,
  custom_head = NULL,
  concat_pool = TRUE,
  lin_ftns = NULL,
  ps = 0.5,
  bn_final = FALSE,
  lin_first = FALSE,
  y_range = NULL
)
```

Arguments

| | |
|------------|-------------------------|
| arch | a model architecture |
| n_out | number of outs |
| cut | cut |
| pretrained | pretrained model or not |
| n_in | input shape |

| | |
|-------------|---------------------------|
| init | initializer |
| custom_head | custom head |
| concat_pool | concatenate pooling |
| lin_ftrs | linear filters |
| ps | parameter server |
| bn_final | batch normalization final |
| lin_first | linear first |
| y_range | y_range |

Value

None

| | |
|------------|-------------------|
| create_fcn | <i>Create_fcn</i> |
|------------|-------------------|

Description

A bunch of convolutions stacked together.

Usage

```
create_fcn(ni, nout, ks = 9, conv_sizes = c(128, 256, 128), stride = 1)
```

Arguments

| | |
|------------|--------------------------|
| ni | number of input channels |
| nout | output shape |
| ks | kernel size |
| conv_sizes | convolution sizes |
| stride | stride |

Value

model

| | |
|-------------|--------------------|
| create_head | <i>Create_head</i> |
|-------------|--------------------|

Description

Model head that takes 'nf' features, runs through 'lin_ftrs', and out 'n_out' classes.

Usage

```
create_head(  
    nf,  
    n_out,  
    lin_ftrs = NULL,  
    ps = 0.5,  
    concat_pool = TRUE,  
    bn_final = FALSE,  
    lin_first = FALSE,  
    y_range = NULL  
)
```

Arguments

| | |
|-------------|---------------------------|
| nf | number of features |
| n_out | number of out features |
| lin_ftrs | linear features |
| ps | parameter server |
| concat_pool | concatenate pooling |
| bn_final | batch normalization final |
| lin_first | linear first |
| y_range | y_range |

Value

None

| | |
|------------------|-------------------------|
| create_inception | <i>Create_inception</i> |
|------------------|-------------------------|

Description

Creates an InceptionTime arch from ‘ni’ channels to ‘nout’ outputs.

Usage

```
create_inception(
  ni,
  nout,
  kss = c(39, 19, 9),
  depth = 6,
  bottleneck_size = 32,
  nb_filters = 32,
  head = TRUE
)
```

Arguments

| | |
|-----------------|---|
| ni | number of input channels |
| nout | number of outputs, should be equal to the number of classes for classification tasks. |
| kss | kernel sizes for the inception Block. |
| depth | depth |
| bottleneck_size | The number of channels on the convolution bottleneck. |
| nb_filters | Channels on the convolution of each kernel. |
| head | TRUE if we want a head attached. |

Value

model

| | |
|------------|-------------------|
| create_mlp | <i>Create_mlp</i> |
|------------|-------------------|

Description

A simple model builder to create a bunch of BatchNorm1d, Dropout and Linear layers, with “act_fn” activations.

Usage

```
create_mlp(ni, nout, linear_sizes = c(500, 500, 500))
```

Arguments

| | |
|--------------|--------------------------|
| ni | number of input channels |
| nout | output shape |
| linear_sizes | linear output sizes |

Value

model

| | |
|---------------|----------------------|
| create_resnet | <i>Create_resnet</i> |
|---------------|----------------------|

Description

Basic 11 Layer - 1D resnet builder

Usage

```
create_resnet(  
  ni,  
  nout,  
  kss = c(9, 5, 3),  
  conv_sizes = c(64, 128, 128),  
  stride = 1  
)
```

Arguments

| | |
|------------|--------------------------|
| ni | number of input channels |
| nout | output shape |
| kss | kernel size |
| conv_sizes | convolution sizes |
| stride | stride |

Value

model

create_unet_model *Create_unet_model*

Description

Create custom unet architecture

Usage

```
create_unet_model(  
  arch,  
  n_out,  
  img_size,  
  pretrained = TRUE,  
  cut = NULL,  
  n_in = 3,  
  blur = FALSE,  
  blur_final = TRUE,  
  self_attention = FALSE,  
  y_range = NULL,  
  last_cross = TRUE,  
  bottle = FALSE,  
  act_cls = nn()$ReLU,  
  init = nn()$init$kaiming_normal_,  
  norm_type = NULL  
)
```

Arguments

| | |
|----------------|---|
| arch | architecture |
| n_out | number of out features |
| img_size | image shape |
| pretrained | pretrained or not |
| cut | cut |
| n_in | number of input |
| blur | blur is used to avoid checkerboard artifacts at each layer. |
| blur_final | blur final is specific to the last layer. |
| self_attention | self_attention determines if we use a self attention layer at the third block before the end. |
| y_range | If y_range is passed, the last activations go through a sigmoid rescaled to that range. |
| last_cross | last_cross |
| bottle | bottle |

| | |
|-----------|--------------------|
| act_cls | activation |
| init | initialzier |
| norm_type | normalization type |

Value

None

| | |
|---------|----------------|
| CropPad | <i>CropPad</i> |
|---------|----------------|

Description

Center crop or pad an image to 'size'

Usage

CropPad(size, pad_mode = "zeros", ...)

Arguments

| | |
|----------|----------------------|
| size | size |
| pad_mode | padding mode |
| ... | additional arguments |

Value

None

| | |
|----------|------------------|
| CropTime | <i>Crop Time</i> |
|----------|------------------|

Description

Random crops full spectrogram to be length specified in ms by crop_duration

Usage

CropTime(duration, pad_mode = AudioPadType()\$Zeros)

Arguments

| | |
|----------|--|
| duration | int, duration |
| pad_mode | padding mode, by default 'AudioPadType\$Zeros' |

Value

None

CrossEntropyLossFlat *CrossEntropyLossFlat*

Description

Same as ‘nn\$Module’, but no need for subclasses to call ‘super().__init__’

Usage

```
CrossEntropyLossFlat(...)
```

Arguments

... parameters to pass

Value

Loss object

CSVLogger *CSVLogger*

Description

Basic class handling tweaks of the training loop by changing a ‘Learner’ in various events

Usage

```
CSVLogger(fname = "history.csv", append = FALSE)
```

Arguments

fname file name
append append or not

Value

None

Examples

```
## Not run:

URLs_MNIST_SAMPLE()
# transformations
tfms = aug_transforms(do_flip = FALSE)
path = 'mnist_sample'
bs = 20

#load into memory
data = ImageDataLoaders_from_folder(path, batch_tfms = tfms, size = 26, bs = bs)

learn = cnn_learner(data, resnet18(), metrics = accuracy, path = getwd())

learn %>% fit_one_cycle(2, cbs = CSVLogger())

## End(Not run)
```

CudaCallback

CudaCallback

Description

Move data to CUDA device

Usage

```
CudaCallback(device = NULL)
```

Arguments

device device name

Value

None

| | |
|-------------|-----------------------|
| custom_loss | <i>Loss NN module</i> |
|-------------|-----------------------|

Description

Loss NN module

Usage

```
custom_loss()
```

Value

None

| | |
|--------|---------------|
| CutMix | <i>CutMix</i> |
|--------|---------------|

Description

Implementation of '<https://arxiv.org/abs/1905.04899>'

Usage

```
CutMix(alpha = 1)
```

Arguments

| | |
|-------|-------|
| alpha | alpha |
|-------|-------|

Value

None

| | |
|-----------------|------------------------|
| cutout_gaussian | <i>Cutout_gaussian</i> |
|-----------------|------------------------|

Description

Replace all 'areas' in 'x' with $N(0,1)$ noise

Usage

```
cutout_gaussian(x, areas)
```

Arguments

| | |
|-------|--------|
| x | tensor |
| areas | areas |

Value

None

| | |
|----------|-----------------|
| CycleGAN | <i>CycleGAN</i> |
|----------|-----------------|

Description

CycleGAN model.

Usage

```
CycleGAN(  
  ch_in = 3,  
  ch_out = 3,  
  n_features = 64,  
  disc_layers = 3,  
  gen_blocks = 9,  
  lsgan = TRUE,  
  drop = 0,  
  norm_layer = NULL  
)
```

Arguments

| | |
|-------------|----------------------|
| ch_in | input |
| ch_out | output |
| n_features | number of features |
| disc_layers | discriminator layers |
| gen_blocks | generator blocks |
| lsgan | ls gan |
| drop | dropout rate |
| norm_layer | normalziation layer |

Details

When called, takes in input batch of real images from both domains and outputs fake images for the opposite domains (with the generators). Also outputs identity images after passing the images into generators that outputs its domain type (needed for identity loss). Attributes: 'G_A' ('nn.Module'): takes real input B and generates fake input A 'G_B' ('nn.Module'): takes real input A and generates fake input B 'D_A' ('nn.Module'): trained to make the difference between real input A and fake input A 'D_B' ('nn.Module'): trained to make the difference between real input B and fake input B

Value

None

| | |
|--------------|---------------------|
| CycleGANLoss | <i>CycleGANLoss</i> |
|--------------|---------------------|

Description

CycleGAN loss function. The individual loss terms are also attributes of this class that are accessed by fastai for recording during training.

Usage

```
CycleGANLoss(cgan, l_A = 10, l_B = 10, l_idt = 0.5, lsgan = True)
```

Arguments

| | |
|-------|--|
| cgan | The CycleGAN model. |
| l_A | lambda_A, weight of domain A losses. (default=10) |
| l_B | lambda_B, weight of domain B losses. (default=10) |
| l_idt | lambda_idt, weight of identity losses. (default=0.5) |
| lsgan | Whether or not to use LSGAN objective (default=True) |

Details

Attributes: `'self.cgan'` (`'nn.Module'`): The CycleGAN model. `'self.l_A'` (`'float'`): `lambda_A`, weight of domain A losses. `'self.l_B'` (`'float'`): `lambda_B`, weight of domain B losses. `'self.l_idt'` (`'float'`): `lambda_idt`, weight of identity losses. `'self.crit'` (`'AdaptiveLoss'`): The adversarial loss function (either a BCE or MSE loss depending on `'lsgan'` argument) `'self.real_A'` and `'self.real_B'` (`'fastai.torch_core.TensorImage'`): Real images from domain A and B. `'self.id_loss_A'` (`'torch.FloatTensor'`): The identity loss for domain A calculated in the forward function `'self.id_loss_B'` (`'torch.FloatTensor'`): The identity loss for domain B calculated in the forward function `'self.gen_loss'` (`'torch.FloatTensor'`): The generator loss calculated in the forward function `'self.cyc_loss'` (`'torch.FloatTensor'`): The cyclic loss calculated in the forward function

CycleGANTrainer

CycleGANTrainer

Description

Learner Callback for training a CycleGAN model.

Usage

`CycleGANTrainer(...)`

Arguments

`...` parameters to pass

Value

None

cycle_learner

Cycle_learner

Description

Initialize and return a `'Learner'` object with the data in `'dls'`, CycleGAN model `'m'`, optimizer function `'opt_func'`, metrics `'metrics'`,

Usage

```

cycle_learner(
    dls,
    m,
    opt_func = Adam(),
    show_imgs = TRUE,
    imgA = TRUE,
    imgB = TRUE,
    show_img_interval = 10,
    ...
)

```

Arguments

| | |
|-------------------|---------------------------|
| dls | dataloader |
| m | CycleGAN model |
| opt_func | optimizer |
| show_imgs | show images |
| imgA | image a (from) |
| imgB | image B (to) |
| show_img_interval | show images interval rafe |
| ... | additional arguments |

Details

and callbacks ‘cbs’. Additionally, if ‘show_imgs’ is TRUE, it will show intermediate predictions during training. It will show domain B-to-A predictions if ‘imgA’ is TRUE and/or domain A-to-B predictions if ‘imgB’ is TRUE. Additionally, it will show images every ‘show_img_interval’ epochs. ‘Other ‘Learner’ arguments can be passed as well.

Value

None

DataBlock

DataBlock

Description

Generic container to quickly build ‘Datasets’ and ‘DataLoaders’

Usage

```
DataBlock(
    blocks = NULL,
    dl_type = NULL,
    getters = NULL,
    n_inp = NULL,
    item_tfms = NULL,
    batch_tfms = NULL,
    ...
)
```

Arguments

| | |
|------------|---|
| blocks | input blocks |
| dl_type | DL application |
| getters | how to get dataet |
| n_inp | n_inp is the number of elements in the tuples that should be considered part of the input and will default to 1 if tfms consists of one set of transforms |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| ... | additional parameters to pass |

Value

Block object

| | |
|-------------|------------------------------------|
| dataloaders | <i>Dataloaders from dls object</i> |
|-------------|------------------------------------|

Description

Create a 'DataLoaders' object from 'source'

Usage

```
dataloaders(object, ...)
```

Arguments

| | |
|--------|-------------------------------|
| object | model |
| ... | additional parameters to pass |

Examples

```
## Not run:

dls = TabularDataTable(df, procs, cat_names, cont_names,
  y_names = dep_var, splits = list(tr_idx, ts_idx) ) %>%
  dataloaders(bs = 50)

## End(Not run)
```

 Datasets

Datasets

Description

A dataset that creates a list from each ‘tfms’, passed thru ‘item_tfms’

Usage

```
Datasets(
  items = NULL,
  tfms = NULL,
  tls = NULL,
  n_inp = NULL,
  dl_type = NULL,
  use_list = NULL,
  do_setup = TRUE,
  split_idx = NULL,
  train_setup = TRUE,
  splits = NULL,
  types = NULL,
  verbose = FALSE
)
```

Arguments

| | |
|-----------|-----------------|
| items | items |
| tfms | transformations |
| tls | tls |
| n_inp | n_inp |
| dl_type | DL type |
| use_list | use list |
| do_setup | do setup |
| split_idx | split by index |

| | |
|-------------|-------------|
| train_setup | train setup |
| splits | splits |
| types | types |
| verbose | verbose |

Value

None

Data_Loaders
*Data Loaders***Description**

Data Loaders

Usage

Data_Loaders(...)

Arguments

... parameters to pass

Value

loader object

Examples

```
## Not run:

data = Data_Loaders(train_loader, test_loader)

learn = Learner(data, Net(), loss_func = F$nnl_loss,
                opt_func = Adam(), metrics = accuracy, cbs = CudaCallback())

learn %>% fit_one_cycle(1, 1e-2)

## End(Not run)
```

| | |
|---------|-------------------|
| dcmread | <i>Read dicom</i> |
|---------|-------------------|

Description

Open a 'DICOM' file

Usage

```
dcmread(fn, force = FALSE)
```

Arguments

| | |
|-------|----------------|
| fn | file name |
| force | logical, force |

Value

dicom object

Examples

```
## Not run:  
  
img = dcmread('hemorrhage.dcm')  
  
## End(Not run)
```

| | |
|--------|---------------|
| debias | <i>Debias</i> |
|--------|---------------|

Description

Debias

Usage

```
debias(mom, damp, step)
```

Arguments

| | |
|------|------|
| mom | mom |
| damp | damp |
| step | step |

Value

None

`Debugger`

*Debugger***Description**

A module to debug inside a model

Usage`Debugger(...)`**Arguments**

... parameters to pass

Value

None

`decision_plot`

*Decision_plot***Description**

Visualizes a model's decisions using cumulative SHAP values.

Usage`decision_plot(object, class_id = 0, row_idx = -1, dpi = 200, ...)`**Arguments**

| | |
|-----------------------|--|
| <code>object</code> | ShapInterpretation object |
| <code>class_id</code> | is used to indicate the class of interest for a classification model. It can either be an int or str representation for a class of choice. Each colored line in the plot represents the model's prediction for a single observation. |
| <code>row_idx</code> | If no index is passed in to use from the data, it will default to the first ten samples on the test set. Note:plotting too many samples at once can make the plot illegible. |
| <code>dpi</code> | dots per inch |
| ... | additional arguments |

Value

None

| | |
|--------------------|---------------------------|
| decode_spec_tokens | <i>Decode_spec_tokens</i> |
|--------------------|---------------------------|

Description

Decode the special tokens in 'tokens'

Usage

```
decode_spec_tokens(tokens)
```

Arguments

| | |
|--------|--------|
| tokens | tokens |
|--------|--------|

Value

None

| | |
|---------------|----------------------|
| default_split | <i>Default_split</i> |
|---------------|----------------------|

Description

Default split of a model between body and head

Usage

```
default_split(m)
```

Arguments

| | |
|---|------------|
| m | parameters |
|---|------------|

Value

None

Delta

Delta

Description

Creates delta with order 1 and 2 from spectrogram and concatenate with the original

Usage

```
Delta(width = 9)
```

Arguments

```
width          int, width
```

Value

None

denormalize_imagenet *Denormalize_imagenet*

Description

Denormalize_imagenet

Usage

```
denormalize_imagenet(img)
```

Arguments

```
img           img
```

Value

None

densenet121

Densenet121

Description

Densenet121

Usage

```
densenet121(pretrained = FALSE, progress)
```

Arguments

Value

model

| | |
|---------------|------------------------|
| DenseResBlock | <i>Dense Res Block</i> |
|---------------|------------------------|

Description

Resnet block of 'nf' features. 'conv_kwargs' are passed to 'conv_layer'.

Usage

```
DenseResBlock(  
  nf,  
  norm_type = 1,  
  ks = 3,  
  stride = 1,  
  padding = NULL,  
  bias = NULL,  
  ndim = 2,  
  bn_1st = TRUE,  
  act_cls = nn()$ReLU,  
  transpose = FALSE,  
  init = "auto",  
  xtra = NULL,  
  bias_std = 0.01,  
  dilation = 1,  
  groups = 1,  
  padding_mode = "zeros"  
)
```

Arguments

| | |
|-----------|-------------------------|
| nf | number of features |
| norm_type | normalization type |
| ks | kernel size |
| stride | stride |
| padding | padding |
| bias | bias |
| ndim | number of dimensions |
| bn_1st | batch normalization 1st |
| act_cls | activation |
| transpose | transpose |
| init | initializer |
| xtra | xtra |
| bias_std | bias standard deviation |

| | |
|--------------|-----------------|
| dilation | dilation number |
| groups | groups number |
| padding_mode | padding mode |

Value

block

| | |
|-----------------|------------------------|
| dependence_plot | <i>Dependence_plot</i> |
|-----------------|------------------------|

Description

Plots the value of a variable on the x-axis and the SHAP value of the same variable on the y-axis. Accepts a class_id and variable_name.

Usage

```
dependence_plot(object, variable_name = "", class_id = 0, dpi = 200, ...)
```

Arguments

| | |
|---------------|---|
| object | ShapInterpretation object |
| variable_name | the name of the column |
| class_id | is used to indicate the class of interest for a classification model. It can either be an int or str representation for a class of choice. This plot shows how the model depends on the given variable. Vertical dispersion of the datapoints represent interaction effects. Gray ticks along the y-axis are datapoints where the variable's values were NaN. |
| dpi | dots per inch |
| ... | additional arguments |

Value

None

DeterministicDihedral *DeterministicDihedral*

Description

Apply a random dihedral transformation to a batch of images with a probability 'p'

Usage

```
DeterministicDihedral(  
  size = NULL,  
  mode = "bilinear",  
  pad_mode = "reflection",  
  align_corners = NULL  
)
```

Arguments

| | |
|---------------|---------------|
| size | size |
| mode | mode |
| pad_mode | padding mode |
| align_corners | align corners |

Value

None

DeterministicDraw *DeterministicDraw*

Description

DeterministicDraw

Usage

```
DeterministicDraw(vals)
```

Arguments

| | |
|------|--------|
| vals | values |
|------|--------|

Value

None

DeterministicFlip *DeterministicFlip*

Description

Flip the batch every other call

Usage

```
DeterministicFlip(
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  align_corners = TRUE,
  ...
)
```

Arguments

| | |
|---------------|--------------------|
| size | size |
| mode | mode |
| pad_mode | padding mode |
| align_corners | align corners |
| ... | parameters to pass |

Value

None

detuplify_pg *Detuplify_pg*

Description

Detuplify_pg

Usage

```
detuplify_pg(d)
```

Arguments

| | |
|---|---|
| d | d |
|---|---|

Value

None

| | |
|------|-------------------------|
| Dice | <i>Dice coefficient</i> |
|------|-------------------------|

Description

Dice coefficient metric for binary target in segmentation

Usage

```
Dice(axis = 1)
```

Arguments

| | |
|------|------|
| axis | axis |
|------|------|

Value

None

| | |
|-------|--------------------|
| Dicom | <i>Dicom class</i> |
|-------|--------------------|

Description

Dicom class

Usage

```
Dicom()
```

Value

None

| | |
|---------------|-----------------------------|
| dicom_windows | <i>Dicom_windows module</i> |
|---------------|-----------------------------|

Description

Dicom_windows module

Usage

```
dicom_windows()
```

Value

None

Dihedral

*Dihedral***Description**

Apply a random dihedral transformation to a batch of images with a probability ‘p’

Apply a random dihedral transformation to a batch of images with a probability ‘p’

Usage

```
Dihedral(
  p = 0.5,
  draw = NULL,
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  align_corners = NULL,
  batch = FALSE
)
```

```
Dihedral(
  p = 0.5,
  draw = NULL,
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  align_corners = NULL,
  batch = FALSE
)
```

Arguments

| | |
|---------------|---------------|
| p | probability |
| draw | draw |
| size | size |
| mode | mode |
| pad_mode | padding mode |
| align_corners | align corners |
| batch | batch |

Value

None

None

| | |
|--------------|---------------------|
| DihedralItem | <i>DihedralItem</i> |
|--------------|---------------------|

Description

Randomly flip with probability 'p'

Usage

```
DihedralItem(p = 1, nm = NULL, before_call = NULL)
```

Arguments

| | |
|-------------|-------------|
| p | probability |
| nm | nm |
| before_call | before call |

Value

None

| | |
|--------------|---------------------|
| dihedral_mat | <i>Dihedral_mat</i> |
|--------------|---------------------|

Description

Return a random dihedral matrix

Usage

```
dihedral_mat(x, p = 0.5, draw = NULL, batch = FALSE)
```

Arguments

| | |
|-------|-------------|
| x | tensor |
| p | probability |
| draw | draw |
| batch | batch |

Value

None

dim

Dim

Description

Dim

Usage

```
## S3 method for class 'torch.Tensor'  
dim(x)
```

Arguments

x tensor

Valuetensor

dim.fastai.torch_core.TensorMask

Dim

Description

Dim

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
dim(x)
```

Arguments

x tensor

Value

tensor

| | |
|---------------|----------------------|
| discriminator | <i>Discriminator</i> |
|---------------|----------------------|

Description

Discriminator

Usage

```
discriminator(  
    ch_in,  
    n_ftrs = 64,  
    n_layers = 3,  
    norm_layer = NULL,  
    sigmoid = FALSE  
)
```

Arguments

| | |
|------------|-------------------------------|
| ch_in | input |
| n_ftrs | number of filters |
| n_layers | number of layers |
| norm_layer | normalization layer |
| sigmoid | apply sigmoid function or not |

| | |
|-----|------------|
| div | <i>Div</i> |
|-----|------------|

Description

Div

Usage

```
## S3 method for class 'torch.Tensor'  
a / b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

DownmixMono

Downmix Mono

Description

Transform multichannel audios into single channel

Usage

```
DownmixMono(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|-----------|---------------------------|
| enc | encoder |
| dec | decoder |
| split_idx | split by index |
| order | order, by default is NULL |

Value

None

dropout_mask

Dropout_mask

Description

Return a dropout mask of the same type as 'x', size 'sz', with probability 'p' to cancel an element.

Usage

```
dropout_mask(x, sz, p)
```

Arguments

| | |
|----|----|
| x | x |
| sz | sz |
| p | p |

Value

None

 dummy_eval

Dummy_eval

Description

Evaluate 'm' on a dummy input of a certain 'size'

Usage

```
dummy_eval(m, size = list(64, 64))
```

Arguments

| | |
|------|-------------|
| m | m parameter |
| size | size |

Value

None

DynamicUnet

DynamicUnet

Description

Create a U-Net from a given architecture.

Usage

```
DynamicUnet(
  encoder,
  n_classes,
  img_size,
  blur = FALSE,
  blur_final = TRUE,
  self_attention = FALSE,
  y_range = NULL,
  last_cross = TRUE,
  bottle = FALSE,
  act_cls = nn()$ReLU,
  init = nn()$init$kaiming_normal_,
  norm_type = NULL
)
```

Arguments

| | |
|----------------|---|
| encoder | encoder |
| n_classes | number of classes |
| img_size | image size |
| blur | blur is used to avoid checkerboard artifacts at each layer. |
| blur_final | blur final is specific to the last layer. |
| self_attention | self_attention determines if we use a self attention layer at the third block before the end. |
| y_range | If y_range is passed, the last activations go through a sigmoid rescaled to that range. |
| last_cross | last cross |
| bottle | bottle |
| act_cls | activation |
| init | initializer |
| norm_type | normalization type |

Value

None

 EarlyStoppingCallback *EarlyStoppingCallback*

Description

EarlyStoppingCallback

Usage

EarlyStoppingCallback(...)

Arguments

... parameters to pass

Value

None

efficientdet_infer_dl *Efficientdet infer dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for inferring the model.

Usage

```
efficientdet_infer_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|---|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. **dataloader_kwargs : Keyword arguments that will be internally passed to a Pytorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |
| ... | additional arguments |

Value

None

efficientdet_learner *MaskRCNN learner*

Description

Fastai ‘Learner’ adapted for MaskRCNN.

Usage

```
efficientdet_learner(dls, model, cbs = NULL, ...)
```

Arguments

| | |
|-------|---|
| dls | ‘Sequence’ of ‘DataLoaders’ passed to the ‘Learner’. The first one will be used for training and the second for validation. |
| model | The model to train. |
| cbs | Optional ‘Sequence’ of callbacks. |
| ... | learner_kwargs: Keyword arguments that will be internally passed to ‘Learner’. |

Value

model

efficientdet_model *Efficientdet model*

Description

Creates the efficientdet model specified by ‘model_name’.

Usage

```
efficientdet_model(model_name, num_classes, img_size, pretrained = TRUE)
```

Arguments

| | |
|-------------|---|
| model_name | Specifies the model to create. For pretrained models, check [this](https://github.com/rwightman/efficientdet-pytorch#models) table. |
| num_classes | Number of classes of your dataset (including background). |
| img_size | Image size that will be fed to the model. Must be squared and divisible by 128. |
| pretrained | If TRUE, use a pretrained backbone (on COCO). |

Value

model

efficientdet_predict_dl
Efficientdet predict dataloader

Description

Efficientdet predict dataloader

Usage

```
efficientdet_predict_dl(model, infer_dl, show_pbar = TRUE)
```

Arguments

| | |
|-----------|-----------|
| model | model |
| infer_dl | infer_dl |
| show_pbar | show_pbar |

Value

None

efficientdet_train_dl *Efficientdet train dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
efficientdet_train_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

efficientdet_valid_dl *Efficientdet valid dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
efficientdet_valid_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

Embedding

Embedding

Description

Embedding layer with truncated normal initialization

Usage

```
Embedding(ni, nf)
```

Arguments

| | |
|----|------------------------------|
| ni | inputs |
| nf | outputs / number of features |

Value

None

EmbeddingDropout

EmbeddingDropout

Description

Apply dropout with probability 'embed_p' to an embedding layer 'emb'.

Usage

```
EmbeddingDropout(emb, embed_p)
```

Arguments

| | |
|---------|---------|
| emb | emb |
| embed_p | embed_p |

Value

None

| | |
|-------------|--------------------|
| emb_sz_rule | <i>Emb_sz_rule</i> |
|-------------|--------------------|

Description

Rule of thumb to pick embedding size corresponding to 'n_cat'

Usage

```
emb_sz_rule(n_cat)
```

Arguments

| | |
|-------|-------|
| n_cat | n_cat |
|-------|-------|

Value

None

| | |
|------------|-------------------|
| error_rate | <i>Error rate</i> |
|------------|-------------------|

Description

1 - 'accuracy'

Usage

```
error_rate(inp, targ, axis = -1)
```

Arguments

| | |
|------|------------------------------|
| inp | The predictions of the model |
| targ | The corresponding labels |
| axis | Axis |

Value

tensor

Examples

```
## Not run:

learn = cnn_learner(dls, resnet34(), metrics = error_rate)

## End(Not run)
```

| | |
|-----|------------|
| exp | <i>Exp</i> |
|-----|------------|

Description

Exp

Usage

```
## S3 method for class 'torch.Tensor'
exp(x)
```

Arguments

x tensor

Value

tensor

| | |
|----------------------------------|------------|
| exp.fastai.torch_core.TensorMask | <i>Exp</i> |
|----------------------------------|------------|

Description

Exp

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
exp(x)
```

Arguments

x tensor

Value

tensor

ExplainedVariance *Explained Variance*

Description

Explained variance between predictions and targets

Usage

```
ExplainedVariance(sample_weight = NULL)
```

Arguments

sample_weight sample_weight

Value

None

expm1 *Expm1*

Description

Expm1

Usage

```
## S3 method for class 'torch.Tensor'  
expm1(x)
```

Arguments

x tensor

Value

tensor

```
expm1.fastai.torch_core.TensorMask
```

Expm1

Description

Expm1

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
expm1(x)
```

Arguments

x tensor

Value

tensor

```
export_generator        Export_generator
```

Description

Export_generator

Usage

```
export_generator(
  learn,
  generator_name = "generator",
  path = ".",
  convert_to = "B"
)
```

Arguments

learn learner/model
generator_name generator name
path path (save dir)
convert_to convert to

Value

None

| | |
|-----------|------------------|
| exp_rmspe | <i>Exp_rmspe</i> |
|-----------|------------------|

Description

Root mean square percentage error of the exponential of predictions and targets

Usage

```
exp_rmspe(preds, targs)
```

Arguments

| | |
|-------|-------------|
| preds | predicitons |
| targs | targets |

Value

None

| | |
|---------|----------------|
| F1Score | <i>F1Score</i> |
|---------|----------------|

Description

F1 score for single-label classification problems

Usage

```
F1Score(
  axis = -1,
  labels = NULL,
  pos_label = 1,
  average = "binary",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

`F1ScoreMulti`*F1ScoreMulti*

Description

F1 score for multi-label classification problems

Usage

```
F1ScoreMulti(  
    thresh = 0.5,  
    sigmoid = TRUE,  
    labels = NULL,  
    pos_label = 1,  
    average = "macro",  
    sample_weight = NULL  
)
```

Arguments

| | |
|----------------------------|----------------------------|
| <code>thresh</code> | <code>thresh</code> |
| <code>sigmoid</code> | <code>sigmoid</code> |
| <code>labels</code> | <code>labels</code> |
| <code>pos_label</code> | <code>pos_label</code> |
| <code>average</code> | <code>average</code> |
| <code>sample_weight</code> | <code>sample_weight</code> |

Value

None

| | |
|----------------|-----------------------|
| fastai_version | <i>Fastai version</i> |
|----------------|-----------------------|

Description

Fastai version

Usage

```
fastai_version()
```

Value

None

| | |
|-----------|-------------------------|
| fastaudio | <i>Fastaudio module</i> |
|-----------|-------------------------|

Description

Fastaudio module

Usage

```
fastaudio()
```

Value

None

| | |
|----------------------|-------------------------------------|
| faster_rcnn_infer_dl | <i>Faster RCNN infer dataloader</i> |
|----------------------|-------------------------------------|

Description

A 'DataLoader' with a custom 'collate_fn' that batches items as required for inferring the model.

Usage

```
faster_rcnn_infer_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|---|
| dataset | Possibly a ‘Dataset‘ object, but more generally, any ‘Sequence‘ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. **dataloader_kwargs : Keyword arguments that will be internally passed to a Pytorch ‘DataLoader‘. The parameter ‘collate_fn‘ is already defined internally and cannot be passed here. |
| ... | additional arguments |

Value

None

faster_rcnn_learner *Faster RSNN learner*

Description

Fastai ‘Learner‘ adapted for Faster RCNN.

Usage

```
faster_rcnn_learner(dls, model, cbs = NULL, ...)
```

Arguments

| | |
|-------|---|
| dls | ‘Sequence‘ of ‘DataLoaders‘ passed to the ‘Learner‘. The first one will be used for training and the second for validation. |
| model | The model to train. |
| cbs | Optional ‘Sequence‘ of callbacks. |
| ... | learner_kwargs: Keyword arguments that will be internally passed to ‘Learner‘. |

Value

model

faster_rcnn_model *Faster RSNN model*

Description

FasterRCNN model implemented by torchvision.

Usage

```
faster_rcnn_model(
    num_classes,
    backbone = NULL,
    remove_internal_transforms = TRUE,
    pretrained = TRUE
)
```

Arguments

num_classes Number of classes.

backbone Backbone model to use. Defaults to a resnet50_fpn model.

remove_internal_transforms

The torchvision model internally applies transforms like resizing and normalization, but we already do this at the 'Dataset' level, so it's safe to remove those internal transforms.

pretrained Argument passed to 'fastercnn_resnet50_fpn' if 'backbone is NULL'. By default it is set to TRUE: this is generally used when training a new model (transfer learning). 'pretrained = FALSE' is used during inference (prediction) for cases where the users have their own pretrained weights. ****faster_rcnn_kwargs**: Keyword arguments that internally are going to be passed to 'torchvision.models.detection.faster_rcnn.FastRCNN'

Value

model

faster_rcnn_predict_dl

Faster RCNN predict dataloader

Description

Faster RCNN predict dataloader

Usage

```
faster_rcnn_predict_dl(model, infer_dl, show_pbar = TRUE)
```

Arguments

| | |
|-----------|-----------|
| model | model |
| infer_dl | infer_dl |
| show_pbar | show_pbar |

Value

None

faster_rcnn_train_dl *Faster RSNN train dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
faster_rcnn_train_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

faster_rcnn_valid_dl *Faster RSNN valid dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
faster_rcnn_valid_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

fastinf *Wandb module*

Description

Wandb module

Usage

```
fastinf()
```

Value

None

| | |
|------------|-------------------|
| fa_collate | <i>Fa_collate</i> |
|------------|-------------------|

Description

Fa_collate

Usage

fa_collate(t)

Arguments

t text

Value

None

| | |
|------------|-------------------|
| fa_convert | <i>Da_convert</i> |
|------------|-------------------|

Description

Da_convert

Usage

fa_convert(t)

Arguments

t text

Value

None

FBeta

FBeta

Description

FBeta score with ‘beta’ for single-label classification problems

Usage

```
FBeta(  
  beta,  
  axis = -1,  
  labels = NULL,  
  pos_label = 1,  
  average = "binary",  
  sample_weight = NULL  
)
```

Arguments

| | |
|---------------|---------------|
| beta | beta |
| axis | axis |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

FBetaMulti

FBetaMulti

Description

FBeta score with ‘beta’ for multi-label classification problems

Usage

```
FBetaMulti(
  beta,
  thresh = 0.5,
  sigmoid = TRUE,
  labels = NULL,
  pos_label = 1,
  average = "macro",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| beta | beta |
| thresh | thresh |
| sigmoid | sigmoid |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

| | |
|--------------------|---------------------------|
| FetchPredsCallback | <i>FetchPredsCallback</i> |
|--------------------|---------------------------|

Description

A callback to fetch predictions during the training loop

Usage

```
FetchPredsCallback(
  ds_idx = 1,
  dl = NULL,
  with_input = FALSE,
  with_decoded = FALSE,
  cbs = NULL,
  reorder = TRUE
)
```

Arguments

| | |
|--------------|---------------------|
| ds_idx | dataset index |
| dl | DL application |
| with_input | with input or not |
| with_decoded | with decoded or not |
| cbs | callbacks |
| reorder | reorder or not |

Value

None

| | |
|--------------|----------------------|
| FileSplitter | <i>File Splitter</i> |
|--------------|----------------------|

Description

Split 'items' by providing file 'fname' (contains names of valid items separated by newline).

Usage

```
FileSplitter(fname)
```

Arguments

| | |
|-------|-----------|
| fname | file name |
|-------|-----------|

Value

None

| | |
|-------------|---------------------|
| FillMissing | <i>Fill Missing</i> |
|-------------|---------------------|

Description

Fill the missing values in continuous columns.

Usage

```
FillMissing(
  cat_names,
  cont_names,
  fill_strategy = FillStrategy_MEDIAN(),
  add_col = TRUE,
  fill_val = 0
)
```

Arguments

| | |
|---------------|--|
| cat_names | The names of the categorical variables |
| cont_names | The names of the continuous variables |
| fill_strategy | The strategy of filling |
| add_col | add_col |
| fill_val | fill_val |

Value

None

Examples

```
## Not run:  
  
procs = list(FillMissing(),Categorify(),Normalize())  
  
## End(Not run)
```

FillStrategy_COMMON *COMMON*

Description

An enumeration.

Usage

```
FillStrategy_COMMON()
```

Value

None

FillStrategy_CONSTANT *CONSTANT*

Description

An enumeration.

Usage

FillStrategy_CONSTANT()

Value

None

FillStrategy_MEDIAN *MEDIAN*

Description

An enumeration.

Usage

FillStrategy_MEDIAN()

Value

None

find_coeffs *Find_coeffs*

Description

Find coefficients for warp tfm from 'p1' to 'p2'

Usage

find_coeffs(p1, p2)

Arguments

| | |
|----|----------------|
| p1 | coefficient p1 |
| p2 | coefficient p2 |

Value

None

`fine_tune`

Fine_tune

Description

Fine tune with 'freeze' for 'freeze_epochs' then with 'unfreeze' from 'epochs' using discriminative LR

Usage

```

fine_tune(
    object,
    epochs,
    base_lr = 0.002,
    freeze_epochs = 1,
    lr_mult = 100,
    pct_start = 0.3,
    div = 5,
    ...
)

```

Arguments

| | |
|----------------------------|------------------------|
| <code>object</code> | learner/model |
| <code>epochs</code> | epoch number |
| <code>base_lr</code> | base learning rate |
| <code>freeze_epochs</code> | freeze epochs number |
| <code>lr_mult</code> | learning rate multiply |
| <code>pct_start</code> | start percentage |
| <code>div</code> | divide |
| <code>...</code> | additional arguments |

Value

None

```
fit.fastai.learner.Learner
    Fit
```

Description

Fit the model on this learner with 'lr' learning rate, 'wd' weight decay for 'epochs' with 'callbacks' as cbs argument.

Usage

```
## S3 method for class 'fastai.learner.Learner'
fit(object, ...)
```

Arguments

| | |
|--------|--------------------|
| object | a learner object |
| ... | parameters to pass |

Value

train history

```
fit.fastai.tabular.learner.TabularLearner
    Fit
```

Description

Fit the model on this learner with 'lr' learning rate, 'wd' weight decay for 'epochs' with 'callbacks'.

Usage

```
## S3 method for class 'fastai.tabular.learner.TabularLearner'
fit(object, ...)
```

Arguments

| | |
|--------|----------------------|
| object | model |
| ... | additional arguments |

Value

data frame

```
fit.fastai.vision.gan.GANLearner
    Fit
```

Description

Fit the model on this learner with 'lr' learning rate, 'wd' weight decay for 'epochs' with 'callbacks'.

Usage

```
## S3 method for class 'fastai.vision.gan.GANLearner'
fit(object, ...)
```

Arguments

| | |
|--------|-------------------------------|
| object | model |
| ... | additional parameters to pass |

Value

train history

Examples

```
## Not run:

learn %>% fit(1, 2e-4, wd = 0)

## End(Not run)
```

```
fit_flat_cos    Fit_flat_cos
```

Description

Fit_flat_cos

Usage

```
fit_flat_cos(
    object,
    n_epoch,
    lr = NULL,
    div_final = 1e+05,
    pct_start = 0.75,
    wd = NULL,
    cbs = NULL,
    reset_opt = FALSE
)
```

Arguments

| | |
|-----------|--------------------|
| object | learner/model |
| n_epoch | number of epochs |
| lr | learning rate |
| div_final | divide final value |
| pct_start | start percentage |
| wd | weight decay |
| cbs | callbacks |
| reset_opt | reset optimizer |

Value

None

| | |
|--------------|---------------------|
| fit_flat_lin | <i>Fit_flat_lin</i> |
|--------------|---------------------|

Description

Fit 'self.model' for 'n_epoch' at flat 'start_lr' before 'curve_type' annealing to 'end_lr' with weight decay of 'wd' and callbacks 'cbs'.

Usage

```
fit_flat_lin(
    object,
    n_epochs = 100,
    n_epochs_decay = 100,
    start_lr = NULL,
    end_lr = 0,
    curve_type = "linear",
    wd = NULL,
```

```

    cbs = NULL,
    reset_opt = FALSE
)

```

Arguments

| | |
|----------------|--|
| object | model / learner |
| n_epochs | number of epochs |
| n_epochs_decay | number of epochs with decay |
| start_lr | Desired starting learning rate, used for beginning pct of training. |
| end_lr | Desired end learning rate, training will conclude at this learning rate. |
| curve_type | Curve type for learning rate annealing. Options are 'linear', 'cosine', and 'exponential'. |
| wd | weight decay |
| cbs | callbacks |
| reset_opt | reset optimizer |

Value

None

| | |
|---------------|----------------------|
| fit_one_cycle | <i>Fit one cycle</i> |
|---------------|----------------------|

Description

Fit one cycle

Usage

```
fit_one_cycle(object, ...)
```

Arguments

| | |
|--------|--|
| object | model |
| ... | parameters to pass, e.g. lr, n_epoch, wd, and etc. |

Value

None

`fit_sgdr`*Fit_sgdr*

Description

Fit_sgdr

Usage

```
fit_sgdr(  
  object,  
  n_cycles,  
  cycle_len,  
  lr_max = NULL,  
  cycle_mult = 2,  
  cbs = NULL,  
  reset_opt = FALSE,  
  wd = NULL  
)
```

Arguments

| | |
|-------------------------|-----------------------|
| <code>object</code> | learner/model |
| <code>n_cycles</code> | number of cycles |
| <code>cycle_len</code> | length of cycle |
| <code>lr_max</code> | maximum learning rate |
| <code>cycle_mult</code> | cycle mult |
| <code>cbs</code> | callbacks |
| <code>reset_opt</code> | reset optimizer |
| <code>wd</code> | weight decay |

Value

None

| | |
|------------------|---------------------------|
| FixedGANSwitcher | <i>Fixed GAN Switcher</i> |
|------------------|---------------------------|

Description

Switcher to do 'n_crit' iterations of the critic then 'n_gen' iterations of the generator.

Usage

```
FixedGANSwitcher(n_crit = 1, n_gen = 1)
```

Arguments

| | |
|--------|-------------------------|
| n_crit | number of discriminator |
| n_gen | number of generator |

Value

None

| | |
|---------|----------------|
| fix_fit | <i>Fix fit</i> |
|---------|----------------|

Description

Fix fit

Usage

```
fix_fit(disable_graph = FALSE)
```

Arguments

| | |
|---------------|---|
| disable_graph | to remove dynamic plot, by default is FALSE |
|---------------|---|

Value

None

`fix_html`*Fix_html*

Description

Various messy things we've seen in documents

Usage

```
fix_html(x)
```

Arguments

`x` `text`

Value

string

`Flatten`*Flatten*

Description

Flatten 'x' to a single dimension, e.g. at end of a model. 'full' for rank-1 tensor

Usage

```
Flatten(full = FALSE)
```

Arguments

`full` `bool, full or not`

| | |
|---------------|----------------------|
| flatten_check | <i>Flatten check</i> |
|---------------|----------------------|

Description

Check that 'out' and 'targ' have the same number of elements and flatten them.

Usage

```
flatten_check(inp, targ)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |

Value

tensor

| | |
|---------------|----------------------|
| flatten_model | <i>Flatten_model</i> |
|---------------|----------------------|

Description

Return the list of all submodules and parameters of 'm'

Usage

```
flatten_model(m)
```

Arguments

| | |
|---|------------|
| m | parameters |
|---|------------|

Value

None

 Flip

Flip

Description

Randomly flip a batch of images with a probability ‘p’

Usage

```
Flip(
  p = 0.5,
  draw = NULL,
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  align_corners = TRUE,
  batch = FALSE
)
```

Arguments

| | |
|---------------|---|
| p | probability |
| draw | draw |
| size | size of image |
| mode | mode |
| pad_mode | reflection, zeros, border as string parameter |
| align_corners | align corners or not |
| batch | batch or not |

Value

None

FlipItem

FlipItem

Description

Randomly flip with probability ‘p’

Usage

```
FlipItem(p = 0.5)
```

Arguments

p probability

Value

None

| | |
|----------|-----------------|
| flip_mat | <i>Flip_mat</i> |
|----------|-----------------|

Description

Return a random flip matrix

Usage

```
flip_mat(x, p = 0.5, draw = NULL, batch = FALSE)
```

Arguments

x tensor
 p probability
 draw draw
 batch batch

Value

None

| | |
|-------|------------------------|
| float | <i>Tensor to float</i> |
|-------|------------------------|

Description

Tensor to float

Usage

```
float(tensor)
```

Arguments

tensor tensor

Value

tensor

floor.fastai.torch_core.TensorMask
Floor

Description

Floor

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
floor(x)
```

Arguments

x tensor

Value

tensor

floor_ *Floor*

Description

Floor

Usage

```
## S3 method for class 'torch.Tensor'  
floor(x)
```

Arguments

x tensor

Value

tensor

floor_div

Floor divide

Description

Floor divide

Usage

```
## S3 method for class 'torch.Tensor'  
x %% y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

floor_mod

Floor mod

Description

Floor mod

Usage

```
## S3 method for class 'torch.Tensor'  
x %% y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

| | |
|---------|---------------|
| fmodule | <i>Module</i> |
|---------|---------------|

Description

Module

Usage

fmodule(...)

Arguments

... parameters to pass

Details

Decorator to create an nn()\$Module using f as forward method

Value

None

| | |
|---------------|----------------------|
| FolderDataset | <i>FolderDataset</i> |
|---------------|----------------------|

Description

A PyTorch Dataset class that can be created from a folder ‘path’ of images, for the sole purpose of inference. Optional ‘transforms’

Usage

FolderDataset(path, transforms = NULL)

Arguments

| | |
|------------|-----------------|
| path | path to dir |
| transforms | transformations |

Details

can be provided. Attributes: ‘self.files’: A list of the filenames in the folder. ‘self.totensor’: ‘torchvision.transforms.ToTensor’ transform. ‘self.transform’: The transforms passed in as ‘transforms’ to the constructor.

Value

None

| | |
|------------|-------------------|
| force_plot | <i>Force_plot</i> |
|------------|-------------------|

Description

Visualizes the SHAP values with an added force layout. Accepts a class_id which is used to indicate the class of interest for a classification model.

Usage

```
force_plot(object, class_id = 0, ...)
```

Arguments

| | |
|----------|---|
| object | ShapInterpretation object |
| class_id | Accepts a class_id which is used to indicate the class of interest for a classification model. It can either be an int or str representation for a class of choice. |
| ... | additional arguments |

Value

None

| | |
|----------------|----------------------------|
| foreground_acc | <i>Foreground accuracy</i> |
|----------------|----------------------------|

Description

Computes non-background accuracy for multiclass segmentation

Usage

```
foreground_acc(inp, targ, bkg_idx = 0, axis = 1)
```

Arguments

| | |
|---------|-------------|
| inp | predictions |
| targ | targets |
| bkg_idx | bkg_idx |
| axis | axis |

Value

None

| | |
|---------------|----------------------|
| ForgetMultGPU | <i>ForgetMultGPU</i> |
|---------------|----------------------|

Description

Wrapper around the CUDA kernels for the ForgetMult gate.

Usage

```
ForgetMultGPU(...)
```

Arguments

... parameters to pass

Value

None

| | |
|-----------------|------------------------|
| forget_mult_CPU | <i>Forget_mult_CPU</i> |
|-----------------|------------------------|

Description

ForgetMult gate applied to 'x' and 'f' on the CPU.

Usage

```
forget_mult_CPU(x, f, first_h = NULL, batch_first = TRUE, backward = FALSE)
```

Arguments

| | |
|-------------|-------------|
| x | x |
| f | f |
| first_h | first_h |
| batch_first | batch_first |
| backward | backward |

Value

None

| | |
|--------|-----------------------|
| freeze | <i>Freeze a model</i> |
|--------|-----------------------|

Description

Freeze a model

Usage

```
freeze(object, ...)
```

Arguments

| | |
|--------|-----------------------|
| object | A model |
| ... | Additional parameters |

Value

None

Examples

```
## Not run:
learnR %>% freeze()

## End(Not run)
```

| | |
|--------------|---------------------|
| FuncSplitter | <i>FuncSplitter</i> |
|--------------|---------------------|

Description

Split 'items' by result of 'func' ('TRUE' for validation, 'FALSE' for training set).

Usage

```
FuncSplitter(func)
```

Arguments

| | |
|------|----------|
| func | function |
|------|----------|

Value

None

`fView``View`

Description

Reshape x to size

Usage

```
fView(...)
```

Arguments

... parameters to pass

Value

None

`GANDiscriminativeLR``GAN Discriminative LR`

Description

‘Callback‘ that handles multiplying the learning rate by ‘mult_lr‘ for the critic.

Usage

```
GANDiscriminativeLR(mult_lr = 5)
```

Arguments

mult_lr mult learning rate

`GANLearner_from_learners`*GAN Learner from learners*

Description

Create a GAN from 'learn_gen' and 'learn_crit'.

Usage

```
GANLearner_from_learners(  
    gen_learn,  
    crit_learn,  
    switcher = NULL,  
    weights_gen = NULL,  
    gen_first = FALSE,  
    switch_eval = TRUE,  
    show_img = TRUE,  
    clip = NULL,  
    cbs = NULL,  
    metrics = NULL,  
    loss_func = NULL,  
    opt_func = Adam(),  
    lr = 0.001,  
    splitter = trainable_params(),  
    path = NULL,  
    model_dir = "models",  
    wd = NULL,  
    wd_bn_bias = FALSE,  
    train_bn = TRUE,  
    moms = list(0.95, 0.85, 0.95)  
)
```

Arguments

| | |
|--------------------------|---|
| <code>gen_learn</code> | generator learner |
| <code>crit_learn</code> | discriminator learner |
| <code>switcher</code> | switcher |
| <code>weights_gen</code> | weights generator |
| <code>gen_first</code> | generator first |
| <code>switch_eval</code> | switch evaluation |
| <code>show_img</code> | show image or not |
| <code>clip</code> | clip value |
| <code>cbs</code> | Cbs is one or a list of Callbacks to pass to the Learner. |

| | |
|------------|---|
| metrics | It is an optional list of metrics, that can be either functions or Metrics. |
| loss_func | loss function |
| opt_func | The function used to create the optimizer |
| lr | learning rate |
| splitter | It is a function that takes self.model and returns a list of parameter groups (or just one parameter group if there are no different parameter groups). |
| path | The folder where to work |
| model_dir | Path and model_dir are used to save and/or load models. |
| wd | It is the default weight decay used when training the model. |
| wd_bn_bias | It controls if weight decay is applied to BatchNorm layers and bias. |
| train_bn | It controls if BatchNorm layers are trained even when they are supposed to be frozen according to the splitter. |
| moms | The default momentums used in Learner\$fit_one_cycle. |

Value

None

| | |
|-----------------|-------------|
| GANLearner_wgan | <i>Wgan</i> |
|-----------------|-------------|

Description

Create a WGAN from 'data', 'generator' and 'critic'.

Usage

```
GANLearner_wgan(
  dls,
  generator,
  critic,
  switcher = NULL,
  clip = 0.01,
  switch_eval = FALSE,
  gen_first = FALSE,
  show_img = TRUE,
  cbs = NULL,
  metrics = NULL,
  opt_func = Adam(),
  lr = 0.001,
  splitter = trainable_params,
  path = NULL,
  model_dir = "models",
  wd = NULL,
```

```

    wd_bn_bias = FALSE,
    train_bn = TRUE,
    moms = list(0.95, 0.85, 0.95)
)

```

Arguments

| | |
|-------------|---|
| dls | dataloader |
| generator | generator |
| critic | critic |
| switcher | switcher |
| clip | clip value |
| switch_eval | switch evaluation |
| gen_first | generator first |
| show_img | show image or not |
| cbs | callbacks |
| metrics | metrics |
| opt_func | optimization function |
| lr | learning rate |
| splitter | splitter |
| path | path |
| model_dir | model directory |
| wd | weight decay |
| wd_bn_bias | weight decay bn bias |
| train_bn | It controls if BatchNorm layers are trained even when they are supposed to be frozen according to the splitter. |
| moms | momentums |

Value

None

Examples

```

## Not run:

learn = GANLearner_wgan(dls, generator, critic, opt_func = partial(Adam(), mom=0.))

## End(Not run)

```

`GANLoss`*GAN Loss*

Description

Wrapper around 'crit_loss_func' and 'gen_loss_func'

Usage

```
GANLoss(gen_loss_func, crit_loss_func, gan_model)
```

Arguments

| | |
|-----------------------------|-----------------------------|
| <code>gen_loss_func</code> | generator loss function |
| <code>crit_loss_func</code> | discriminator loss function |
| <code>gan_model</code> | GAN model |

Value

None

`GANModule`*GAN Module*

Description

Wrapper around a 'generator' and a 'critic' to create a GAN.

Usage

```
GANModule(generator = NULL, critic = NULL, gen_mode = FALSE)
```

Arguments

| | |
|------------------------|-----------------------|
| <code>generator</code> | generator |
| <code>critic</code> | critic |
| <code>gen_mode</code> | generator mode or not |

Value

None

GANTrainer

GAN Trainer

Description

Handles GAN Training.

Usage

```
GANTrainer(
    switch_eval = FALSE,
    clip = NULL,
    beta = 0.98,
    gen_first = FALSE,
    show_img = TRUE
)
```

Arguments

| | |
|-------------|-------------------|
| switch_eval | switch evaluation |
| clip | clip value |
| beta | beta parameter |
| gen_first | generator first |
| show_img | show image or not |

Value

None

gan_critic

Gan critic

Description

Critic to train a 'GAN'.

Usage

```
gan_critic(n_channels = 3, nf = 128, n_blocks = 3, p = 0.15)
```

Arguments

| | |
|------------|--------------------|
| n_channels | number of channels |
| nf | number of features |
| n_blocks | number of blocks |
| p | probability |

Value

GAN object

gan_loss_from_func *GAN loss from function*

Description

Define loss functions for a GAN from 'loss_gen' and 'loss_crit'.

Usage

```
gan_loss_from_func(loss_gen, loss_crit, weights_gen = NULL)
```

Arguments

| | |
|-------------|--------------------|
| loss_gen | generator loss |
| loss_crit | discriminator loss |
| weights_gen | weight generator |

Value

None

GatherPredsCallback *GatherPredsCallback*

Description

'Callback' that saves the predictions and targets, optionally 'with_loss'

Usage

```
GatherPredsCallback(  
  with_input = FALSE,  
  with_loss = FALSE,  
  save_preds = NULL,  
  save_targs = NULL,  
  concat_dim = 0  
)
```

Arguments

| | |
|------------|------------------------|
| with_input | include inputs or not |
| with_loss | include loss or not |
| save_preds | save predictions |
| save_targs | save targets/actuals |
| concat_dim | concatenate dimensions |

Value

None

| | |
|--------------|---------------------|
| gauss_blur2d | <i>Gauss_blur2d</i> |
|--------------|---------------------|

Description

Apply gaussian_blur2d kornia filter

Usage

gauss_blur2d(x, s)

Arguments

| | |
|---|--------|
| x | image |
| s | effect |

Value

None

| | |
|----------------|-----------------------|
| generate_noise | <i>Generate noise</i> |
|----------------|-----------------------|

Description

Generate noise

Usage

generate_noise(fn, size = 100)

Arguments

| | |
|------|----------|
| fn | path |
| size | the size |

Value

None

Examples

```
## Not run:  
generate_noise()  
  
## End(Not run)
```

| | |
|------------------------------|------------------------|
| <code>get_annotations</code> | <i>Get_annotations</i> |
|------------------------------|------------------------|

Description

Open a COCO style json in 'fname' and returns the lists of filenames (with maybe 'prefix') and labelled bboxes.

Usage

```
get_annotations(fname, prefix = NULL)
```

Arguments

| | |
|--------|-------------|
| fname | folder name |
| prefix | prefix |

Value

None

| | |
|-----------------|------------------------|
| get_audio_files | <i>Get_audio_files</i> |
|-----------------|------------------------|

Description

Get audio files in 'path' recursively, only in 'folders', if specified.

Usage

```
get_audio_files(path, recurse = TRUE, folders = NULL)
```

Arguments

| | |
|---------|------------------|
| path | path |
| recurse | recursive or not |
| folders | vector, folders |

Value

None

| | |
|----------|-----------------|
| get_bias | <i>Get_bias</i> |
|----------|-----------------|

Description

Bias for item or user (based on 'is_item') for all in 'arr'

Usage

```
get_bias(object, arr, is_item = TRUE, convert = TRUE)
```

Arguments

| | |
|---------|------------------|
| object | extract bias |
| arr | R data frame |
| is_item | logical, is item |
| convert | to R matrix |

Value

tensor

Examples

```
## Not run:  
  
movie_bias = learn %>% get_bias(top_movies, is_item = TRUE)  
  
## End(Not run)
```

get_c

Get_c

Description

Get_c

Usage

```
get_c(dls)
```

Arguments

dls dataloader object

Value

number of layers

Examples

```
## Not run:  
  
get_c(dls)  
  
## End(Not run)
```

get_confusion_matrix *Extract confusion matrix*

Description

Extract confusion matrix

Usage

```
get_confusion_matrix(object)
```

Arguments

object model

Value

matrix

Examples

```
## Not run:  
  
model %>% get_confusion_matrix()  
  
## End(Not run)
```

get_data_loaders *Get data loaders*

Description

Get data loaders

Usage

```
get_data_loaders(train_batch_size, val_batch_size)
```

Arguments

train_batch_size
 train dataset batch size
val_batch_size validation dataset batch size

Value

None

| | |
|----------------|-------------------------|
| get_dcm_matrix | <i>Get image matrix</i> |
|----------------|-------------------------|

Description

Get image matrix

Usage

```
get_dcm_matrix(img, type = "raw", scan = "", size = 50, convert = TRUE)
```

Arguments

| | |
|---------|--|
| img | dicom file |
| type | img transformation |
| scan | apply uniform or gaussian blur effects |
| size | size of image |
| convert | to R matrix or keep tensor |

Value

tensor

Examples

```
## Not run:  
  
img = dcmread('hemorrhage.dcm')  
img %>% get_dcm_matrix(type = 'raw')  
  
## End(Not run)
```

| | |
|-----------------|------------------------|
| get_dicom_files | <i>get_dicom_files</i> |
|-----------------|------------------------|

Description

Get dicom files in 'path' recursively, only in 'folders', if specified.

Usage

```
get_dicom_files(path, recurse = TRUE, folders = NULL)
```

Arguments

| | |
|---------|------------------|
| path | path to files |
| recurse | recursive or not |
| folders | folder names |

Value

lsit of files

Examples

```
## Not run:  
  
items = get_dicom_files("siim_small/train/")  
  
## End(Not run)
```

| | |
|---------|----------------|
| get_dls | <i>Get dls</i> |
|---------|----------------|

Description

Given image files from two domains ('pathA', 'pathB'), create 'DataLoaders' object.

Usage

```

get_dls(
    pathA,
    pathB,
    num_A = NULL,
    num_B = NULL,
    load_size = 512,
    crop_size = 256,
    bs = 4,
    num_workers = 2
)

```

Arguments

| | |
|-------------|----------------------|
| pathA | path A (from domain) |
| pathB | path B (to domain) |
| num_A | subset of A data |
| num_B | subset of B data |
| load_size | load size |
| crop_size | crop size |
| bs | batch size |
| num_workers | number of workers |

Details

Loading and randomly cropped sizes of 'load_size' and 'crop_size' are set to defaults of 512 and 256. Batch size is specified by 'bs' (default=4).

Value

None

get_emb_sz

Get_emb_sz

Description

Get default embedding size from 'TabularPreprocessor' 'proc' or the ones in 'sz_dict'

Usage

```
get_emb_sz(to, sz_dict = NULL)
```

Arguments

| | |
|---------|-----------------|
| to | to |
| sz_dict | dictionary size |

Value

None

| | |
|-----------|------------------|
| get_files | <i>Get_files</i> |
|-----------|------------------|

Description

Get all the files in 'path' with optional 'extensions', optionally with 'recurse', only in 'folders', if specified.

Usage

```
get_files(
    path,
    extensions = NULL,
    recurse = TRUE,
    folders = NULL,
    followlinks = TRUE
)
```

Arguments

| | |
|-------------|-------------|
| path | path |
| extensions | extensions |
| recurse | recurse |
| folders | folders |
| followlinks | followlinks |

Value

list

| | |
|----------|-----------------|
| get_grid | <i>Get_grid</i> |
|----------|-----------------|

Description

Return a grid of 'n' axes, 'rows' by 'cols'

Usage

```
get_grid(  
    n,  
    nrows = NULL,  
    ncols = NULL,  
    add_vert = 0,  
    figsize = NULL,  
    double = FALSE,  
    title = NULL,  
    return_fig = FALSE,  
    imsize = 3  
)
```

Arguments

| | |
|------------|----------------------|
| n | n |
| nrows | number of rows |
| ncols | number of columns |
| add_vert | add vertical |
| figsize | figure size |
| double | double |
| title | title |
| return_fig | return figure or not |
| imsize | image size |

Value

None

| | |
|----------------|-----------------------|
| get_hf_objects | <i>Get_hf_objects</i> |
|----------------|-----------------------|

Description

Returns the architecture (str), config (obj), tokenizer (obj), and model (obj) given at minimum a

Usage

```
get_hf_objects(...)
```

Arguments

... parameters to pass

Details

'pre-trained model name or path'. Specify a 'task' to ensure the right "AutoModelFor<task>" is used to create the model. Optionally, you can pass a config (obj), tokenizer (class), and/or model (class) (along with any related kwargs for each) to get as specific as you want w/r/t what huggingface objects are returned.

Value

None

| | |
|-----------------|------------------------|
| get_image_files | <i>Get image files</i> |
|-----------------|------------------------|

Description

Get image files in 'path' recursively, only in 'folders', if specified.

Usage

```
get_image_files(path, recurse = TRUE, folders = NULL)
```

Arguments

| | |
|---------|--------------------------|
| path | The folder where to work |
| recurse | recursive path |
| folders | folder names |

Value

None

Examples

```
## Not run:  
  
URLs_PETS()  
  
path = 'oxford-iiit-pet'  
  
path_img = 'oxford-iiit-pet/images'  
fnames = get_image_files(path_img)  
  
## End(Not run)
```

| | |
|--------------------|---------------------------|
| get_language_model | <i>Get_language_model</i> |
|--------------------|---------------------------|

Description

Create a language model from ‘arch’ and its ‘config’.

Usage

```
get_language_model(arch, vocab_sz, config = NULL, drop_mult = 1)
```

Arguments

| | |
|-----------|-----------|
| arch | arch |
| vocab_sz | vocab_sz |
| config | config |
| drop_mult | drop_mult |

Value

model

get_preds_cyclegan *Get_preds_cyclegan*

Description

A prediction function that takes the Learner object ‘learn’ with the trained model, the ‘test_path’ folder with the images to perform

Usage

```
get_preds_cyclegan(
    learn,
    test_path,
    pred_path,
    bs = 4,
    num_workers = 4,
    suffix = "tif"
)
```

Arguments

| | |
|-------------|-------------------|
| learn | learner/model |
| test_path | testdat path |
| pred_path | predict data path |
| bs | batch size |
| num_workers | number of workers |
| suffix | suffix |

Details

batch inference on, and the output folder ‘pred_path’ where the predictions will be saved, with a batch size ‘bs’, ‘num_workers’, and suffix of the prediction images ‘suffix’ (default=’png’).

get_text_classifier *Get_text_classifier*

Description

Create a text classifier from ‘arch’ and its ‘config’, maybe ‘pretrained’

Usage

```

get_text_classifier(
    arch,
    vocab_sz,
    n_class,
    seq_len = 72,
    config = NULL,
    drop_mult = 1,
    lin_ftrs = NULL,
    ps = NULL,
    pad_idx = 1,
    max_len = 1440,
    y_range = NULL
)

```

Arguments

| | |
|-----------|-----------|
| arch | arch |
| vocab_sz | vocab_sz |
| n_class | n_class |
| seq_len | seq_len |
| config | config |
| drop_mult | drop_mult |
| lin_ftrs | lin_ftrs |
| ps | ps |
| pad_idx | pad_idx |
| max_len | max_len |
| y_range | y_range |

Value

None

| | |
|----------------|-----------------------|
| get_text_files | <i>Get_text_files</i> |
|----------------|-----------------------|

Description

Get text files in 'path' recursively, only in 'folders', if specified.

Usage

```
get_text_files(path, recurse = TRUE, folders = NULL)
```

Arguments

| | |
|---------|---------|
| path | path |
| recurse | recurse |
| folders | folders |

Value

None

| | |
|-------------|--------------------|
| get_weights | <i>Get weights</i> |
|-------------|--------------------|

Description

Weight for item or user (based on 'is_item') for all in 'arr'

Usage

```
get_weights(object, arr, is_item = TRUE, convert = FALSE)
```

Arguments

| | |
|---------|------------------|
| object | extract weights |
| arr | R data frame |
| is_item | logical, is item |
| convert | to R matrix |

Value

tensor

Examples

```
## Not run:  
  
movie_w = learn %>% get_weights(top_movies, is_item = TRUE, convert = TRUE)  
  
## End(Not run)
```

GradientAccumulation *GradientAccumulation*

Description

Accumulate gradients before updating weights

Usage

```
GradientAccumulation(n_acc = 32)
```

Arguments

n_acc number of acc

Value

None

GrandparentSplitter *GrandparentSplitter*

Description

Split 'items' from the grand parent folder names ('train_name' and 'valid_name').

Usage

```
GrandparentSplitter(train_name = "train", valid_name = "valid")
```

Arguments

train_name train folder name
valid_name validation folder name

Value

None

grayscale

Grayscale

Description

Tensor to grayscale tensor. Uses the ITU-R 601-2 luma transform.

Usage

```
grayscale(x)
```

Arguments

x tensor

Value

None

greater

Greater

Description

Greater

Usage

```
## S3 method for class 'torch.Tensor'  
a > b
```

Arguments

a tensor

b tensor

Value

tensor

| | |
|------------------|-------------------------|
| greater_or_equal | <i>Greater or equal</i> |
|------------------|-------------------------|

Description

Greater or equal

Usage

```
## S3 method for class 'torch.Tensor'
a >= b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|-------------|--------------------|
| HammingLoss | <i>HammingLoss</i> |
|-------------|--------------------|

Description

Hamming loss for single-label classification problems
 Hamming loss for single-label classification problems

Usage

```
HammingLoss(axis = -1, sample_weight = NULL)
HammingLoss(axis = -1, sample_weight = NULL)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| sample_weight | sample_weight |

Value

Loss object
 None

| | |
|------------------|-------------------------|
| HammingLossMulti | <i>HammingLossMulti</i> |
|------------------|-------------------------|

Description

Hamming loss for multi-label classification problems

Usage

```
HammingLossMulti(
    thresh = 0.5,
    sigmoid = TRUE,
    labels = NULL,
    sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| thresh | threshold |
| sigmoid | sigmoid |
| labels | labels |
| sample_weight | sample_weight |

Value

Loss object

| | |
|------------|-------------------|
| has_params | <i>Has_params</i> |
|------------|-------------------|

Description

Check if 'm' has at least one parameter

Usage

```
has_params(m)
```

Arguments

| | |
|---|-------------|
| m | m parameter |
|---|-------------|

Value

None

| | |
|---------------|----------------------|
| has_pool_type | <i>Has_pool_type</i> |
|---------------|----------------------|

Description

Return 'TRUE' if 'm' is a pooling layer or has one in its children

Usage

has_pool_type(m)

Arguments

| | |
|---|------------|
| m | parameters |
|---|------------|

Value

None

| | |
|--------|---------------------------|
| helper | <i>BLURR_MODEL_HELPER</i> |
|--------|---------------------------|

Description

BLURR_MODEL_HELPER

Usage

helper()

Value

None

| | |
|------------------|-------------------------|
| HF_ARCHITECTURES | <i>HF_ARCHITECTURES</i> |
|------------------|-------------------------|

Description

An enumeration.

Usage

HF_ARCHITECTURES()

Value

None

| | |
|--------------|---------------------|
| HF_BaseInput | <i>HF_BaseInput</i> |
|--------------|---------------------|

Description

A HF_BaseInput object is returned from the decodes method of HF_BatchTransform as a mean to customize '@typedispatched' functions like DataLoaders.show_batch and Learner.show_results. It represents the "input_ids" of a huggingface sequence as a tensor with a show method that requires a huggingface tokenizer for proper display.

Usage

```
HF_BaseInput(...)
```

Arguments

```
...           parameters to pass
```

Value

```
None
```

| | |
|----------------------|-----------------------------|
| HF_BaseModelCallback | <i>HF_BaseModelCallback</i> |
|----------------------|-----------------------------|

Description

```
HF_BaseModelCallback
```

Usage

```
HF_BaseModelCallback(...)
```

Arguments

```
...           parameters to pass
```

Value

```
None
```

HF_BaseModelWrapper *HF_BaseModelWrapper*

Description

Same as 'nn.Module', but no need for subclasses to call 'super().__init__'

Usage

```
HF_BaseModelWrapper(  
    hf_model,  
    output_hidden_states = FALSE,  
    output_attentions = FALSE,  
    ...  
)
```

Arguments

| | |
|----------------------|------------------------------|
| hf_model | model |
| output_hidden_states | output hidden states |
| output_attentions | output attentions |
| ... | additional arguments to pass |

Value

None

HF_BeforeBatchTransform
HF_BeforeBatchTransform

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced as a byproduct of the tokenization process in the 'encodes' method.

Usage

```
HF_BeforeBatchTransform(
    hf_arch,
    hf_tokenizer,
    max_length = NULL,
    padding = TRUE,
    truncation = TRUE,
    is_split_into_words = FALSE,
    n_tok_inps = 1,
    ...
)
```

Arguments

| | |
|---------------------|----------------------|
| hf_arch | architecture |
| hf_tokenizer | tokenizer |
| max_length | maximum length |
| padding | padding or not |
| truncation | truncation or not |
| is_split_into_words | to split into words |
| n_tok_inps | number tok inputs |
| ... | additional arguments |

Value

None

HF_CausalLMBeforeBatchTransform

HF_CausalLMBeforeBatchTransform

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced

Usage

```
HF_CausalLMBeforeBatchTransform(
    hf_arch,
    hf_tokenizer,
    max_length = NULL,
    padding = TRUE,
    truncation = TRUE,
```

```

    is_split_into_words = FALSE,
    n_tok_inps = 1,
    ignore_token_id = -100,
    ...
)

```

Arguments

| | |
|---------------------|----------------------|
| hf_arch | architecture |
| hf_tokenizer | tokenizer |
| max_length | maximum length |
| padding | padding or not |
| truncation | truncation or not |
| is_split_into_words | to split into words |
| n_tok_inps | number tok inputs |
| ignore_token_id | ignore token id |
| ... | additional arguments |

Details

as a byproduct of the tokenization process in the ‘encodes’ method.

Value

None

| | |
|-----------------|---------------------|
| HF_load_dataset | <i>Load_dataset</i> |
|-----------------|---------------------|

Description

Load a dataset

Usage

```

HF_load_dataset(
  path,
  name = NULL,
  data_dir = NULL,
  data_files = NULL,
  split = NULL,
  cache_dir = NULL,
  features = NULL,
  download_config = NULL,
)

```

```

    download_mode = NULL,
    ignore_verifications = FALSE,
    save_infos = FALSE,
    script_version = NULL,
    ...
)

```

Arguments

| | |
|----------------------|-----------------------------|
| path | path |
| name | name |
| data_dir | dataset dir |
| data_files | dataset files |
| split | split |
| cache_dir | cache directory |
| features | features |
| download_config | download configuration |
| download_mode | download mode |
| ignore_verifications | ignore verifications or not |
| save_infos | save information or not |
| script_version | script version |
| ... | additional arguments |

Details

This method does the following under the hood: 1. Download and import in the library the dataset loading script from “path“ if it’s not already cached inside the library. Processing scripts are small python scripts that define the citation, info and format of the dataset, contain the URL to the original data files and the code to load examples from the original data files. You can find some of the scripts here: <https://github.com/huggingface/datasets/datasets> and easily upload yours to share them using the CLI “datasets-cli“. 2. Run the dataset loading script which will: * Download the dataset file from the original URL (see the script) if it’s not already downloaded and cached. * Process and cache the dataset in typed Arrow tables for caching. Arrow table are arbitrarily long, typed tables which can store nested objects and be mapped to numpy/pandas/python standard types. They can be directly access from drive, loaded in RAM or even streamed over the web. 3. Return a dataset build from the requested splits in “split“ (default: all).

Value

data frame

HF_QABatchTransform *HF_QABatchTransform*

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced

Usage

```
HF_QABatchTransform(  
    hf_arch,  
    hf_tokenizer,  
    max_length = NULL,  
    padding = TRUE,  
    truncation = TRUE,  
    is_split_into_words = FALSE,  
    n_tok_inps = 1,  
    hf_input_return_type = HF_QuestionAnswerInput(),  
    ...  
)
```

Arguments

| | |
|----------------------|----------------------------|
| hf_arch | architecture |
| hf_tokenizer | tokenizer |
| max_length | maximum length |
| padding | padding |
| truncation | truncation |
| is_split_into_words | to split into words or not |
| n_tok_inps | number of tok inputs |
| hf_input_return_type | input return type |
| ... | additional arguments |

Details

as a byproduct of the tokenization process in the ‘encodes’ method.

Value

None

HF_QABeforeBatchTransform

HF_QABeforeBatchTransform

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced

Usage

```
HF_QABeforeBatchTransform(  
    hf_arch,  
    hf_tokenizer,  
    max_length = NULL,  
    padding = TRUE,  
    truncation = TRUE,  
    is_split_into_words = FALSE,  
    n_tok_inps = 1,  
    ...  
)
```

Arguments

| | |
|---------------------|------------------------------|
| hf_arch | architecture |
| hf_tokenizer | tokenizer |
| max_length | maximum length |
| padding | padding or not |
| truncation | truncation or not |
| is_split_into_words | into split into words or not |
| n_tok_inps | number of tok inputs |
| ... | additional arguments |

Details

as a byproduct of the tokenization process in the ‘encodes’ method.

Value

None

HF_QstAndAnsModelCallback

HF_QstAndAnsModelCallback

Description

HF_QstAndAnsModelCallback

Usage

HF_QstAndAnsModelCallback(...)

Arguments

... parameters to pass

Value

None

HF_QuestionAnswerInput

HF_QuestionAnswerInput

Description

HF_QuestionAnswerInput

Usage

HF_QuestionAnswerInput(...)

Arguments

... parameters to apss

Value

None

| | |
|-------------|--------------------|
| hf_splitter | <i>Hf_splitter</i> |
|-------------|--------------------|

Description

Splits the huggingface model based on various model architecture conventions

Usage

```
hf_splitter(m)
```

Arguments

| | |
|---|------------|
| m | parameters |
|---|------------|

Value

None

| | |
|--------------------------------------|---|
| HF_SummarizationBeforeBatchTransform | <i>HF_SummarizationBeforeBatchTransform</i> |
|--------------------------------------|---|

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced as a byproduct of the tokenization process in the 'encodes' method.

Usage

```
HF_SummarizationBeforeBatchTransform(
    hf_arch,
    hf_tokenizer,
    max_length = NULL,
    padding = TRUE,
    truncation = TRUE,
    is_split_into_words = FALSE,
    n_tok_inps = 2,
    ignore_token_id = -100,
    ...
)
```

Arguments

| | |
|----------------------------------|----------------------|
| <code>hf_arch</code> | architecture |
| <code>hf_tokenizer</code> | tokenizer |
| <code>max_length</code> | maximum length |
| <code>padding</code> | padding or not |
| <code>truncation</code> | truncation or not |
| <code>is_split_into_words</code> | to split into words |
| <code>n_tok_inps</code> | number tok inputs |
| <code>ignore_token_id</code> | ignore token id |
| <code>...</code> | additional arguments |

Value

None

`HF_SummarizationInput` *HF_SummarizationInput*

Description

`HF_SummarizationInput`

Usage

`HF_SummarizationInput()`

Value

None

HF_SummarizationModelCallback

HF_SummarizationModelCallback

Description

Basic class handling tweaks of the training loop by changing a ‘Learner‘ in various events

Usage

```
HF_SummarizationModelCallback(
  rouge_metrics = c("rouge1", "rouge2", "rougeL"),
  ignore_token_id = -100,
  ...
)
```

Arguments

| | |
|-----------------|--------------------------|
| rouge_metrics | rouge metrics |
| ignore_token_id | integer, ignore token id |
| ... | additional arguments |

Value

None

HF_TASKS_ALL

HF_TASKS_ALL

Description

An enumeration.

Usage

```
HF_TASKS_ALL()
```

Value

None

| | |
|---------------|----------------------|
| HF_TASKS_AUTO | <i>HF_TASKS_AUTO</i> |
|---------------|----------------------|

Description

An enumeration.

Usage

```
HF_TASKS_AUTO()
```

Value

None

| | |
|---------------------------------|--|
| HF_Text2TextAfterBatchTransform | <i>HF_Text2TextAfterBatchTransform</i> |
|---------------------------------|--|

Description

Delegates ('__call__', 'decode', 'setup') to (`encodes`, `decodes`, `setups`) if 'split_idx' matches

Usage

```
HF_Text2TextAfterBatchTransform(
    hf_tokenizer,
    input_return_type = HF_BaseInput()
)
```

Arguments

| | |
|-------------------|-------------------|
| hf_tokenizer | tokenizer |
| input_return_type | input return type |

Value

None

HF_Text2TextBlock *HF_Text2TextBlock*

Description

A basic wrapper that links defaults transforms for the data block API

Usage

```
HF_Text2TextBlock(...)
```

Arguments

... parameters to pass

Value

None

HF_TextBlock *HF_TextBlock*

Description

A basic wrapper that links defaults transforms for the data block API

Usage

```
HF_TextBlock(...)
```

Arguments

... arguments to pass

Value

None

HF_TokenCategorize *HF_TokenCategorize*

Description

Reversible transform of a list of category string to ‘vocab’ id

Usage

```
HF_TokenCategorize(vocab = NULL, ignore_token = NULL, ignore_token_id = NULL)
```

Arguments

| | |
|-----------------|-----------------|
| vocab | vocabulary |
| ignore_token | ignore token |
| ignore_token_id | ignore token id |

Value

None

HF_TokenCategoryBlock *HF_TokenCategoryBlock*

Description

‘TransformBlock’ for single-label categorical targets

Usage

```
HF_TokenCategoryBlock(
  vocab = NULL,
  ignore_token = NULL,
  ignore_token_id = NULL
)
```

Arguments

| | |
|-----------------|-----------------|
| vocab | vocabulary |
| ignore_token | ignore token |
| ignore_token_id | ignore token id |

Value

None

HF-TokenClassBeforeBatchTransform

HF-TokenClassBeforeBatchTransform

Description

Handles everything you need to assemble a mini-batch of inputs and targets, as well as decode the dictionary produced

Usage

```
HF-TokenClassBeforeBatchTransform(
    hf_arch,
    hf_tokenizer,
    ignore_token_id = -100,
    max_length = NULL,
    padding = TRUE,
    truncation = TRUE,
    is_split_into_words = TRUE,
    n_tok_inps = 1,
    ...
)
```

Arguments

| | |
|---------------------|----------------------|
| hf_arch | architecture |
| hf_tokenizer | tokenizer |
| ignore_token_id | ignore token id |
| max_length | maximum length |
| padding | padding or not |
| truncation | truncation or not |
| is_split_into_words | to split into_words |
| n_tok_inps | number tok inputs |
| ... | additional arguments |

Details

as a byproduct of the tokenization process in the ‘encodes’ method.

Value

None

| | |
|--------------------|---------------------------|
| HF-TokenClassInput | <i>HF-TokenClassInput</i> |
|--------------------|---------------------------|

Description

HF-TokenClassInput

Usage

HF-TokenClassInput()

Value

None

| | |
|------------------------|-------------------------------|
| HF-TokenTensorCategory | <i>HF-TokenTensorCategory</i> |
|------------------------|-------------------------------|

Description

HF-TokenTensorCategory

Usage

HF-TokenTensorCategory()

Value

None

| | |
|------|-------------|
| Hook | <i>Hook</i> |
|------|-------------|

Description

Create a hook on 'm' with 'hook_func'.

Usage

```
Hook(
    m,
    hook_func,
    is_forward = TRUE,
    detach = TRUE,
    cpu = FALSE,
    gather = FALSE
)
```

Arguments

| | |
|------------|-------------------|
| m | m aparameter |
| hook_func | hook function |
| is_forward | is_forward or not |
| detach | detach or not |
| cpu | cpu or not |
| gather | gather or not |

Details

Hooks are functions you can attach to a particular layer in your model and that will be executed in the forward pass (for forward hooks) or backward pass (for backward hooks).

Value

None

HookCallback

HookCallback

Description

‘Callback‘ that can be used to register hooks on ‘modules‘

‘Callback‘ that can be used to register hooks on ‘modules‘

Usage

```
HookCallback(
    modules = NULL,
    every = NULL,
    remove_end = TRUE,
    is_forward = TRUE,
    detach = TRUE,
    cpu = TRUE
)
```

```

)

HookCallback(
    modules = NULL,
    every = NULL,
    remove_end = TRUE,
    is_forward = TRUE,
    detach = TRUE,
    cpu = TRUE
)

```

Arguments

| | |
|------------|-------------------|
| modules | modules |
| every | every |
| remove_end | remove_end or not |
| is_forward | is_forward or not |
| detach | detach or not |
| cpu | cpu or not |

Value

None
None

Hooks

Hooks

Description

Create several hooks on the modules in 'ms' with 'hook_func'.

Usage

```
Hooks(ms, hook_func, is_forward = TRUE, detach = TRUE, cpu = FALSE)
```

Arguments

| | |
|------------|-------------------|
| ms | ms parameter |
| hook_func | hook function |
| is_forward | is_forward or not |
| detach | detach or not |
| cpu | cpu or not |

Value

None

| | |
|-------------|--------------------|
| hook_output | <i>Hook_output</i> |
|-------------|--------------------|

Description

Return a 'Hook' that stores activations of 'module' in 'self\$.stored'

Usage

```
hook_output(module, detach = TRUE, cpu = FALSE, grad = FALSE)
```

Arguments

| | |
|--------|---------------|
| module | module |
| detach | detach or not |
| cpu | cpu or not |
| grad | grad or not |

Value

None

| | |
|--------------|---------------------|
| hook_outputs | <i>Hook_outputs</i> |
|--------------|---------------------|

Description

Return 'Hooks' that store activations of all 'modules' in 'self\$.stored'

Usage

```
hook_outputs(modules, detach = TRUE, cpu = FALSE, grad = FALSE)
```

Arguments

| | |
|---------|---------------|
| modules | modules |
| detach | detach or not |
| cpu | cpu or not |
| grad | grad or not |

Value

None

| | |
|---------|----------------|
| hsv2rgb | <i>Hsv2rgb</i> |
|---------|----------------|

Description

Converts a HSV image to an RGB image.

Usage

```
hsv2rgb(img)
```

Arguments

| | |
|-----|--------------|
| img | image object |
|-----|--------------|

Value

None

| | |
|-----|------------|
| Hue | <i>Hue</i> |
|-----|------------|

Description

Apply change in hue of 'max_hue' to batch of images with probability 'p'.

Usage

```
Hue(max_hue = 0.1, p = 0.75, draw = NULL, batch = FALSE)
```

Arguments

| | |
|---------|-------------|
| max_hue | maximum hue |
| p | probability |
| draw | draw |
| batch | batch |

Value

None

| | |
|-----|---------------------------|
| hug | <i>Transformer module</i> |
|-----|---------------------------|

Description

Transformer module

Usage

hug()

Value

None

| | |
|-----------|-------------------------|
| icevision | <i>Icevision module</i> |
|-----------|-------------------------|

Description

Icevision module

Usage

icevision()

Value

None

| | |
|-------------------|----------------|
| icevision_Adapter | <i>Adapter</i> |
|-------------------|----------------|

Description

Adapter that enables the use of albumentations transforms.

Usage

icevision_Adapter(tfms)

Arguments

tfms ‘Sequence’ of albumentation transforms.

Value

None

icevision_aug_tfms *Aug_tfms*

Description

Collection of useful augmentation transforms.

Usage

```
icevision_aug_tfms(
    size,
    presize = NULL,
    horizontal_flip = icevision_HorizontalFlip(always_apply = FALSE, p = 0.5),
    shift_scale_rotate = icevision_ShiftScaleRotate(always_apply = FALSE, p = 0.5,
        shift_limit_x = c(-0.0625, 0.0625), shift_limit_y = c(-0.0625, 0.0625), scale_limit =
        c(-0.1, 0.1), rotate_limit = c(-45, 45), interpolation = 1, border_mode = 4, value =
        NULL, mask_value = NULL),
    rgb_shift = icevision_RGBShift(always_apply = FALSE, p = 0.5, r_shift_limit = c(-20,
        20), g_shift_limit = c(-20, 20), b_shift_limit = c(-20, 20)),
    lightning = icevision_RandomBrightnessContrast(always_apply = FALSE, p = 0.5,
        brightness_limit = c(-0.2, 0.2), contrast_limit = c(-0.2, 0.2), brightness_by_max =
        TRUE),
    blur = icevision_Blur(always_apply = FALSE, p = 0.5, blur_limit = c(1, 3)),
    crop_fn = partial(icevision_RandomSizedBBBoxSafeCrop, p = 0.5),
    pad = partial(icevision_PadIfNeeded, border_mode = 0, value = list(124, 116, 104))
)
```

Arguments

| | |
|--------------------|--|
| size | The final size of the image. If an 'int' is given, the maximum size of the image is rescaled, maintaing aspect ratio. If a 'list' is given, the image is rescaled to have that exact size (height, width). |
| presize | presize |
| horizontal_flip | Flip around the y-axis. If 'NULL' this transform is not applied. |
| shift_scale_rotate | Randomly shift, scale, and rotate. If 'NULL' this transform is not applied. |
| rgb_shift | Randomly shift values for each channel of RGB image. If 'NULL' this transform is not applied. |
| lightning | Randomly changes Brightness and Contrast. If 'NULL' this transform is not applied. |
| blur | Randomly blur the image. If 'NULL' this transform is not applied. |
| crop_fn | Randomly crop the image. If 'NULL' this transform is not applied. Use 'partial' to saturate other parameters of the class. |
| pad | Pad the image to 'size', squaring the image if 'size' is an 'int'. If 'NULL' this transform is not applied. Use 'partial' to saturate other parameters of the class. |

Value

None

icevision_BasicIAATransform
BasicIAATransform

Description

BasicIAATransform

Usage

```
icevision_BasicIAATransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_BasicTransform
BasicTransform

Description

BasicTransform

Usage

```
icevision_BasicTransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

| | |
|----------------|-------------|
| icevision_Blur | <i>Blur</i> |
|----------------|-------------|

Description

Blur the input image using a random-sized kernel.

Usage

```
icevision_Blur(blur_limit = 7, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| blur_limit | blur_limit |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

| | |
|--------------------------|-----------------------|
| icevision_ChannelDropout | <i>ChannelDropout</i> |
|--------------------------|-----------------------|

Description

Randomly Drop Channels in the input Image.

Usage

```
icevision_ChannelDropout(  
    channel_drop_range = list(1, 1),  
    fill_value = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------------|--------------------|
| channel_drop_range | channel_drop_range |
| fill_value | fill_value |
| always_apply | always_apply |
| p | p |

Targets

image

Image types

uint8, uint16, unit32, float32

icevision_ChannelShuffle
ChannelShuffle

Description

Randomly rearrange channels of the input RGB image.

Usage

```
icevision_ChannelShuffle(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

| | |
|-----------------|--------------|
| icevision_CLAHE | <i>CLAHE</i> |
|-----------------|--------------|

Description

Apply Contrast Limited Adaptive Histogram Equalization to the input image.

Usage

```
icevision_CLAHE(
    clip_limit = 4,
    tile_grid_size = list(8, 8),
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|----------------|----------------|
| clip_limit | clip_limit |
| tile_grid_size | tile_grid_size |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8

| | |
|--------------------|-----------------|
| icevision_ClassMap | <i>ClassMap</i> |
|--------------------|-----------------|

Description

Utility class for mapping between class name and id.

Usage

```
icevision_ClassMap(classes, background = 0)
```

Arguments

| | |
|------------|------------|
| classes | classes |
| background | background |

Value

Python dictionary

```
icevision_CoarseDropout
    CoarseDropout
```

Description

CoarseDropout of the rectangular regions in the image.

Usage

```
icevision_CoarseDropout(
    max_holes = 8,
    max_height = 8,
    max_width = 8,
    min_holes = NULL,
    min_height = NULL,
    min_width = NULL,
    fill_value = 0,
    mask_fill_value = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|-----------------|-----------------|
| max_holes | max_holes |
| max_height | max_height |
| max_width | max_width |
| min_holes | min_holes |
| min_height | min_height |
| min_width | min_width |
| fill_value | fill_value |
| mask_fill_value | mask_fill_value |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask

Image types

uint8, float32

Reference

| <https://arxiv.org/abs/1708.04552> | <https://github.com/uoguelph-mlrg/Cutout/blob/master/util/cutout.py>
| <https://github.com/aleju/imgaug/blob/master/imgaug/augmenters/arithmetic.py>

icevision_ColorJitter *ColorJitter*

Description

Randomly changes the brightness, contrast, and saturation of an image. Compared to ColorJitter from torchvision,

Usage

```
icevision_ColorJitter(  
    brightness = 0.2,  
    contrast = 0.2,  
    saturation = 0.2,  
    hue = 0.2,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| brightness | brightness |
| contrast | contrast |
| saturation | saturation |
| hue | hue |
| always_apply | always_apply |
| p | p |

Details

this transform gives a little bit different results because Pillow (used in torchvision) and OpenCV (used in Albumentations) transform an image to HSV format by different formulas. Another difference - Pillow uses uint8 overflow, but we use value saturation.

Value

None

| | |
|-------------------|----------------|
| icevision_Compose | <i>Compose</i> |
|-------------------|----------------|

Description

Compose transforms and handle all transformations regarding bounding boxes

Usage

```
icevision_Compose(
    transforms,
    bbox_params = NULL,
    keypoint_params = NULL,
    additional_targets = NULL,
    p = 1
)
```

Arguments

| | |
|--------------------|--------------------|
| transforms | transforms |
| bbox_params | bbox_params |
| keypoint_params | keypoint_params |
| additional_targets | additional_targets |
| p | p |

Value

None

| | |
|----------------|-------------|
| icevision_Crop | <i>Crop</i> |
|----------------|-------------|

Description

Crop region from image.

Usage

```
icevision_Crop(
    x_min = 0,
    y_min = 0,
    x_max = 1024,
    y_max = 1024,
    always_apply = FALSE,
    p = 1
)
```

Arguments

| | |
|--------------|--------------|
| x_min | x_min |
| y_min | y_min |
| x_max | x_max |
| y_max | y_max |
| always_apply | always_apply |
| p | p |

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

| | |
|------------------------------------|---------------------------------|
| icevision_CropNonEmptyMaskIfExists | <i>CropNonEmptyMaskIfExists</i> |
|------------------------------------|---------------------------------|

Description

Crop area with mask if mask is non-empty, else make random crop.

Usage

```

icevision_CropNonEmptyMaskIfExists(
    height,
    width,
    ignore_values = NULL,
    ignore_channels = NULL,
    always_apply = FALSE,
    p = 1
)

```

Arguments

| | |
|-----------------|-----------------|
| height | height |
| width | width |
| ignore_values | ignore_values |
| ignore_channels | ignore_channels |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

| | |
|------------------|---------------|
| icevision_Cutout | <i>Cutout</i> |
|------------------|---------------|

Description

CoarseDropout of the square regions in the image.

Usage

```
icevision_Cutout(  
    num_holes = 8,  
    max_h_size = 8,  
    max_w_size = 8,  
    fill_value = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| num_holes | num_holes |
| max_h_size | max_h_size |
| max_w_size | max_w_size |
| fill_value | fill_value |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

Reference

| <https://arxiv.org/abs/1708.04552> | <https://github.com/uoguelph-mlrg/Cutout/blob/master/util/cutout.py>
| <https://github.com/aleju/imgaug/blob/master/imgaug/augmenters/arithmetic.py>

| | |
|-------------------|----------------|
| icevision_Dataset | <i>Dataset</i> |
|-------------------|----------------|

Description

Container for a list of records and transforms.

Usage

```
icevision_Dataset(records, tfm = NULL)
```

Arguments

| | |
|---------|--|
| records | A list of records. |
| tfm | Transforms to be applied to each item. |

Details

Steps each time an item is requested (normally via directly indexing the 'Dataset'): Grab a record from the internal list of records. Prepare the record (open the image, open the mask, add metadata). Apply transforms to the record.

Value

None

icevision_Dataset_from_images
Icevision Dataset from images

Description

Creates a 'Dataset' from a list of images.

Usage

```
icevision_Dataset_from_images(images, tfm = NULL, ...)
```

Arguments

| | |
|--------|--|
| images | 'Sequence' of images in memory (numpy arrays). |
| tfm | Transforms to be applied to each item. |
| ... | additional arguments |

Value

None

icevision_Downscale *Downscale*

Description

Decreases image quality by downscaling and upscaling back.

Usage

```
icevision_Downscale(  
    scale_min = 0.25,  
    scale_max = 0.25,  
    interpolation = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|---------------|--|
| scale_min | scale_min |
| scale_max | scale_max |
| interpolation | cv2 interpolation method. cv2.INTER_NEAREST by default |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_DualIAATransform
DualIAATransform

Description

Transform for segmentation task.

Usage

```
icevision_DualIAATransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_DualTransform
DualTransform

Description

Transform for segmentation task.

Usage

```
icevision_DualTransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_ElasticTransform
ElasticTransform

Description

Elastic deformation of images as described in [Simard2003]_ (with modifications).

Usage

```
icevision_ElasticTransform(  
    alpha = 1,  
    sigma = 50,  
    alpha_affine = 50,  
    interpolation = 1,  
    border_mode = 4,  
    value = NULL,  
    mask_value = NULL,  
    always_apply = FALSE,  
    approximate = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|---------------|---------------|
| alpha | alpha |
| sigma | sigma |
| alpha_affine | alpha_affine |
| interpolation | interpolation |
| border_mode | border_mode |
| value | value |
| mask_value | mask_value |
| always_apply | always_apply |
| approximate | approximate |
| p | p |

Details

Based on <https://gist.github.com/erniejunior/601cdf56d2b424757de5> .. [Simard2003] Simard, Steinkraus and Platt, "Best Practices for Convolutional Neural Networks applied to Visual Document Analysis", in Proc. of the International Conference on Document Analysis and Recognition, 2003.

Value

None

Targets

image, mask

Image types

uint8, float32

icevision_Equalize *Equalize*

Description

Equalize the image histogram.

Usage

```
icevision_Equalize(mode = "cv", by_channels = TRUE, mask = NULL, ...)
```

Arguments

| | |
|-------------|----------------------|
| mode | mode |
| by_channels | by_channels |
| mask | mask |
| ... | additional arguments |

Value

None

Targets

image

Image types

uint8

| | |
|--------------------|-----------------|
| icevision_FancyPCA | <i>FancyPCA</i> |
|--------------------|-----------------|

Description

Augment RGB image using FancyPCA from Krizhevsky's paper

Usage

```
icevision_FancyPCA(alpha = 0.1, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| alpha | alpha |
| always_apply | always_apply |
| p | p |

Details

"ImageNet Classification with Deep Convolutional Neural Networks"

Value

None

Targets

image

Image types

3-channel uint8 images only

| | |
|---------------|-----|
| icevision_FDA | FDA |
|---------------|-----|

Description

Fourier Domain Adaptation from <https://github.com/YanchaoYang/FDA>

Usage

```
icevision_FDA(  
    reference_images,  
    beta_limit = 0.1,  
    read_fn = icevision_read_rgb_image(),  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|------------------|------------------|
| reference_images | reference_images |
| beta_limit | beta_limit |
| read_fn | read_fn |
| always_apply | always_apply |
| p | p |

Details

Simple "style transfer".

Value

None

Fourier Domain Adaptation from [https](https://github.com/YanchaoYang/FDA)

[//github.com/YanchaoYang/FDA](https://github.com/YanchaoYang/FDA): Simple "style transfer".

Targets

image

Image types

uint8, float32

Reference

<https://github.com/YanchaoYang/FDA> https://openaccess.thecvf.com/content_CVPR_2020/papers/Yang_FDA_Fourier_Dom

Example

```

>> import numpy as np >> import albumentations as A >> image = np.random.randint(0, 256, [100,
100, 3], dtype=np.uint8) >> target_image = np.random.randint(0, 256, [100, 100, 3], dtype=np.uint8)
>> aug = A.Compose([A.FDA([target_image], p=1, read_fn=lambda x: x)]) >> result = aug(image=image)

```

icevision_FixedSplitter
FixedSplitter

Description

Split 'ids' based on predefined splits.

Usage

```
icevision_FixedSplitter(splits)
```

Arguments

splits The predefined splits.

Value

None

icevision_Flip *Flip*

Description

Flip the input either horizontally, vertically or both horizontally and vertically.

Usage

```
icevision_Flip(always_apply = FALSE, p = 0.5)
```

Arguments

always_apply always_apply
p p

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

 icevision_FromFloat *FromFloat*

Description

Take an input array where all values should lie in the range [0, 1.0], multiply them by ‘max_value’ and then

Usage

```
icevision_FromFloat(
    dtype = "uint16",
    max_value = NULL,
    always_apply = FALSE,
    p = 1
)
```

Arguments

| | |
|--------------|--------------|
| dtype | dtype |
| max_value | max_value |
| always_apply | always_apply |
| p | p |

Details

cast the resulted value to a type specified by ‘dtype’. If ‘max_value’ is NULL the transform will try to infer the maximum value for the data type from the ‘dtype’ argument. This is the inverse transform for :class:~alumentations.augmentations.transforms.ToFloat’.

Value

None

Targets

image

Image types

float32

icevision_GaussianBlur
GaussianBlur

Description

Blur the input image using a Gaussian filter with a random kernel size.

Usage

```
icevision_GaussianBlur(  
    blur_limit = list(3, 7),  
    sigma_limit = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| blur_limit | blur_limit |
| sigma_limit | sigma_limit |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_GaussNoise *GaussNoise*

Description

Apply gaussian noise to the input image.

Usage

```
icevision_GaussNoise(  
    var_limit = list(10, 50),  
    mean = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| var_limit | var_limit |
| mean | mean |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_GlassBlur *GlassBlur*

Description

Apply glass noise to the input image.

Usage

```
icevision_GlassBlur(  
    sigma = 0.7,  
    max_delta = 4,  
    iterations = 2,  
    always_apply = False,  
    mode = "fast",  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| sigma | sigma |
| max_delta | max_delta |
| iterations | iterations |
| always_apply | always_apply |
| mode | mode |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

Reference

| <https://arxiv.org/abs/1903.12261> | https://github.com/hendrycks/robustness/blob/master/ImageNet-C/create_c/make_imagenet_c.py

icevision_GridDistortion

GridDistortion

Description

Args:

Usage

```
icevision_GridDistortion(
    num_steps = 5,
    distort_limit = 0.3,
    interpolation = 1,
    border_mode = 4,
    value = NULL,
    mask_value = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|---------------|---------------|
| num_steps | num_steps |
| distort_limit | distort_limit |
| interpolation | interpolation |
| border_mode | border_mode |
| value | value |
| mask_value | mask_value |
| always_apply | always_apply |
| p | p |

Details

num_steps (int): count of grid cells on each side. distort_limit (float, (float, float)): If distort_limit is a single float, the range will be (-distort_limit, distort_limit). Default: (-0.03, 0.03). interpolation (OpenCV flag): flag that is used to specify the interpolation algorithm. Should be one of: cv2.INTER_NEAREST, cv2.INTER_LINEAR, cv2.INTER_CUBIC, cv2.INTER_AREA, cv2.INTER_LANCZOS4. Default: cv2.INTER_LINEAR. border_mode (OpenCV flag): flag that is used to specify the pixel extrapolation method. Should be one of: cv2.BORDER_CONSTANT, cv2.BORDER_REPLICATE, cv2.BORDER_REFLECT, cv2.BORDER_WRAP, cv2.BORDER_REFLECT_101. Default: cv2.BORDER_REFLECT_101. value (int, float, list of ints, list of float): padding value if border_mode is cv2.BORDER_CONSTANT. mask_value (int, float, list of ints, list of float): padding value if border_mode is cv2.BORDER_CONSTANT applied for masks. Targets: image, mask Image types: uint8, float32

Value

None

Targets

image, mask

Image types

uint8, float32

 icevision_GridDropout *GridDropout*

Description

GridDropout, drops out rectangular regions of an image and the corresponding mask in a grid fashion.

Usage

```
icevision_GridDropout(
    ratio = 0.5,
    unit_size_min = NULL,
    unit_size_max = NULL,
    holes_number_x = NULL,
    holes_number_y = NULL,
    shift_x = 0,
    shift_y = 0,
    random_offset = FALSE,
    fill_value = 0,
    mask_fill_value = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|-----------------|-----------------|
| ratio | ratio |
| unit_size_min | unit_size_min |
| unit_size_max | unit_size_max |
| holes_number_x | holes_number_x |
| holes_number_y | holes_number_y |
| shift_x | shift_x |
| shift_y | shift_y |
| random_offset | random_offset |
| fill_value | fill_value |
| mask_fill_value | mask_fill_value |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask

Image types

uint8, float32

References

<https://arxiv.org/abs/2001.04086>

icevision_HistogramMatching

HistogramMatching

Description

Apply histogram matching. It manipulates the pixels of an input image so that its histogram matches

Usage

```
icevision_HistogramMatching(  
    reference_images,  
    blend_ratio = list(0.5, 1),  
    read_fn = icevision_read_rgb_image(),  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|------------------|------------------|
| reference_images | reference_images |
| blend_ratio | blend_ratio |
| read_fn | read_fn |
| always_apply | always_apply |
| p | p |

Details

the histogram of the reference image. If the images have multiple channels, the matching is done independently for each channel, as long as the number of channels is equal in the input image and the reference. Histogram matching can be used as a lightweight normalisation for image processing, such as feature matching, especially in circumstances where the images have been taken from different sources or in different conditions (i.e. lighting). See: https://scikit-image.org/docs/dev/auto_examples/color_exposure/plot_histogram_matching.html

Value

None

See

https://scikit-image.org/docs/dev/auto_examples/color_exposure/plot_histogram_matching.html

Targets

image

Image types

uint8, uint16, float32

icevision_HorizontalFlip
HorizontalFlip

Description

Flip the input horizontally around the y-axis.

Usage

```
icevision_HorizontalFlip(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

`icevision_HueSaturationValue`*HueSaturationValue*

Description

Randomly change hue, saturation and value of the input image.

Usage

```
icevision_HueSaturationValue(  
    hue_shift_limit = 20,  
    sat_shift_limit = 30,  
    val_shift_limit = 20,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|------------------------------|------------------------------|
| <code>hue_shift_limit</code> | <code>hue_shift_limit</code> |
| <code>sat_shift_limit</code> | <code>sat_shift_limit</code> |
| <code>val_shift_limit</code> | <code>val_shift_limit</code> |
| <code>always_apply</code> | <code>always_apply</code> |
| <code>p</code> | <code>p</code> |

Value

None

Targets

image

Image types

uint8, float32

icevision_IAAAdditiveGaussianNoise
IAAAdditiveGaussianNoise

Description

Add gaussian noise to the input image.

Usage

```
icevision_IAAAdditiveGaussianNoise(  
    loc = 0,  
    scale = list(2.55, 12.75),  
    per_channel = FALSE,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| loc | loc |
| scale | scale |
| per_channel | per_channel |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

icevision_IAAAffine *IAAAAffine*

Description

Place a regular grid of points on the input and randomly move the neighbourhood of these point around

Usage

```
icevision_IAAAffine(
    scale = 1,
    translate_percent = NULL,
    translate_px = NULL,
    rotate = 0,
    shear = 0,
    order = 1,
    cval = 0,
    mode = "reflect",
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|-------------------|-------------------|
| scale | scale |
| translate_percent | translate_percent |
| translate_px | translate_px |
| rotate | rotate |
| shear | shear |
| order | order |
| cval | cval |
| mode | mode |
| always_apply | always_apply |
| p | p |

Details

via affine transformations. Note: This class introduce interpolation artifacts to mask if it has values other than (0;1)

Value

None

None

Targets

image, mask

icevision_IAACropAndPad
IAACropAndPad

Description

Transform for segmentation task.

Usage

```
icevision_IAACropAndPad(  
    px = NULL,  
    percent = NULL,  
    pad_mode = "constant",  
    pad_cval = 0,  
    keep_size = TRUE,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

| | |
|--------------|--------------|
| px | px |
| percent | percent |
| pad_mode | pad_mode |
| pad_cval | pad_cval |
| keep_size | keep_size |
| always_apply | always_apply |
| p | p |

icevision_IAAEmboss *IAAEmboss*

Description

Emboss the input image and overlays the result with the original image.

Usage

```
icevision_IAAEmboss(  
    alpha = list(0.2, 0.5),  
    strength = list(0.2, 0.7),  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| alpha | alpha |
| strength | strength |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

icevision_IAAFliplr *IAAFliplr*

Description

Transform for segmentation task.

Usage

```
icevision_IAAFliplr(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_IAAFlipud *IAAFlipud*

Description

Transform for segmentation task.

Usage

```
icevision_IAAFlipud(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_IAAPerspective
IAAPerspective

Description

Perform a random four point perspective transform of the input.

Usage

```
icevision_IAAPerspective(  
  scale = list(0.05, 0.1),  
  keep_size = TRUE,  
  always_apply = FALSE,  
  p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| scale | scale |
| keep_size | keep_size |
| always_apply | always_apply |
| p | p |

Details

Note: This class introduce interpolation artifacts to mask if it has values other than (0;1)

Value

None

Targets

image, mask

```
icevision_IAPiecewiseAffine
    IAPiecewiseAffine
```

Description

Place a regular grid of points on the input and randomly move the neighbourhood of these point around

Usage

```
icevision_IAPiecewiseAffine(
    scale = list(0.03, 0.05),
    nb_rows = 4,
    nb_cols = 4,
    order = 1,
    cval = 0,
    mode = "constant",
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|--------------|--------------|
| scale | scale |
| nb_rows | nb_rows |
| nb_cols | nb_cols |
| order | order |
| cval | cval |
| mode | mode |
| always_apply | always_apply |
| p | p |

Details

via affine transformations. Note: This class introduce interpolation artifacts to mask if it has values other than (0;1)

Value

None

Targets

image, mask

icevision_IAASharpener *IAASharpener*

Description

Sharpen the input image and overlays the result with the original image.

Usage

```
icevision_IAASharpener(  
    alpha = list(0.2, 0.5),  
    lightness = list(0.5, 1),  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| alpha | alpha |
| lightness | lightness |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

icevision_IAASuperpixels
IAASuperpixels

Description

Completely or partially transform the input image to its superpixel representation. Uses skimage's version

Usage

```
icevision_IAASuperpixels(  
    p_replace = 0.1,  
    n_segments = 100,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| p_replace | p_replace |
| n_segments | n_segments |
| always_apply | always_apply |
| p | p |

Details

of the SLIC algorithm. May be slow.

Value

None

Targets

image

icevision_ImageCompression
ImageCompression

Description

Decrease Jpeg, WebP compression of an image.

Usage

```
icevision_ImageCompression(  
    quality_lower = 99,  
    quality_upper = 100,  
    compression_type = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|------------------|------------------|
| quality_lower | quality_lower |
| quality_upper | quality_upper |
| compression_type | compression_type |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_ImageOnlyIAATransform
ImageOnlyIAATransform

Description

Transform applied to image only.

Usage

```
icevision_ImageOnlyIAATransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_ImageOnlyTransform
ImageOnlyTransform

Description

Transform applied to image only.

Usage

```
icevision_ImageOnlyTransform(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

icevision_InvertImg *InvertImg*

Description

Invert the input image by subtracting pixel values from 255.

Usage

```
icevision_InvertImg(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8

icevision_ISONoise *ISONoise*

Description

Apply camera sensor noise.

Usage

```
icevision_ISONoise(  
  color_shift = list(0.01, 0.05),  
  intensity = list(0.1, 0.5),  
  always_apply = FALSE,  
  p = 0.5  
)
```

Arguments

| | |
|--------------|--------------|
| color_shift | color_shift |
| intensity | intensity |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8

icevision_JpegCompression
JpegCompression

Description

Decrease Jpeg compression of an image.

Usage

```
icevision_JpegCompression(
    quality_lower = 99,
    quality_upper = 100,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|---------------|---------------|
| quality_lower | quality_lower |
| quality_upper | quality_upper |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_LongestMaxSize
LongestMaxSize

Description

Rescale an image so that maximum side is equal to max_size, keeping the aspect ratio of the initial image.

Usage

```
icevision_LongestMaxSize(  
    max_size = 1024,  
    interpolation = 1,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

| | |
|---------------|---------------|
| max_size | max_size |
| interpolation | interpolation |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_MaskDropout *MaskDropout*

Description

Image & mask augmentation that zero out mask and image regions corresponding

Usage

```
icevision_MaskDropout(  
    max_objects = 1,  
    image_fill_value = 0,  
    mask_fill_value = 0,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|------------------|------------------|
| max_objects | max_objects |
| image_fill_value | image_fill_value |
| mask_fill_value | mask_fill_value |
| always_apply | always_apply |
| p | p |

Details

to randomly chosen object instance from mask. Mask must be single-channel image, zero values treated as background. Image can be any number of channels. Inspired by <https://www.kaggle.com/c/severstal-steel-defect-detection/discussion/114254>

Value

None

icevision_MedianBlur *MedianBlur*

Description

Blur the input image using a median filter with a random aperture linear size.

Usage

```
icevision_MedianBlur(blur_limit = 7, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| blur_limit | blur_limit |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_MotionBlur *MotionBlur*

Description

Apply motion blur to the input image using a random-sized kernel.

Usage

```
icevision_MotionBlur(blur_limit = 7, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| blur_limit | blur_limit |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_MultiplicativeNoise
MultiplicativeNoise

Description

Multiply image to random number or array of numbers.

Usage

```
icevision_MultiplicativeNoise(
    multiplier = list(0.9, 1.1),
    per_channel = FALSE,
    elementwise = FALSE,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|--------------|--------------|
| multiplier | multiplier |
| per_channel | per_channel |
| elementwise | elementwise |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

Any

icevision_Normalize *Normalize*

Description

Divide pixel values by $255 = 2^{*}8 - 1$, subtract mean per channel and divide by std per channel.

Usage

```
icevision_Normalize(  
    mean = list(0.485, 0.456, 0.406),  
    std = list(0.229, 0.224, 0.225),  
    max_pixel_value = 255,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

| | |
|-----------------|-----------------|
| mean | mean |
| std | std |
| max_pixel_value | max_pixel_value |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

```
icevision_OpticalDistortion
    OpticalDistortion
```

Description

OpticalDistortion

Usage

```
icevision_OpticalDistortion(
    distort_limit = 0.05,
    shift_limit = 0.05,
    interpolation = 1,
    border_mode = 4,
    value = NULL,
    mask_value = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|----------------------------|----------------------------|
| <code>distort_limit</code> | <code>distort_limit</code> |
| <code>shift_limit</code> | <code>shift_limit</code> |
| <code>interpolation</code> | <code>interpolation</code> |
| <code>border_mode</code> | <code>border_mode</code> |
| <code>value</code> | <code>value</code> |
| <code>mask_value</code> | <code>mask_value</code> |
| <code>always_apply</code> | <code>always_apply</code> |
| <code>p</code> | <code>p</code> |

Details

`distort_limit` (float, (float, float)): If `distort_limit` is a single float, the range will be $(-distort_limit, distort_limit)$. Default: $(-0.05, 0.05)$. `shift_limit` (float, (float, float)): If `shift_limit` is a single float, the range will be $(-shift_limit, shift_limit)$. Default: $(-0.05, 0.05)$. `interpolation` (OpenCV flag): flag that is used to specify the interpolation algorithm. Should be one of: `cv2.INTER_NEAREST`, `cv2.INTER_LINEAR`, `cv2.INTER_CUBIC`, `cv2.INTER_AREA`, `cv2.INTER_LANCZOS4`. Default: `cv2.INTER_LINEAR`. `border_mode` (OpenCV flag): flag that is used to specify the pixel extrapolation method. Should be one of: `cv2.BORDER_CONSTANT`, `cv2.BORDER_REPLICATE`, `cv2.BORDER_REFLECT`, `cv2.BORDER_WRAP`, `cv2.BORDER_REFLECT_101`. Default: `cv2.BORDER_REFLECT_101`. `value` (int, float, list of ints, list of float): padding value if `border_mode` is `cv2.BORDER_CONSTANT`. `mask_value` (int, float, list of ints, list of float): padding value if `border_mode` is `cv2.BORDER_CONSTANT` applied for masks. Targets: image, mask Image types: uint8, float32

Value

None

Targets

image, mask

Image types

uint8, float32

 icevision_PadIfNeeded *PadIfNeeded*

Description

Pad side of the image / max if side is less than desired number.

Usage

```
icevision_PadIfNeeded(
    min_height = 1024,
    min_width = 1024,
    pad_height_divisor = NULL,
    pad_width_divisor = NULL,
    border_mode = 4,
    value = NULL,
    mask_value = NULL,
    always_apply = FALSE,
    p = 1
)
```

Arguments

| | |
|--------------------|--------------------|
| min_height | min_height |
| min_width | min_width |
| pad_height_divisor | pad_height_divisor |
| pad_width_divisor | pad_width_divisor |
| border_mode | border_mode |
| value | value |
| mask_value | mask_value |
| always_apply | always_apply |
| p | p |

Targets

image, mask, bbox, keypoints

Image types

uint8, float32

| | |
|-----------------|--------------|
| icevision_parse | <i>Parse</i> |
|-----------------|--------------|

Description

Loops through all data points parsing the required fields.

Usage

```
icevision_parse(
    data_splitter = NULL,
    idmap = NULL,
    autofix = TRUE,
    show_pbar = TRUE,
    cache_filepath = NULL
)
```

Arguments

| | |
|-----------------------------|---|
| <code>data_splitter</code> | How to split the parsed data, defaults to a [0.8, 0.2] random split. |
| <code>idmap</code> | Maps from filenames to unique ids, pass an 'IDMap()' if you need this information. |
| <code>autofix</code> | autofix |
| <code>show_pbar</code> | Whether or not to show a progress bar while parsing the data. |
| <code>cache_filepath</code> | Path to save records in pickle format. Defaults to NULL, e.g. if the user does not specify a path, no saving nor loading happens. |

Value

A list of records for each split defined by `data_splitter`.

icevision_Posterize *Posterize*

Description

Reduce the number of bits for each color channel.

Usage

```
icevision_Posterize(num_bits = 4, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| num_bits | num_bits |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8

icevision_RandomBrightnessContrast
RandomBrightnessContrast

Description

Randomly change brightness and contrast of the input image.

Usage

```
icevision_RandomBrightnessContrast(  
  brightness_limit = 0.2,  
  contrast_limit = 0.2,  
  brightness_by_max = TRUE,  
  always_apply = FALSE,  
  p = 0.5  
)
```

Arguments

| | |
|-------------------|-------------------|
| brightness_limit | brightness_limit |
| contrast_limit | contrast_limit |
| brightness_by_max | brightness_by_max |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_RandomContrast

RandomContrast

Description

Randomly change contrast of the input image.

Usage

```
icevision_RandomContrast(limit = 0.2, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| limit | limit |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

icevision_RandomCrop *RandomCrop*

Description

Crop a random part of the input.

Usage

```
icevision_RandomCrop(height, width, always_apply = FALSE, p = 1)
```

Arguments

| | |
|--------------|--------------|
| height | height |
| width | width |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

```
icevision_RandomCropNearBBox
    RandomCropNearBBox
```

Description

Crop bbox from image with random shift by x,y coordinates

Usage

```
icevision_RandomCropNearBBox(max_part_shift = 0.3, always_apply = FALSE, p = 1)
```

Arguments

```
max_part_shift  max_part_shift
always_apply    always_apply
p               p
```

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

```
icevision_RandomFog    RandomFog
```

Description

Simulates fog for the image

Usage

```
icevision_RandomFog(
  fog_coef_lower = 0.3,
  fog_coef_upper = 1,
  alpha_coef = 0.08,
  always_apply = FALSE,
  p = 0.5
)
```

Arguments

| | |
|----------------|----------------|
| fog_coef_lower | fog_coef_lower |
| fog_coef_upper | fog_coef_upper |
| alpha_coef | alpha_coef |
| always_apply | always_apply |
| p | p |

Details

Value

None

Targets

image

Image types

uint8, float32

icevision_RandomGamma *RandomGamma*

Description

RandomGamma

Usage

```
icevision_RandomGamma(
    gamma_limit = list(80, 120),
    eps = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|--------------|--------------|
| gamma_limit | gamma_limit |
| eps | Deprecated. |
| always_apply | always_apply |
| p | p |

Details

gamma_limit (float or (float, float)): If gamma_limit is a single float value, the range will be (-gamma_limit, gamma_limit). Default: (80, 120). eps: Deprecated. Targets: image Image types: uint8, float32

Value

None

Targets

image

Image types

uint8, float32

icevision_RandomGridShuffle

RandomGridShuffle

Description

Random shuffle grid's cells on image.

Usage

```
icevision_RandomGridShuffle(grid = list(3, 3), always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| grid | grid |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask

Image types

uint8, float32

 icevision_RandomRain *RandomRain*

Description

Adds rain effects.

Usage

```
icevision_RandomRain(
    slant_lower = -10,
    slant_upper = 10,
    drop_length = 20,
    drop_width = 1,
    drop_color = list(200, 200, 200),
    blur_value = 7,
    brightness_coefficient = 0.7,
    rain_type = NULL,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|------------------------|---|
| slant_lower | should be in range [-20, 20]. |
| slant_upper | should be in range [-20, 20]. |
| drop_length | should be in range [0, 100]. |
| drop_width | should be in range [1, 5]. drop_color (list of (r, g, b)): rain lines color. blur_value (int): rainy view are blurry brightness_coefficient (float): rainy days are usually shady. Should be in range [0, 1]. |
| drop_color | drop_color |
| blur_value | blur_value |
| brightness_coefficient | brightness_coefficient |
| rain_type | One of [NULL, "drizzle", "heavy", "torrestial"] |
| always_apply | always_apply |
| p | p |

Targets

image

Image types

uint8, float32

```
icevision_RandomResizedCrop
    RandomResizedCrop
```

Description

Torchvision's variant of crop a random part of the input and rescale it to some size.

Usage

```
icevision_RandomResizedCrop(
    height,
    width,
    scale = list(0.08, 1),
    ratio = list(0.75, 1.3333333333333333),
    interpolation = 1,
    always_apply = FALSE,
    p = 1
)
```

Arguments

| | |
|---------------|---------------|
| height | height |
| width | width |
| scale | scale |
| ratio | ratio |
| interpolation | interpolation |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_RandomRotate90
RandomRotate90

Description

Randomly rotate the input by 90 degrees zero or more times.

Usage

```
icevision_RandomRotate90(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_RandomScale *RandomScale*

Description

Randomly resize the input. Output image size is different from the input image size.

Usage

```
icevision_RandomScale(  
  scale_limit = 0.1,  
  interpolation = 1L,  
  always_apply = FALSE,  
  p = 0.5  
)
```

Arguments

| | |

| scale_limit | scale_limit |
| interpolation | interpolation |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_RandomShadow

RandomShadow

Description

Simulates shadows for the image

Usage

```
icevision_RandomShadow(
    shadow_roi = list(0, 0.5, 1, 1),
    num_shadows_lower = 1,
    num_shadows_upper = 2,
    shadow_dimension = 5,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|-------------------|-------------------|
| shadow_roi | shadow_roi |
| num_shadows_lower | num_shadows_lower |
| num_shadows_upper | num_shadows_upper |
| shadow_dimension | shadow_dimension |
| always_apply | always_apply |
| p | p |

icevision_RandomSizedBBoxSafeCrop
RandomSizedBBoxSafeCrop

Description

Crop a random part of the input and rescale it to some size without loss of bboxes.

Crop a random part of the input and rescale it to some size without loss of bboxes.

Usage

```
icevision_RandomSizedBBoxSafeCrop(  
    height,  
    width,  
    erosion_rate = 0,  
    interpolation = 1,  
    always_apply = FALSE,  
    p = 1  
)
```

```
icevision_RandomSizedBBoxSafeCrop(  
    height,  
    width,  
    erosion_rate = 0,  
    interpolation = 1,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

icevision_RandomSizedCrop
RandomSizedCrop

Description

Crop a random part of the input and rescale it to some size.

Usage

```
icevision_RandomSizedCrop(  
    min_max_height,  
    height,  
    width,  
    w2h_ratio = 1,  
    interpolation = 1,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

| | |
|----------------|----------------|
| min_max_height | min_max_height |
| height | height |
| width | width |
| w2h_ratio | w2h_ratio |
| interpolation | interpolation |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_RandomSnow *RandomSnow*

Description

Bleach out some pixel values simulating snow.

Usage

```
icevision_RandomSnow(
    snow_point_lower = 0.1,
    snow_point_upper = 0.3,
    brightness_coeff = 2.5,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|------------------|------------------|
| snow_point_lower | snow_point_lower |
| snow_point_upper | snow_point_upper |
| brightness_coeff | brightness_coeff |
| always_apply | always_apply |
| p | p |

icevision_RandomSplitter
RandomSplitter

Description

Randomly splits items.

Usage

```
icevision_RandomSplitter(probs, seed = NULL)
```

Arguments

| | |
|-------|--|
| probs | 'Sequence' of probabilities that must sum to one. The length of the 'Sequence' is the number of groups to to split the items into. |
| seed | Internal seed used for shuffling the items. Define this if you need reproducible results. |

Value

None

icevision_RandomSunFlare
RandomSunFlare

Description

Simulates Sun Flare for the image

Usage

```
icevision_RandomSunFlare(  
    flare_roi = list(0, 0, 1, 0.5),  
    angle_lower = 0,  
    angle_upper = 1,  
    num_flare_circles_lower = 6,  
    num_flare_circles_upper = 10,  
    src_radius = 400,  
    src_color = list(255, 255, 255),  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|-------------------------|-------------------------|
| flare_roi | flare_roi |
| angle_lower | angle_lower |
| angle_upper | angle_upper |
| num_flare_circles_lower | num_flare_circles_lower |
| num_flare_circles_upper | num_flare_circles_upper |
| src_radius | src_radius |
| src_color | src_color |
| always_apply | always_apply |
| p | p |

| | |
|--------------------------|-----------------------|
| icevision_resize_and_pad | <i>Resize_and_pad</i> |
|--------------------------|-----------------------|

Description

Resize_and_pad

Usage

```
icevision_resize_and_pad(  
    size,  
    pad = partial(icevision_PadIfNeeded, border_mode = 0, value = c(124L, 116L, 104L))  
)
```

Arguments

| | |
|------|------|
| size | size |
| pad | pad |

Value

None

| | |
|--------------------|-----------------|
| icevision_RGBShift | <i>RGBShift</i> |
|--------------------|-----------------|

Description

Randomly shift values for each channel of the input RGB image.

Randomly shift values for each channel of the input RGB image.

Usage

```
icevision_RGBShift(
    r_shift_limit = 20,
    g_shift_limit = 20,
    b_shift_limit = 20,
    always_apply = FALSE,
    p = 0.5
)
```

```
icevision_RGBShift(
    r_shift_limit = 20,
    g_shift_limit = 20,
    b_shift_limit = 20,
    always_apply = FALSE,
    p = 0.5
)
```

Arguments

| | |
|---------------|---------------|
| r_shift_limit | r_shift_limit |
| g_shift_limit | g_shift_limit |
| b_shift_limit | b_shift_limit |
| always_apply | always_apply |
| p | p |

Value

None

None

Targets

image
image

Image types

uint8, float32
uint8, float32

| | |
|------------------|---------------|
| icevision_Rotate | <i>Rotate</i> |
|------------------|---------------|

Description

Rotate the input by an angle selected randomly from the uniform distribution.

Usage

```
icevision_Rotate(  
    limit = 90,  
    interpolation = 1,  
    border_mode = 4,  
    value = NULL,  
    mask_value = NULL,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|---------------|---------------|
| limit | limit |
| interpolation | interpolation |
| border_mode | border_mode |
| value | value |
| mask_value | mask_value |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

`icevision_ShiftScaleRotate`*ShiftScaleRotate*

Description

Randomly apply affine transforms: translate, scale and rotate the input.

Randomly apply affine transforms: translate, scale and rotate the input.

Usage

```
icevision_ShiftScaleRotate(  
    shift_limit = 0.0625,  
    scale_limit = 0.1,  
    rotate_limit = 45,  
    interpolation = 1,  
    border_mode = 4,  
    value = NULL,  
    mask_value = NULL,  
    shift_limit_x = NULL,  
    shift_limit_y = NULL,  
    always_apply = FALSE,  
    p = 0.5  
)
```

```
icevision_ShiftScaleRotate(  
    shift_limit = 0.0625,  
    scale_limit = 0.1,  
    rotate_limit = 45,  
    interpolation = 1,  
    border_mode = 4,  
    value = NULL,  
    mask_value = NULL,  
    shift_limit_x = NULL,  
    shift_limit_y = NULL,  
    always_apply = FALSE,  
    p = 0.5  
)
```

Arguments

| | |
|--------------------------|--------------------------|
| <code>shift_limit</code> | <code>shift_limit</code> |
| <code>scale_limit</code> | <code>scale_limit</code> |

| | |
|---------------|---------------|
| rotate_limit | rotate_limit |
| interpolation | interpolation |
| border_mode | border_mode |
| value | value |
| mask_value | mask_value |
| shift_limit_x | shift_limit_x |
| shift_limit_y | shift_limit_y |
| always_apply | always_apply |
| p | p |

Value

None
None

Targets

image, mask, keypoints
image, mask, keypoints

Image types

uint8, float32
uint8, float32

icevision_SingleSplitSplitter
SingleSplitSplitter

Description

SingleSplitSplitter

Usage

icevision_SingleSplitSplitter(...)

Arguments

... arguments to pass

Value

all items in a single group, without shuffling.

icevision_SmallestMaxSize
SmallestMaxSize

Description

Rescale an image so that minimum side is equal to max_size, keeping the aspect ratio of the initial image.

Usage

```
icevision_SmallestMaxSize(  
    max_size = 1024,  
    interpolation = 1,  
    always_apply = FALSE,  
    p = 1  
)
```

Arguments

| | |
|---------------|---------------|
| max_size | max_size |
| interpolation | interpolation |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

icevision_Solarize *Solarize*

Description

Invert all pixel values above a threshold.

Usage

```
icevision_Solarize(threshold = 128, always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| threshold | threshold |
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

any

icevision_ToFloat *ToFloat*

Description

Divide pixel values by 'max_value' to get a float32 output array where all values lie in the range [0, 1.0].

Usage

```
icevision_ToFloat(max_value = NULL, always_apply = FALSE, p = 1)
```

Arguments

| | |
|--------------|--------------|
| max_value | max_value |
| always_apply | always_apply |
| p | p |

Details

If 'max_value' is NULL the transform will try to infer the maximum value by inspecting the data type of the input image. See Also: :class:`~albumentations.augmentations.transforms.FromFloat`

Value

None

See Also

:class:`~albumentations.augmentations.transforms.FromFloat`

Targets

image

Image types

any type

| | |
|------------------|---------------|
| icevision_ToGray | <i>ToGray</i> |
|------------------|---------------|

Description

Convert the input RGB image to grayscale. If the mean pixel value for the resulting image is greater than 127, invert the resulting grayscale image.

Usage

```
icevision_ToGray(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

| | |
|-------------------|----------------|
| icevision_ToSepia | <i>ToSepia</i> |
|-------------------|----------------|

Description

Applies sepia filter to the input RGB image

Usage

```
icevision_ToSepia(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image

Image types

uint8, float32

| | |
|---------------------|------------------|
| icevision_Transpose | <i>Transpose</i> |
|---------------------|------------------|

Description

Transpose the input by swapping rows and columns.

Usage

```
icevision_Transpose(always_apply = FALSE, p = 0.5)
```

Arguments

| | |
|--------------|--------------|
| always_apply | always_apply |
| p | p |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

`icevision_VerticalFlip`*VerticalFlip*

Description

Flip the input vertically around the x-axis.

Usage`icevision_VerticalFlip(always_apply = FALSE, p = 0.5)`**Arguments**

| | |
|---------------------------|---------------------------|
| <code>always_apply</code> | <code>always_apply</code> |
| <code>p</code> | <code>p</code> |

Value

None

Targets

image, mask, bboxes, keypoints

Image types

uint8, float32

| | |
|-----------|------------------|
| icnr_init | <i>Icnr_init</i> |
|-----------|------------------|

Description

ICNR init of 'x', with 'scale' and 'init' function

Usage

```
icnr_init(x, scale = 2, init = nn()$init$kaiming_normal_)
```

Arguments

| | |
|-------|-------------|
| x | tensor |
| scale | int, scale |
| init | initializer |

Value

None

| | |
|-------|--------------|
| IDMap | <i>IDMap</i> |
|-------|--------------|

Description

Works like a dictionary that automatically assign values for new keys.

Usage

```
IDMap(initial_names = NULL)
```

Arguments

| | |
|---------------|---------------|
| initial_names | initial_names |
|---------------|---------------|

Value

None

Image

Image

Description

Image

Usage

Image(...)

Arguments

... parameters to pass

ValueNone

image2tensor

Image2tensor

Description

Transform image to byte tensor in 'c*h*w' dim order.

Usage

image2tensor(img)

Arguments

img image

Value

None

ImageBlock

ImageBlock

Description

A 'TransformBlock' for images of 'cls'

Usage

ImageBlock(...)

Arguments

... parameters to pass

Value

block

ImageBW_create

ImageBW_create

Description

Open an 'Image' from path 'fn'

Usage

ImageBW_create(fn)

Arguments

fn file name

Value

None

 ImageDataLoaders_from_csv

ImageDataLoaders from csv

Description

Create from 'path/csv_fname' using 'fn_col' and 'label_col'

Usage

```

ImageDataLoaders_from_csv(
  path,
  csv_fname = "labels.csv",
  header = "infer",
  delimiter = NULL,
  valid_pct = 0.2,
  seed = NULL,
  fn_col = 0,
  folder = NULL,
  suff = "",
  label_col = 1,
  label_delim = NULL,
  y_block = NULL,
  valid_col = NULL,
  item_tfms = NULL,
  batch_tfms = NULL,
  bs = 64,
  val_bs = NULL,
  size = NULL,
  shuffle_train = TRUE,
  device = NULL,
  ...
)

```

Arguments

| | |
|-----------|--------------------------|
| path | The folder where to work |
| csv_fname | csv file name |
| header | header |
| delimiter | delimiter |
| valid_pct | validation percentage |
| seed | random seed |
| fn_col | column name |
| folder | folder name |

| | |
|---------------|---|
| suff | suff |
| label_col | label column |
| label_delim | label delimiter |
| y_block | y_block |
| valid_col | validation column |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| size | image size |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| ... | additional parameters to pass |

Value

None

ImageDataLoaders_from_dblock
ImageDataLoaders from dblock

Description

Create a dataloaders from a given ‘dblock‘

Usage

```
ImageDataLoaders_from_dblock(
    dblock,
    source,
    path = ".",
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL,
    ...
)
```

Arguments

| | |
|---------------|---|
| dblock | dblock |
| source | source folder |
| path | The folder where to work |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| ... | additional parameters to pass |

Value

None

 ImageDataLoaders_from_df

ImageDataLoaders from df

Description

Create from 'df' using 'fn_col' and 'label_col'

Usage

```

ImageDataLoaders_from_df(
  df,
  path = ".",
  valid_pct = 0.2,
  seed = NULL,
  fn_col = 0,
  folder = NULL,
  suff = "",
  label_col = 1,
  label_delim = NULL,
  y_block = NULL,
  valid_col = NULL,
  item_tfms = NULL,
  batch_tfms = NULL,
  bs = 64,
  val_bs = NULL,
  shuffle_train = TRUE,
  device = NULL,
  ...
)

```

Arguments

| | |
|---------------|---|
| df | data frame |
| path | The folder where to work |
| valid_pct | validation percentage |
| seed | random seed |
| fn_col | column name |
| folder | folder name |
| suff | suff |
| label_col | label column |
| label_delim | label separator |
| y_block | y_block |
| valid_col | validation column |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | shuffle_train |
| device | device |
| ... | additional parameters to pass |

Value

None

ImageDataLoaders_from_folder
ImageDataLoaders from folder

Description

Create from imagenet style dataset in 'path' with 'train' and 'valid' subfolders (or provide 'valid_pct')

Usage

```
ImageDataLoaders_from_folder(
    path,
    train = "train",
    valid = "valid",
    valid_pct = NULL,
    seed = NULL,
    vocab = NULL,
```

```

    item_tfms = NULL,
    batch_tfms = NULL,
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL,
    size = NULL,
    ...
)

```

Arguments

| | |
|---------------|---|
| path | The folder where to work |
| train | train data |
| valid | validation data |
| valid_pct | validation percentage |
| seed | random seed |
| vocab | vocabulary |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| size | image size |
| ... | additional parameters to pass |

ImageDataLoaders_from_lists

ImageDataLoaders from lists

Description

Create from list of 'fnames' and 'labels' in 'path'

Usage

```

ImageDataLoaders_from_lists(
  path,
  fnames,
  labels,
  valid_pct = 0.2,
  seed = NULL,
)

```

```

    y_block = NULL,
    item_tfms = NULL,
    batch_tfms = NULL,
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL,
    ...
)

```

Arguments

| | |
|---------------|---|
| path | The folder where to work |
| fnames | file names |
| labels | labels |
| valid_pct | validation percentage |
| seed | random seed |
| y_block | y_block |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| ... | additional parameters to pass |

Value

None

ImageDataLoaders_from_name_re

ImageDataLoaders from name regex

Description

Create from the name attrs of 'fnames' in 'path's with re expression 'pat'

Usage

```
ImageDataLoaders_from_name_re(
    path,
    fnames,
    pat,
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL,
    item_tfms = NULL,
    batch_tfms = NULL,
    ...
)
```

Arguments

| | |
|---------------|---|
| path | The folder where to work |
| fnames | folder names |
| pat | an argument that requires regex |
| bs | The batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| ... | additional parameters to pass |

Value

None

Examples

```
## Not run:

URLs_PETS()

path = 'oxford-iiit-pet'

dls = ImageDataLoaders_from_name_re(
  path, fnames, pat='(.)_\\d+.jpg$',
  item_tfms = RandomResizedCrop(460, min_scale=0.75), bs = 10,
  batch_tfms = list(aug_transforms(size = 299, max_warp = 0),
                    Normalize_from_stats( imagenet_stats() )
  ),
  device = 'cuda'
```

```
)

## End(Not run)
```

```
ImageDataLoaders_from_path_func
    ImageDataLoaders from path function
```

Description

Create from list of 'fnames' in 'path's with 'label_func'

Usage

```
ImageDataLoaders_from_path_func(
  path,
  fnames,
  label_func,
  valid_pct = 0.2,
  seed = NULL,
  item_tfms = NULL,
  batch_tfms = NULL,
  bs = 64,
  val_bs = NULL,
  shuffle_train = TRUE,
  device = NULL,
  ...
)
```

Arguments

| | |
|---------------|--|
| path | The folder where to work |
| fnames | file names |
| label_func | label function |
| valid_pct | The random percentage of the dataset to set aside for validation (with an optional seed) |
| seed | random seed |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| ... | additional parameters to pass |

Value

None

ImageDataLoaders_from_path_re

ImageDataLoaders from path re

Description

Create from list of 'fnames' in 'path's with re expression 'pat'

Usage

```
ImageDataLoaders_from_path_re(
    path,
    fnames,
    pat,
    valid_pct = 0.2,
    seed = NULL,
    item_tfms = NULL,
    batch_tfms = NULL,
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL,
    ...
)
```

Arguments

| | |
|---------------|--|
| path | The folder where to work |
| fnames | file names |
| pat | an argument that requires regex |
| valid_pct | The random percentage of the dataset to set aside for validation (with an optional seed) |
| seed | random seed |
| item_tfms | One or several transforms applied to the items before batching them |
| batch_tfms | One or several transforms applied to the batches once they are formed |
| bs | batch size |
| val_bs | The batch size for the validation DataLoader (defaults to bs) |
| shuffle_train | If we shuffle the training DataLoader or not |
| device | device name |
| ... | additional parameters to pass |

Value

None

| | |
|----------------|----------------------------|
| imagenet_stats | <i>Imagenet statistics</i> |
|----------------|----------------------------|

Description

Imagenet statistics

Usage

imagenet_stats()

Value

vector

Examples

```
## Not run:  
  
imagenet_stats()  
  
## End(Not run)
```

| | |
|--------------|---------------------|
| Image_create | <i>Image_create</i> |
|--------------|---------------------|

Description

Open an 'Image' from path 'fn'

Usage

Image_create(fn)

Arguments

fn file name

Value

None

| | |
|------------|-------------------|
| Image_open | <i>Image_open</i> |
|------------|-------------------|

Description

Opens and identifies the given image file.

Usage

```
Image_open(fp, mode = "r")
```

Arguments

| | |
|------|------|
| fp | fp |
| mode | mode |

Value

None

| | |
|--------------|---------------|
| Image_resize | <i>Resize</i> |
|--------------|---------------|

Description

Returns a resized copy of this image.

Usage

```
Image_resize(img, size, resample = 3, box = NULL, reducing_gap = NULL)
```

Arguments

| | |
|--------------|--------------|
| img | image |
| size | size |
| resample | resample |
| box | box |
| reducing_gap | reducing_gap |

Value

None

| | |
|-----------------|------------------------|
| InceptionModule | <i>InceptionModule</i> |
|-----------------|------------------------|

Description

The inception Module from 'ni' inputs to len('kss')*'nb_filters'+ 'bottleneck_size'

Usage

```
InceptionModule(
    ni,
    nb_filters = 32,
    kss = c(39, 19, 9),
    bottleneck_size = 32,
    stride = 1
)
```

Arguments

| | |
|-----------------|--------------------------|
| ni | number of input channels |
| nb_filters | the number of filters |
| kss | kernel size |
| bottleneck_size | bottleneck size |
| stride | stride |

Value

module

| | |
|---------------|-----------------------|
| IndexSplitter | <i>Index Splitter</i> |
|---------------|-----------------------|

Description

Split 'items' so that 'val_idx' are in the validation set and the others in the training set

Usage

```
IndexSplitter(valid_idx)
```

Arguments

| | |
|-----------|--|
| valid_idx | The indices to use for the validation set (defaults to a random split otherwise) |
|-----------|--|

Value

None

`init`

*Wandb init***Description**

Initialize a wandb Run.

Usage`init(...)`**Arguments**`...` parameters to pass**Value**

wandb Run object

None

see https[//docs.wandb.com/library/init](https://docs.wandb.com/library/init)

`init_default`

*Init_default***Description**

Initialize 'm' weights with 'func' and set 'bias' to 0.

Usage`init_default(m, func = nn()$init$kaiming_normal_)`**Arguments**`m` parameters`func` function**Value**

None

| | |
|-------------|--------------------|
| init_linear | <i>Init_linear</i> |
|-------------|--------------------|

Description

Init_linear

Usage

```
init_linear(m, act_func = NULL, init = "auto", bias_std = 0.01)
```

Arguments

| | |
|----------|-------------------------|
| m | parameter |
| act_func | activation function |
| init | initializer |
| bias_std | bias standard deviation |

Value

None

| | |
|----------------|-----------------------|
| install_fastai | <i>Install fastai</i> |
|----------------|-----------------------|

Description

Install fastai

Usage

```
install_fastai(
  version,
  gpu = FALSE,
  cuda_version = "11.8",
  overwrite = FALSE,
  extra_pkgs = c("timm", "fastinference[interp]"),
  TPU = FALSE
)
```

Arguments

| | |
|--------------|---|
| version | specify version |
| gpu | installation of gpu |
| cuda_version | if gpu true, then cuda version is required. By default it is 11.6 |
| overwrite | will install all the dependencies |
| extra_pkgs | character vector of additional packages |
| TPU | official way to install Pytorch-XLA 1.13 |

Value

None

| | |
|--------------|---------------------|
| InstanceNorm | <i>InstanceNorm</i> |
|--------------|---------------------|

Description

InstanceNorm layer with ‘nf’ features and ‘ndim’ initialized depending on ‘norm_type’.

Usage

```
InstanceNorm(
  nf,
  ndim = 2,
  norm_type = 5,
  affine = TRUE,
  eps = 1e-05,
  momentum = 0.1,
  track_running_stats = FALSE
)
```

Arguments

| | |
|---------------------|--------------------------|
| nf | input shape |
| ndim | dimension number |
| norm_type | normalization type |
| affine | affine |
| eps | epsilon |
| momentum | momentum |
| track_running_stats | track running statistics |

Value

None

| | |
|------------------|-------------------------|
| IntToFloatTensor | <i>IntToFloatTensor</i> |
|------------------|-------------------------|

Description

Transform image to float tensor, optionally dividing by 255 (e.g. for images).

Usage

```
IntToFloatTensor(div = 255, div_mask = 1)
```

Arguments

| | |
|----------|--------------|
| div | divide value |
| div_mask | divide mask |

Value

None

| | |
|-----------------|-------------------------|
| InvisibleTensor | <i>Invisible Tensor</i> |
|-----------------|-------------------------|

Description

Invisible Tensor

Usage

```
InvisibleTensor(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

None

| | |
|-------------|--------------------|
| in_channels | <i>In_channels</i> |
|-------------|--------------------|

Description

Return the shape of the first weight layer in 'm'.

Usage

```
in_channels(m)
```

Arguments

m parameters

Value

None

| | |
|--------------|----------------------|
| is_rmarkdown | <i>Is Rmarkdown?</i> |
|--------------|----------------------|

Description

Is Rmarkdown?

Usage

```
is_rmarkdown()
```

Value

logical True/False

| | |
|---------|----------------|
| Jaccard | <i>Jaccard</i> |
|---------|----------------|

Description

Jaccard score for single-label classification problems

Usage

```
Jaccard(
  axis = -1,
  labels = NULL,
  pos_label = 1,
  average = "binary",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

| | |
|--------------|---------------------|
| JaccardCoeff | <i>JaccardCoeff</i> |
|--------------|---------------------|

Description

Implementation of the Jaccard coefficient that is lighter in RAM

Usage

```
JaccardCoeff(axis = 1)
```

Arguments

| | |
|------|------|
| axis | axis |
|------|------|

Value

None

| | |
|--------------|---------------------|
| JaccardMulti | <i>JaccardMulti</i> |
|--------------|---------------------|

Description

Jaccard score for multi-label classification problems

Usage

```
JaccardMulti(  
  thresh = 0.5,  
  sigmoid = TRUE,  
  labels = NULL,  
  pos_label = 1,  
  average = "macro",  
  sample_weight = NULL  
)
```

Arguments

| | |
|---------------|---------------|
| thresh | thresh |
| sigmoid | sigmoid |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

| | |
|----|----------------------|
| kg | <i>Kaggle module</i> |
|----|----------------------|

Description

Kaggle module

Usage

```
kg()
```

Value

None

L

L

Description

Behaves like a list of ‘items’ but can also index with list of indices or masks

Usage

L(...)

Arguments

... arguments to pass

L1LossFlat

L1LossFlat

Description

Flattens input and output, same as nn\$L1LossFlat

Usage

L1LossFlat(...)

Arguments

... parameters to pass

Value

Loss object

| | |
|--------|---------------|
| l2_reg | <i>L2_reg</i> |
|--------|---------------|

Description

L2 regularization as adding 'wd*p' to 'p\$grad'

Usage

```
l2_reg(p, lr, wd, do_wd = TRUE, ...)
```

Arguments

| | |
|-------|------------------------------|
| p | p |
| lr | learning rate |
| wd | weight decay |
| do_wd | do_wd |
| ... | additional arguments to pass |

Value

None

Examples

```
## Not run:

tst_param = function(val, grad = NULL) {
  "Create a tensor with `val` and a gradient of `grad` for testing"
  res = tensor(val) %>% float()

  if(is.null(grad)) {
    grad = tensor(val / 10)
  } else {
    grad = tensor(grad)
  }

  res$grad = grad %>% float()
  res
}

p = tst_param(1., 0.1)
l2_reg(p, 1., 0.1)

## End(Not run)
```

LabeledBBox

LabeledBBox

Description

Basic type for a list of bounding boxes in an image

Usage

LabeledBBox(...)

Arguments

... parameters to pass

Value

None

LabelSmoothingCrossEntropy

LabelSmoothingCrossEntropy

Description

Same as 'nn\$Module', but no need for subclasses to call 'super().__init__'

Usage

LabelSmoothingCrossEntropy(eps = 0.1, reduction = "mean")

Arguments

eps epsilon
reduction reduction, defaults to mean

Value

Loss object

LabelSmoothingCrossEntropyFlat

LabelSmoothingCrossEntropyFlat

Description

Same as 'nn\$Module', but no need for subclasses to call 'super().__init__'

Usage

LabelSmoothingCrossEntropyFlat(...)

Arguments

... parameters to pass

Value

Loss object

Lamb

Lamb

Description

Lamb

Usage

Lamb(...)

Arguments

... parameters to pass

Value

None

| | |
|--------|---------------|
| Lambda | <i>Lambda</i> |
|--------|---------------|

Description

An easy way to create a pytorch layer for a simple ‘func’

Usage

```
Lambda(func)
```

Arguments

| | |
|------|----------|
| func | function |
|------|----------|

Value

None

| | |
|-----------|------------------|
| lamb_step | <i>Lamb_step</i> |
|-----------|------------------|

Description

Step for LAMB with ‘lr’ on ‘p’

Usage

```
lamb_step(p, lr, mom, step, sqr_mom, grad_avg, sqr_avg, eps, ...)
```

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| mom | momentum |
| step | step |
| sqr_mom | sqr momentum |
| grad_avg | gradient average |
| sqr_avg | sqr average |
| eps | epsilon |
| ... | additional arguments to pass |

Value

None

 language_model_learner

Language_model_learner

Description

Create a ‘Learner’ with a language model from ‘dls’ and ‘arch’.

Usage

```
language_model_learner(
  dls,
  arch,
  config = NULL,
  drop_mult = 1,
  backwards = FALSE,
  pretrained = TRUE,
  pretrained_fnames = NULL,
  opt_func = Adam(),
  lr = 0.001,
  cbs = NULL,
  metrics = NULL,
  path = NULL,
  model_dir = "models",
  wd = NULL,
  wd_bn_bias = FALSE,
  train_bn = TRUE,
  moms = list(0.95, 0.85, 0.95),
  ...
)
```

Arguments

| | |
|-------------------|-------------------|
| dls | dls |
| arch | arch |
| config | config |
| drop_mult | drop_mult |
| backwards | backwards |
| pretrained | pretrained |
| pretrained_fnames | pretrained_fnames |
| opt_func | opt_func |
| lr | lr |
| cbs | cbs |

| | |
|------------|----------------------|
| metrics | metrics |
| path | path |
| model_dir | model_dir |
| wd | wd |
| wd_bn_bias | wd_bn_bias |
| train_bn | train_bn |
| moms | moms |
| ... | additional arguments |

Value

None

Larc

Larc

Description

Larc

Usage

Larc(...)

Arguments

... parameters to pass

Value

None

| | |
|---------------|----------------------|
| larc_layer_lr | <i>Larc_layer_lr</i> |
|---------------|----------------------|

Description

Computes the local lr before weight decay is applied

Usage

```
larc_layer_lr(p, lr, trust_coeff, wd, eps, clip = TRUE, ...)
```

Arguments

| | |
|-------------|------------------------------|
| p | p |
| lr | learning rate |
| trust_coeff | trust_coeff |
| wd | weight decay |
| eps | epsilon |
| clip | clip |
| ... | additional arguments to pass |

Value

None

| | |
|-----------|------------------|
| larc_step | <i>Larc_step</i> |
|-----------|------------------|

Description

Step for LARC 'local_lr' on 'p'

Usage

```
larc_step(p, local_lr, grad_avg = NULL, ...)
```

Arguments

| | |
|----------|-------------------------|
| p | p |
| local_lr | local learning rate |
| grad_avg | gradient average |
| ... | additional args to pass |

Value

None

layer_info
*Layer_info***Description**

Return layer infos of 'model' on 'xb' (only support batch first inputs)

Usage

```
layer_info(learn, ...)
```

Arguments

| | |
|-------|----------------------|
| learn | learner/model |
| ... | additional arguments |

Value

None

Learner

*Learner***Description**

Learner

Usage

```
Learner(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

Examples

```

## Not run:

model = LitModel()

data = Data_Loaders(model$train_data_loader(), model$val_data_loader())$cuda()

learn = Learner(data, model, loss_func = F$cross_entropy, opt_func = Adam,
                metrics = accuracy)

## End(Not run)

```

| | |
|--------|---------------|
| length | <i>Length</i> |
|--------|---------------|

Description

Length

Usage

```

## S3 method for class 'torch.Tensor'
length(x)

```

Arguments

x tensor

Value

tensor

| | |
|-------------------------------------|---------------|
| length.fastai.torch_core.TensorMask | <i>Length</i> |
|-------------------------------------|---------------|

Description

Length

Usage

```

## S3 method for class 'fastai.torch_core.TensorMask'
length(x)

```

Arguments

x tensor

Value

tensor

less *Less*

Description

Less

Usage

```
## S3 method for class 'torch.Tensor'  
a < b
```

Arguments

a tensor
b tensor

Value

tensor

less_or_equal *Less or equal*

Description

Less or equal

Usage

```
## S3 method for class 'torch.Tensor'  
a <= b
```

Arguments

a tensor
b tensor

Value

tensor

| | |
|-------------|--------------------|
| LightingTfm | <i>LightingTfm</i> |
|-------------|--------------------|

Description

Apply 'fs' to the logits

Usage

```
LightingTfm(fs, ...)
```

Arguments

| | |
|-----|--------------------|
| fs | fs |
| ... | parameters to pass |

Value

None

| | |
|-----------|------------------|
| LinBnDrop | <i>LinBnDrop</i> |
|-----------|------------------|

Description

Module grouping 'BatchNorm1d', 'Dropout' and 'Linear' layers

Usage

```
LinBnDrop(n_in, n_out, bn = TRUE, p = 0, act = NULL, lin_first = FALSE)
```

Arguments

| | |
|-----------|--------------|
| n_in | input shape |
| n_out | output shape |
| bn | bn |
| p | probability |
| act | activation |
| lin_first | linear first |

Value

None

| | |
|---------------|----------------------|
| LinearDecoder | <i>LinearDecoder</i> |
|---------------|----------------------|

Description

To go on top of a RNNCore module and create a Language Model.

Usage

```
LinearDecoder(n_out, n_hid, output_p = 0.1, tie_encoder = NULL, bias = TRUE)
```

Arguments

| | |
|-------------|-------------|
| n_out | n_out |
| n_hid | n_hid |
| output_p | output_p |
| tie_encoder | tie_encoder |
| bias | bias |

Value

None

| | |
|----------|------------------|
| LitModel | <i>Lit Model</i> |
|----------|------------------|

Description

Lit Model

Usage

```
LitModel()
```

Value

model

LMDataLoader

LMDataLoader

Description

A 'DataLoader' suitable for language modeling

Usage

```
LMDataLoader(  
    dataset,  
    lens = NULL,  
    cache = 2,  
    bs = 64,  
    seq_len = 72,  
    num_workers = 0,  
    shuffle = FALSE,  
    verbose = FALSE,  
    do_setup = TRUE,  
    pin_memory = FALSE,  
    timeout = 0L,  
    batch_size = NULL,  
    drop_last = FALSE,  
    indexed = NULL,  
    n = NULL,  
    device = NULL  
)
```

Arguments

| | |
|-------------|-------------|
| dataset | dataset |
| lens | lens |
| cache | cache |
| bs | bs |
| seq_len | seq_len |
| num_workers | num_workers |
| shuffle | shuffle |
| verbose | verbose |
| do_setup | do_setup |
| pin_memory | pin_memory |
| timeout | timeout |
| batch_size | batch_size |
| drop_last | drop_last |

| | |
|---------|---------|
| indexed | indexed |
| n | n |
| device | device |

Value

text loader

| | |
|-----------|------------------|
| LMLearner | <i>LMLearner</i> |
|-----------|------------------|

Description

Add functionality to ‘TextLearner‘ when dealing with a language model
 Add functionality to ‘TextLearner‘ when dealing with a language model

Usage

```
LMLearner(
  dls,
  model,
  alpha = 2,
  beta = 1,
  moms = list(0.8, 0.7, 0.8),
  loss_func = NULL,
  opt_func = Adam(),
  lr = 0.001,
  splitter = trainable_params(),
  cbs = NULL,
  metrics = NULL,
  path = NULL,
  model_dir = "models",
  wd = NULL,
  wd_bn_bias = FALSE,
  train_bn = TRUE
)
```

```
LMLearner(
  dls,
  model,
  alpha = 2,
  beta = 1,
  moms = list(0.8, 0.7, 0.8),
  loss_func = NULL,
  opt_func = Adam(),
  lr = 0.001,
```

```

    splitter = trainable_params(),
    cbs = NULL,
    metrics = NULL,
    path = NULL,
    model_dir = "models",
    wd = NULL,
    wd_bn_bias = FALSE,
    train_bn = TRUE
)

```

Arguments

| | |
|------------|------------|
| dls | dls |
| model | model |
| alpha | alpha |
| beta | beta |
| moms | moms |
| loss_func | loss_func |
| opt_func | opt_func |
| lr | lr |
| splitter | splitter |
| cbs | cbs |
| metrics | metrics |
| path | path |
| model_dir | model_dir |
| wd | wd |
| wd_bn_bias | wd_bn_bias |
| train_bn | train_bn |

Value

text loader
None

LMLearner_predict *LMLearner_predict*

Description

Return 'text' and the 'n_words' that come after

Usage

```

LMLearner_predict(
  text,
  n_words = 1,
  no_unk = TRUE,
  temperature = 1,
  min_p = NULL,
  no_bar = FALSE,
  decoder = decode_spec_tokens(),
  only_last_word = FALSE
)

```

Arguments

| | |
|----------------|----------------|
| text | text |
| n_words | n_words |
| no_unk | no_unk |
| temperature | temperature |
| min_p | min_p |
| no_bar | no_bar |
| decoder | decoder |
| only_last_word | only_last_word |

Value

None

loaders

Loaders

Description

a loader from Catalyst

Usage

```
loaders()
```

Value

None

Examples

```
## Not run:

# trigger download
loaders()

## End(Not run)
```

| | |
|--------------|---------------------|
| load_dataset | <i>Load_dataset</i> |
|--------------|---------------------|

Description

A helper function for getting a DataLoader for images in the folder ‘test_path’, with batch size ‘bs’, and number of workers ‘num_workers’

Usage

```
load_dataset(test_path, bs = 4, num_workers = 4)
```

Arguments

| | |
|-------------|-----------------------|
| test_path | test path (directory) |
| bs | batch size |
| num_workers | number of workers |

Value

None

| | |
|------------------|-------------------------|
| load_ignore_keys | <i>Load_ignore_keys</i> |
|------------------|-------------------------|

Description

Load ‘wgt’s in ‘model’ ignoring the names of the keys, just taking parameters in order

Usage

```
load_ignore_keys(model, wgt's)
```

Arguments

| | |
|-------|-------|
| model | model |
| wgts | wgts |

Value

None

| | |
|------------|-------------------|
| load_image | <i>Load_image</i> |
|------------|-------------------|

Description

Open and load a 'PIL.Image' and convert to 'mode'

Usage

```
load_image(fn, mode = NULL)
```

Arguments

| | |
|------|-----------|
| fn | file name |
| mode | mode |

Value

None

| | |
|--------------|---------------------|
| load_learner | <i>Load_learner</i> |
|--------------|---------------------|

Description

Load a 'Learner' object in 'fname', optionally putting it on the 'cpu'

Usage

```
load_learner(fname, cpu = TRUE)
```

Arguments

| | |
|-------|------------|
| fname | fname |
| cpu | cpu or not |

Value

learner object

| | |
|-----------------|------------------------|
| load_model_text | <i>Load_model_text</i> |
|-----------------|------------------------|

Description

Load 'model' from 'file' along with 'opt' (if available, and if 'with_opt')

Usage

```
load_model_text(
  file,
  model,
  opt,
  with_opt = NULL,
  device = NULL,
  strict = TRUE
)
```

Arguments

| | |
|----------|----------|
| file | file |
| model | model |
| opt | opt |
| with_opt | with_opt |
| device | device |
| strict | strict |

Value

None

| | |
|-----------------|--------------------|
| load_pre_models | <i>Timm models</i> |
|-----------------|--------------------|

Description

Timm models

Usage

```
load_pre_models()
```

Value

None

| | |
|--------------------|---------------------------|
| load_tokenized_csv | <i>Load_tokenized_csv</i> |
|--------------------|---------------------------|

Description

Utility function to quickly load a tokenized csv and the corresponding counter

Usage

```
load_tokenized_csv(fname)
```

Arguments

| | |
|-------|-----------|
| fname | file name |
|-------|-----------|

Value

None

| | |
|-----|------------|
| log | <i>Log</i> |
|-----|------------|

Description

Log

Usage

```
## S3 method for class 'torch.Tensor'  
log(x, base = exp(1))
```

Arguments

| | |
|------|----------------|
| x | tensor |
| base | base parameter |

Value

tensor

log.fastai.torch_core.TensorMask

Log

Description

Log

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
log(x, base = exp(1))
```

Arguments

| | |
|------|----------------|
| x | tensor |
| base | base parameter |

Value

tensor

log1p

Log1p

Description

Log1p

Usage

```
## S3 method for class 'torch.Tensor'  
log1p(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

log1p.fastai.torch_core.TensorMask
Log1p

Description

Log1p

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
log1p(x)
```

Arguments

x tensor

Value

tensor

logical_and *Logical_and*

Description

Logical_and

Usage

```
## S3 method for class 'torch.Tensor'  
x & y
```

Arguments

x tensor
y tensor

Value

tensor

| | |
|--------------|--------------------|
| logical_not_ | <i>Logical_not</i> |
|--------------|--------------------|

Description

Logical_not

Usage

```
## S3 method for class 'torch.Tensor'  
!x
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

| | |
|------------|-------------------|
| logical_or | <i>Logical_or</i> |
|------------|-------------------|

Description

Logical_or

Usage

```
## S3 method for class 'torch.Tensor'  
x | y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

| | |
|-------|--------------------|
| login | <i>Wandb login</i> |
|-------|--------------------|

Description

Log in to W&B.

Usage

```
login(anonymous = NULL, key = NULL, relogin = NULL, host = NULL, force = NULL)
```

Arguments

| | |
|-----------|---|
| anonymous | must,never,allow,false,true |
| key | API key (secret) |
| relogin | relogin or not |
| host | host address |
| force | whether to force a user to be logged into wandb when running a script |

Value

None

| | |
|-----------|------------------|
| Lookahead | <i>Lookahead</i> |
|-----------|------------------|

Description

Lookahead

Usage

```
Lookahead(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

| | |
|------------|-------------------|
| LossMetric | <i>LossMetric</i> |
|------------|-------------------|

Description

Create a metric from 'loss_func.attr' named 'nm'

Usage

```
LossMetric(attr, nm = NULL)
```

Arguments

| | |
|------|------|
| attr | attr |
| nm | nm |

Value

None

| | |
|---------|----------------|
| lr_find | <i>Lr_find</i> |
|---------|----------------|

Description

Launch a mock training to find a good learning rate, return lr_min, lr_steep if 'suggestions' is TRUE

Usage

```
lr_find(
  object,
  start_lr = 1e-07,
  end_lr = 10,
  num_it = 100,
  stop_div = TRUE,
  ...
)
```

Arguments

| | |
|----------|------------------------------|
| object | learner |
| start_lr | starting learning rate |
| end_lr | end learning rate |
| num_it | number of iterations |
| stop_div | stop div or not |
| ... | additional arguments to pass |

Value

data frame

Examples

```
## Not run:

model %>% lr_find()
model %>% plot_lr_find(dpi = 200)

## End(Not run)
```

| | |
|-----|------------|
| mae | <i>MAE</i> |
|-----|------------|

Description

Mean absolute error between ‘inp’ and ‘targ’.

Usage

```
mae(inp, targ)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |

Value

None

| | |
|------------|-------------------|
| make_vocab | <i>Make_vocab</i> |
|------------|-------------------|

Description

Create a vocab of ‘max_vocab’ size from ‘Counter’ ‘count’ with items present more than ‘min_freq’

Usage

```
make_vocab(count, min_freq = 3, max_vocab = 60000, special_toks = NULL)
```

Arguments

| | |
|--------------|--------------|
| count | count |
| min_freq | min_freq |
| max_vocab | max_vocab |
| special_toks | special_toks |

Value

None

| | |
|-----------|------------------|
| mask2bbox | <i>Mask2bbox</i> |
|-----------|------------------|

Description

Mask2bbox

Usage

mask2bbox(mask, convert = TRUE)

Arguments

| | |
|---------|-------------|
| mask | mask |
| convert | to R matrix |

Value

tensor

| | |
|-----------|------------------|
| MaskBlock | <i>MaskBlock</i> |
|-----------|------------------|

Description

A ‘TransformBlock’ for segmentation masks, potentially with ‘codes’

Usage

MaskBlock(codes = NULL)

Arguments

| | |
|-------|-------|
| codes | codes |
|-------|-------|

Value

block

| | |
|--------------------|---------------------------|
| masked_concat_pool | <i>Masked_concat_pool</i> |
|--------------------|---------------------------|

Description

Pool 'MultiBatchEncoder' outputs into one vector [last_hidden, max_pool, avg_pool]

Usage

```
masked_concat_pool(output, mask, bptt)
```

Arguments

| | |
|--------|--------|
| output | output |
| mask | mask |
| bptt | bptt |

Value

None

| | |
|----------|------------------|
| MaskFreq | <i>Mask Freq</i> |
|----------|------------------|

Description

Google SpecAugment frequency masking from <https://arxiv.org/abs/1904.08779>.

Usage

```
MaskFreq(num_masks = 1, size = 20, start = NULL, val = NULL)
```

Arguments

| | |
|-----------|-----------------|
| num_masks | number of masks |
| size | size |
| start | starting point |
| val | value |

Value

None

| | |
|----------|-----------------|
| MaskTime | <i>MaskTime</i> |
|----------|-----------------|

Description

Google SpecAugment time masking from <https://arxiv.org/abs/1904.08779>.

Usage

```
MaskTime(num_masks = 1, size = 20, start = NULL, val = NULL)
```

Arguments

| | |
|-----------|-----------------|
| num_masks | number of masks |
| size | size |
| start | starting point |
| val | value |

Value

None

| | |
|-------------|--------------------|
| Mask_create | <i>Mask_create</i> |
|-------------|--------------------|

Description

Delegates (`'__call__'`, `'decode'`, `'setup'`) to (`'encodes'`, `'decodes'`, `'setups'`) if `'split_idx'` matches

Usage

```
Mask_create(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|-----------|----------------|
| enc | encoder |
| dec | decoder |
| split_idx | split by index |
| order | order |

Value

None

| | |
|----------------|-----------------------|
| mask_from_blur | <i>Mask from blur</i> |
|----------------|-----------------------|

Description

Mask from blur

Usage

```
mask_from_blur(img, window, sigma = 0.3, thresh = 0.05, remove_max = TRUE)
```

Arguments

| | |
|------------|-----------------------|
| img | image |
| window | windowing effect |
| sigma | sigma |
| thresh | threshold point |
| remove_max | remove maximum or not |

| | |
|--------------------|-----------------------------------|
| mask_rcnn_infer_dl | <i>Mask RCNN infer dataloader</i> |
|--------------------|-----------------------------------|

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for inferring the model.

Usage

```
mask_rcnn_infer_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|---|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. **dataloader_kwargs : Keyword arguments that will be internally passed to a Pytorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |
| ... | additional arguments |

Value

None

| | |
|-------------------|-------------------------|
| mask_rcnn_learner | <i>MaskRCNN learner</i> |
|-------------------|-------------------------|

Description

Fastai ‘Learner’ adapted for MaskRCNN.

Usage

```
mask_rcnn_learner(dls, model, cbs = NULL, ...)
```

Arguments

| | |
|-------|---|
| dls | ‘Sequence’ of ‘DataLoaders’ passed to the ‘Learner’. The first one will be used for training and the second for validation. |
| model | The model to train. |
| cbs | Optional ‘Sequence’ of callbacks. |
| ... | learner_kwargs: Keyword arguments that will be internally passed to ‘Learner’. |

Value

model

| | |
|-----------------|-----------------------|
| mask_rcnn_model | <i>MaskRCNN model</i> |
|-----------------|-----------------------|

Description

MaskRCNN model implemented by torchvision.

Usage

```
mask_rcnn_model(  
    num_classes,  
    backbone = NULL,  
    remove_internal_transforms = TRUE,  
    pretrained = TRUE  
)
```

Arguments

| | |
|----------------------------|--|
| num_classes | Number of classes. |
| backbone | Backbone model to use. Defaults to a resnet50_fpn model. |
| remove_internal_transforms | The torchvision model internally applies transforms like resizing and normalization, but we already do this at the 'Dataset' level, so it's safe to remove those internal transforms. |
| pretrained | Argument passed to 'maskrcnn_resnet50_fpn' if 'backbone is NULL'. By default it is set to TRUE: this is generally used when training a new model (transfer learning). 'pretrained = FALSE' is used during inference (prediction) for cases where the users have their own pretrained weights. **mask_rcnn_kwargs : Keyword arguments that internally are going to be passed to 'torchvision.models.detection.mask_rcnn.MaskRCNN'. |

Value

model

mask_rcnn_predict_dl *Mask RCNN predict dataloader*

Description

Mask RCNN predict dataloader

Usage

```
mask_rcnn_predict_dl(model, infer_dl, show_pbar = TRUE)
```

Arguments

| | |
|-----------|-----------|
| model | model |
| infer_dl | infer_dl |
| show_pbar | show_pbar |

Value

None

mask_rcnn_train_dl *MaskRCNN train dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
mask_rcnn_train_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

mask_rcnn_valid_dl *MaskRSNN valid dataloader*

Description

A ‘DataLoader’ with a custom ‘collate_fn’ that batches items as required for training the model.

Usage

```
mask_rcnn_valid_dl(dataset, batch_tfms = NULL, ...)
```

Arguments

| | |
|------------|--|
| dataset | Possibly a ‘Dataset’ object, but more generally, any ‘Sequence’ that returns records. |
| batch_tfms | Transforms to be applied at the batch level. |
| ... | dataloader_kwargs: Keyword arguments that will be internally passed to a PyTorch ‘DataLoader’. The parameter ‘collate_fn’ is already defined internally and cannot be passed here. |

Value

None

| | |
|-------------|--------------------|
| mask_tensor | <i>Mask_tensor</i> |
|-------------|--------------------|

Description

Mask elements of 'x' with 'neutral' with probability '1-p'

Usage

```
mask_tensor(x, p = 0.5, neutral = 0, batch = FALSE)
```

Arguments

| | |
|---------|-------------|
| x | tensor |
| p | probability |
| neutral | neutral |
| batch | batch |

Value

None

| | |
|--------------|---------------------|
| match_embeds | <i>Match_embeds</i> |
|--------------|---------------------|

Description

Convert the embedding in 'old_wgts' to go from 'old_vocab' to 'new_vocab'.

Usage

```
match_embeds(old_wgts, old_vocab, new_vocab)
```

Arguments

| | |
|-----------|-----------|
| old_wgts | old_wgts |
| old_vocab | old_vocab |
| new_vocab | new_vocab |

Value

None

| | |
|------------------|-------------------------|
| MatthewsCorrCoef | <i>MatthewsCorrCoef</i> |
|------------------|-------------------------|

Description

Matthews correlation coefficient for single-label classification problems

Usage

```
MatthewsCorrCoef(...)
```

Arguments

```
...           parameters to pass
```

Value

None

| | |
|-----------------------|------------------------------|
| MatthewsCorrCoefMulti | <i>MatthewsCorrCoefMulti</i> |
|-----------------------|------------------------------|

Description

Matthews correlation coefficient for multi-label classification problems

Usage

```
MatthewsCorrCoefMulti(thresh = 0.5, sigmoid = TRUE, sample_weight = NULL)
```

Arguments

```
thresh      thresh
sigmoid     sigmoid
sample_weight sample_weight
```

Value

None

| | |
|-----|------------|
| max | <i>Max</i> |
|-----|------------|

Description

Max

Usage

```
## S3 method for class 'torch.Tensor'
max(a, ..., na.rm = FALSE)
```

Arguments

| | |
|-------|-----------------------|
| a | tensor |
| ... | additional parameters |
| na.rm | remove NAs |

Value

tensor

| | |
|----------------------------------|------------|
| max.fastai.torch_core.TensorMask | <i>Max</i> |
|----------------------------------|------------|

Description

Max

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
max(a, ..., na.rm = FALSE)
```

Arguments

| | |
|-------|-----------------------|
| a | tensor |
| ... | additional parameters |
| na.rm | remove NAs |

Value

tensor

| | |
|---------|----------------|
| MaxPool | <i>MaxPool</i> |
|---------|----------------|

Description

nn.MaxPool layer for 'ndim'

Usage

```
MaxPool(ks = 2, stride = NULL, padding = 0, ndim = 2, ceil_mode = FALSE)
```

Arguments

| | |
|-----------|---|
| ks | kernel size |
| stride | the stride of the window. Default value is kernel_size |
| padding | implicit zero padding to be added on both sides |
| ndim | dimension number |
| ceil_mode | when True, will use ceil instead of floor to compute the output shape |

Value

None

| | |
|-----------------|------------------------|
| maybe_unsqueeze | <i>Maybe_unsqueeze</i> |
|-----------------|------------------------|

Description

Add empty dimension if it is a rank 1 tensor/array

Usage

```
maybe_unsqueeze(x)
```

Arguments

| | |
|---|-----------------------|
| x | R array/matrix/tensor |
|---|-----------------------|

Value

array

| | |
|-------------------|--------------------------|
| MCDropoutCallback | <i>MCDropoutCallback</i> |
|-------------------|--------------------------|

Description

Turns on dropout during inference, allowing you to call `Learner$get_preds` multiple times to approximate your model uncertainty using Monte Carlo Dropout. <https://arxiv.org/pdf/1506.02142.pdf>

Usage

```
MCDropoutCallback(...)
```

Arguments

... arguments to pass

Value

None

| | |
|--|-----------------------|
| <code>mean.fastai.torch_core.TensorMask</code> | <i>Mean of tensor</i> |
|--|-----------------------|

Description

Mean of tensor

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
mean(x, ...)
```

Arguments

x tensor
... additional parameters to pass

Value

tensor

mean.torch.Tensor *Mean of tensor*

Description

Mean of tensor

Usage

```
## S3 method for class 'torch.Tensor'  
mean(x, ...)
```

Arguments

x tensor
... additional parameters to pass

Value

tensor

medical *Medical module*

Description

Medical module

Usage

```
medical()
```

Value

None

| | |
|------------|-------------------|
| MergeLayer | <i>MergeLayer</i> |
|------------|-------------------|

Description

Merge a shortcut with the result of the module by adding them or concatenating them if 'dense=TRUE'.

Usage

```
MergeLayer(dense = FALSE)
```

Arguments

| | |
|-------|-------|
| dense | dense |
|-------|-------|

Value

None

| | |
|---------|-----------------------|
| metrics | <i>Metrics module</i> |
|---------|-----------------------|

Description

Metrics module

Usage

```
metrics()
```

Value

None

| | |
|------------------|----------------------|
| migrating_ignite | <i>Ignite module</i> |
|------------------|----------------------|

Description

Ignite module

Usage

```
migrating_ignite()
```

Value

None

migrating_lightning *Lightning module*

Description

Lightning module

Usage

migrating_lightning()

Value

None

migrating_pytorch *Pytorch module*

Description

Pytorch module

Usage

migrating_pytorch()

Value

None

min *Min*

Description

Min

Usage

```
## S3 method for class 'torch.Tensor'  
min(a, ..., na.rm = FALSE)
```

Arguments

| | |
|-------|-----------------------|
| a | tensor |
| ... | additional parameters |
| na.rm | remove NAs |

Value

tensor

min.fastai.torch_core.TensorMask
Min

Description

Min

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
min(a, ..., na.rm = FALSE)
```

Arguments

| | |
|-------|-----------------------|
| a | tensor |
| ... | additional parameters |
| na.rm | remove NAs |

Value

tensor

mish *Mish*

Description

Mish

Usage

mish(x)

Arguments

x tensor

Value

None

MishJitAutoFn

MishJitAutoFn

Description

Records operation history and defines formulas for differentiating ops.

Usage

MishJitAutoFn(...)

Arguments

... parameters to pass

Value

None

Mish_

Class Mish

Description

Class Mish

Usage

Mish_(...)

Arguments

... parameters to pass

Value

None

MixHandler

MixHandler

Description

A handler class for implementing ‘MixUp’ style scheduling

Usage

```
MixHandler(alpha = 0.5)
```

Arguments

alpha alpha

Value

None

MixUp

MixUp

Description

Implementation of <https://arxiv.org/abs/1710.09412>

Usage

```
MixUp(alpha = 0.4)
```

Arguments

alpha alpha

Value

None

ModelResetter

ModelResetter

Description

Callback that resets the model at each validation/training step

Usage

```
ModelResetter(...)
```

Arguments

... arguments to pass

Value

None

model_sizes

Model_sizes

Description

Pass a dummy input through the model 'm' to get the various sizes of activations.

Usage

```
model_sizes(m, size = list(64, 64))
```

Arguments

m m parameter

size size

Value

None

| | |
|--------|----------------------|
| Module | <i>Module module</i> |
|--------|----------------------|

Description

Module module

Usage

Module()

Value

None

| | |
|-------------|------------------|
| Module_test | <i>NN module</i> |
|-------------|------------------|

Description

NN module

Usage

Module_test()

Value

None

| | |
|---------------|----------------------|
| momentum_step | <i>Momentum_step</i> |
|---------------|----------------------|

Description

Step for SGD with momentum with 'lr'

Usage

momentum_step(p, lr, grad_avg, ...)

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| grad_avg | grad average |
| ... | additional arguments to pass |

Value

None

| | |
|---------------|----------------------|
| most_confused | <i>Most_confused</i> |
|---------------|----------------------|

Description

Sorted descending list of largest non-diagonal entries of confusion matrix, presented as actual, predicted, number of occurrences.

Usage

```
most_confused(interp, min_val = 1)
```

Arguments

| | |
|---------|-----------------------|
| interp | interpretation object |
| min_val | minimum value |

Value

data frame

| | |
|-----|------------|
| mse | <i>MSE</i> |
|-----|------------|

Description

Mean squared error between 'inp' and 'targ'.

Usage

```
mse(inp, targ)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |

Value

None

Examples

```
## Not run:  
  
model = dls %>% tabular_learner(layers=c(200,100,100,200),  
metrics = list(mse(),rmse() )  
  
## End(Not run)
```

MSELossFlat

MSELossFlat

Description

Flattens input and output, same as nn\$MSELoss

Usage

```
MSELossFlat(...)
```

Arguments

... parameters to pass

Value

Loss object

| | |
|------|-------------|
| msle | <i>MSLE</i> |
|------|-------------|

Description

Mean squared logarithmic error between 'inp' and 'targ'.

Usage

```
msle(inp, targ)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |

Value

None

| | |
|-----------------|------------------------|
| MultiCategorize | <i>MultiCategorize</i> |
|-----------------|------------------------|

Description

Reversible transform of multi-category strings to 'vocab' id

Usage

```
MultiCategorize(vocab = NULL, add_na = FALSE)
```

Arguments

| | |
|--------|------------|
| vocab | vocabulary |
| add_na | add NA |

Value

None

MultiCategoryBlock *MultiCategoryBlock*

Description

‘TransformBlock’ for multi-label categorical targets

Usage

```
MultiCategoryBlock(encoded = FALSE, vocab = NULL, add_na = FALSE)
```

Arguments

| | |
|---------|----------------|
| encoded | encoded or not |
| vocab | vocabulary |
| add_na | add NA |

Value

Block object

```
multiplygit add -A && git commit -m 'staging all files'
```

Multiply

Description

Multiply

Usage

```
## S3 method for class 'torch.Tensor'
a * b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|-----------------|------------------------|
| MultiTargetLoss | <i>MultiTargetLoss</i> |
|-----------------|------------------------|

Description

Provides the ability to apply different loss functions to multi-modal targets/predictions

Usage

```
MultiTargetLoss(...)
```

Arguments

... additional arguments

Value

None

| | |
|--------|----------------------|
| narrow | <i>Modify tensor</i> |
|--------|----------------------|

Description

Modify tensor

Usage

```
narrow(tensor, slice)
```

Arguments

tensor torch tensor

slice dimension

Value

tensor

Net

Net

Description

Net model from Migrating_Pytorch

Usage

Net()

Value

model

Examples

```
## Not run:  
  
Net()  
  
## End(Not run)
```

nn

NN module

Description

NN module

Usage

nn()

Value

None

| | |
|---------|---------------------------|
| nn_loss | <i>Fastai custom loss</i> |
|---------|---------------------------|

Description

Fastai custom loss

Usage

```
nn_loss(loss_fn, name = "Custom_Loss")
```

Arguments

| | |
|---------|----------------------------|
| loss_fn | pass custom model function |
| name | set name for nn_module |

Value

None

| | |
|-----------|-------------------------|
| nn_module | <i>Fastai NN module</i> |
|-----------|-------------------------|

Description

Fastai NN module

Usage

```
nn_module(model_fn, name = "Custom_Model", gpu = TRUE)
```

Arguments

| | |
|----------|----------------------------|
| model_fn | pass custom model function |
| name | set name for nn_module |
| gpu | move model to GPU |

Value

None

| | |
|------------|--------------------------|
| NoiseColor | <i>NoiseColor module</i> |
|------------|--------------------------|

Description

NoiseColor module

Usage

NoiseColor()

Value

None

| | |
|------------|-------------------|
| NoneReduce | <i>NoneReduce</i> |
|------------|-------------------|

Description

A context manager to evaluate 'loss_func' with none reduce.

Usage

NoneReduce(loss_func)

Arguments

loss_func loss function

Value

None

 noop
*Noop***Description**

Noop

Usage

noop(...)

Arguments

... parameters to pass

Value

None

 Normalize
*Normalize***Description**

Normalize the continuous variables.

Usage

Normalize(cat_names, cont_names)

Arguments

cat_names cat_names

cont_names cont_names

Value

None

| | |
|-------------|--------------------|
| NormalizeTS | <i>NormalizeTS</i> |
|-------------|--------------------|

Description

Normalize the x variables.

Usage

```
NormalizeTS(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|-----------|----------------|
| enc | encoder |
| dec | decoder |
| split_idx | split by index |
| order | order |

Value

None

| | |
|----------------------|-----------------------------|
| Normalize_from_stats | <i>Normalize from stats</i> |
|----------------------|-----------------------------|

Description

Normalize from stats

Usage

```
Normalize_from_stats(mean, std, dim = 1, ndim = 4, cuda = TRUE)
```

Arguments

| | |
|------|----------------------|
| mean | mean |
| std | standard deviation |
| dim | dimension |
| ndim | number of dimensions |
| cuda | cuda or not |

Value

list

| | |
|-------------------|--------------------------|
| norm_apply_denorm | <i>Norm_apply_denorm</i> |
|-------------------|--------------------------|

Description

Normalize 'x' with 'nrm', then apply 'f', then denormalize

Usage

```
norm_apply_denorm(x, f, nrm)
```

Arguments

| | |
|-----|----------|
| x | tensor |
| f | function |
| nrm | nrm |

Value

None

| | |
|--------------|------------------|
| not_equal_to | <i>Not equal</i> |
|--------------|------------------|

Description

Not equal

Usage

```
## S3 method for class 'torch.Tensor'  
a != b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|--------------------|------------------|
| not_equal_to_mask_ | <i>Not equal</i> |
|--------------------|------------------|

Description

Not equal

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
a != b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|-----------|--------------------|
| not__mask | <i>Logical_not</i> |
|-----------|--------------------|

Description

Logical_not

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
!x
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

| | |
|--------------|---------------------|
| Numericalize | <i>Numericalize</i> |
|--------------|---------------------|

Description

Reversible transform of tokenized texts to numericalized ids

Usage

```
Numericalize(
  vocab = NULL,
  min_freq = 3,
  max_vocab = 60000,
  special_toks = NULL,
  pad_tok = NULL
)
```

Arguments

| | |
|--------------|--------------|
| vocab | vocab |
| min_freq | min_freq |
| max_vocab | max_vocab |
| special_toks | special_toks |
| pad_tok | pad_tok |

Value

None

| | |
|--------------------|---------------------------|
| num_features_model | <i>Num_features_model</i> |
|--------------------|---------------------------|

Description

Return the number of output features for 'm'.

Usage

```
num_features_model(m)
```

Arguments

| | |
|---|-------------|
| m | m parameter |
|---|-------------|

Value

None

n_px

N_px

Description

int(x=0) -> integer

Usage

n_px(img)

Arguments

img image

Value

None

OldRandomCrop

OldRandomCrop

Description

Randomly crop an image to 'size'

Usage

OldRandomCrop(size, pad_mode = "zeros", ...)

Arguments

size size
pad_mode padding mode
... additional arguments

Value

None

one_batch *One batch*

Description

One batch

Usage

```
one_batch(object, convert = FALSE, ...)
```

Arguments

| | |
|---------|-------------------------------|
| object | data loader |
| convert | to R matrix |
| ... | additional parameters to pass |

Value

tensor

Examples

```
## Not run:  
  
# get batch from data loader  
batch = dls %>% one_batch()  
  
## End(Not run)
```

OpenAudio *OpenAudio*

Description

Transform that creates AudioTensors from a list of files.

Usage

```
OpenAudio(items)
```

Arguments

| | |
|-------|---------------|
| items | vector, items |
|-------|---------------|

Value

None

`Optimizer`*Optimizer*

Description

Optimizer

Usage`Optimizer(...)`**Arguments**

... parameters to pass

Value

None

`OptimWrapper`*OptimWrapper*

Description

OptimWrapper

Usage`OptimWrapper(...)`**Arguments**

... parameters to pass

Value

None

| | |
|--------------|---------------------|
| optim_metric | <i>Optim metric</i> |
|--------------|---------------------|

Description

Replace metric 'f' with a version that optimizes argument 'argname'

Usage

```
optim_metric(f, argname, bounds, tol = 0.01, do_neg = TRUE, get_x = FALSE)
```

Arguments

| | |
|---------|---------|
| f | f |
| argname | argname |
| bounds | bounds |
| tol | tol |
| do_neg | do_neg |
| get_x | get_x |

Value

None

| | |
|---------|-------------------|
| or_mask | <i>Logical_or</i> |
|---------|-------------------|

Description

Logical_or

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
x | y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

| | |
|----|-------------------------|
| os | <i>Operating system</i> |
|----|-------------------------|

Description

Operating system

Usage

os()

Value

vector

| | |
|----------------|---------------------------------------|
| os_environ_tpu | <i>An environment supporting TPUs</i> |
|----------------|---------------------------------------|

Description

An environment supporting TPUs

Usage

```
os_environ_tpu(text = "COLAB_TPU_ADDR")
```

Arguments

text string to pass to environment

Value

None

pad_conv_norm_relu *Pad_conv_norm_relu*

Description

Pad_conv_norm_relu

Usage

```
pad_conv_norm_relu(  
  ch_in,  
  ch_out,  
  pad_mode,  
  norm_layer,  
  ks = 3,  
  bias = TRUE,  
  pad = 1,  
  stride = 1,  
  activ = TRUE,  
  init = nn()$init$kaiming_normal_,  
  init_gain = 0.02  
)
```

Arguments

| | |
|------------|---------------------|
| ch_in | input |
| ch_out | output |
| pad_mode | padding mode |
| norm_layer | normalization layer |
| ks | kernel size |
| bias | bias |
| pad | padding |
| stride | stride |
| activ | activation |
| init | initializer |
| init_gain | init gain |

Value

None

| | |
|-----------|------------------|
| pad_input | <i>Pad_input</i> |
|-----------|------------------|

Description

Function that collect 'samples' and adds padding

Usage

```
pad_input(
    samples,
    pad_idx = 1,
    pad_fields = 0,
    pad_first = FALSE,
    backwards = FALSE
)
```

Arguments

| | |
|------------|------------|
| samples | samples |
| pad_idx | pad_idx |
| pad_fields | pad_fields |
| pad_first | pad_first |
| backwards | backwards |

Value

None

| | |
|-----------------|------------------------|
| pad_input_chunk | <i>Pad_input_chunk</i> |
|-----------------|------------------------|

Description

Pad 'samples' by adding padding by chunks of size 'seq_len'

Usage

```
pad_input_chunk(samples, pad_idx = 1, pad_first = TRUE, seq_len = 72)
```

Arguments

| | |
|-----------|-----------|
| samples | samples |
| pad_idx | pad_idx |
| pad_first | pad_first |
| seq_len | seq_len |

Value

None

| | |
|----------|-----------------|
| parallel | <i>Parallel</i> |
|----------|-----------------|

Description

Applies ‘func’ in parallel to ‘items’, using ‘n_workers’

Usage

```
parallel(f, items, ...)
```

Arguments

| | |
|-------|----------------------|
| f | file names |
| items | items |
| ... | additional arguments |

Value

None

| | |
|-------------------|--------------------------|
| parallel_tokenize | <i>Parallel_tokenize</i> |
|-------------------|--------------------------|

Description

Calls optional ‘setup’ on ‘tok’ before launching ‘TokenizeWithRules’ using ‘parallel_gen

Usage

```
parallel_tokenize(items, tok = NULL, rules = NULL, n_workers = 6)
```

Arguments

| | |
|-----------|-----------|
| items | items |
| tok | tokenizer |
| rules | rules |
| n_workers | n_workers |

Value

None

params

Params

Description

Return all parameters of 'm'

Usage

params(m)

Arguments

m parameters

Value

None

ParamScheduler

ParamScheduler

Description

Schedule hyper-parameters according to 'scheds'

Usage

ParamScheduler(scheds)

Arguments

scheds scheds

Value

None

parent_label *Parent_label*

Description

Label 'item' with the parent folder name.

Usage

```
parent_label(o)
```

Arguments

o string, dir path

Value

vector

parsers_AreasMixin *AreasMixin*

Description

Adds areas method to parser

Usage

```
parsers_AreasMixin(...)
```

Arguments

... arguments to pass

Value

None

`parsers_BBoxesMixin` *BBoxesMixin*

Description

Adds bboxes method to parser

Usage

`parsers_BBoxesMixin(...)`

Arguments

... arguments to pass

Value

None

`parsers_FasterRCNN` *Faster RCNN*

Description

Parser with required mixins for Faster RCNN.

Usage

`parsers_FasterRCNN(...)`

Arguments

... arguments to pass

Value

None

parsers_FilepathMixin *FilepathMixin*

Description

Adds filepath method to parser

Usage

```
parsers_FilepathMixin(...)
```

Arguments

... arguments to pass

Value

None

parsers_ImageidMixin *Imageid Mixin*

Description

Adds imageid method to parser

Usage

```
parsers_ImageidMixin(...)
```

Arguments

... arguments to pass

Value

None

parsers_IsCrowdsMixin *IsCrowdsMixin*

Description

Adds iscrowds method to parser

Usage

`parsers_IsCrowdsMixin(...)`

Arguments

... arguments to pass

Value

None

parsers_LabelsMixin *LabelsMixin*

Description

Adds labels method to parser

Usage

`parsers_LabelsMixin(...)`

Arguments

... arguments to pass

Value

None

`parsers_MaskRCNN` *Mask RCNN*

Description

Parser with required mixins for Mask RCNN.

Usage

```
parsers_MaskRCNN(...)
```

Arguments

... arguments to pass

Value

None

`parsers_MasksMixin` *MasksMixin*

Description

Adds masks method to parser

Usage

```
parsers_MasksMixin(...)
```

Arguments

... arguments to pass

Value

None

parsers_SizeMixin *SizeMixin*

Description

Adds image_width_height method to parser

Usage

`parsers_SizeMixin(...)`

Arguments

... arguments to pass

Value

None

parsers_voc *Voc parser*

Description

Voc parser

Usage

`parsers_voc(annotations_dir, images_dir, class_map, masks_dir = NULL)`

Arguments

annotations_dir annotations_dir
 images_dir images_dir
 class_map class_map
 masks_dir masks_dir

Value

None

| | |
|---------|----------------|
| partial | <i>Partial</i> |
|---------|----------------|

Description

partial(func, *args, **keywords) - new function with partial application

Usage

```
partial(...)
```

Arguments

```
... additional arguments
```

Value

None

Examples

```
## Not run:

generator = basic_generator(out_size = 64, n_channels = 3, n_extra_layers = 1)
critic     = basic_critic(in_size = 64, n_channels = 3, n_extra_layers = 1,
                          act_cls = partial(nn$LeakyReLU, negative_slope = 0.2))

## End(Not run)
```

| | |
|-----------|------------------|
| PartialDL | <i>PartialDL</i> |
|-----------|------------------|

Description

Select randomly partial quantity of data at each epoch

Usage

```
PartialDL(
  dataset = NULL,
  bs = NULL,
  partial_n = NULL,
  shuffle = FALSE,
  num_workers = NULL,
```

```

    verbose = FALSE,
    do_setup = TRUE,
    pin_memory = FALSE,
    timeout = 0,
    batch_size = NULL,
    drop_last = FALSE,
    indexed = NULL,
    n = NULL,
    device = NULL,
    persistent_workers = FALSE
  )

```

Arguments

| | |
|--------------------|--------------------|
| dataset | dataset |
| bs | bs |
| partial_n | partial_n |
| shuffle | shuffle |
| num_workers | num_workers |
| verbose | verbose |
| do_setup | do_setup |
| pin_memory | pin_memory |
| timeout | timeout |
| batch_size | batch_size |
| drop_last | drop_last |
| indexed | indexed |
| n | n |
| device | device |
| persistent_workers | persistent_workers |

Value

None

 PartialLambda

Partial Lambda

Description

Layer that applies ‘partial(func, ...)’

Usage

```
PartialLambda(func)
```

Arguments

```
func          function
```

Value

```
None
```

```
pca          PCA
```

Description

Compute PCA of 'x' with 'k' dimensions.

Usage

```
pca(object, k = 3, convert = TRUE)
```

Arguments

```
object      an object to apply PCA
k           number of dimensions
convert     to R matrix
```

Value

```
tensor
```

```
PearsonCorrCoef    PearsonCorrCoef
```

Description

Pearson correlation coefficient for regression problem

Usage

```
PearsonCorrCoef(  
  dim_argmax = NULL,  
  activation = "no",  
  thresh = NULL,  
  to_np = FALSE,  
  invert_arg = FALSE,  
  flatten = TRUE  
)
```

Arguments

| | |
|------------|------------|
| dim_argmax | dim_argmax |
| activation | activation |
| thresh | thresh |
| to_np | to_np |
| invert_arg | invert_arg |
| flatten | flatten |

Value

None

Perplexity

Perplexity

Description

Perplexity

Usage

```
Perplexity(...)
```

Arguments

... parameters to pass

Value

None

| | |
|----------|-----------------|
| Pipeline | <i>Pipeline</i> |
|----------|-----------------|

Description

A pipeline of composed (for encode/decode) transforms, setup with types

Usage

```
Pipeline(funcs = NULL, split_idx = NULL)
```

Arguments

| | |
|-----------|----------------|
| funcs | functions |
| split_idx | split by index |

Value

None

| | |
|-------------------|--------------------------|
| PixelShuffle_ICNR | <i>PixelShuffle_ICNR</i> |
|-------------------|--------------------------|

Description

Upsample by 'scale' from 'ni' filters to 'nf' (default 'ni'), using 'nn.PixelShuffle'.

Usage

```
PixelShuffle_ICNR(
  ni,
  nf = NULL,
  scale = 2,
  blur = FALSE,
  norm_type = 3,
  act_cls = nn()$ReLU
)
```

Arguments

| | |
|-----------|------------------------------|
| ni | input shape |
| nf | number of features / outputs |
| scale | scale |
| blur | blur |
| norm_type | normalziation type |
| act_cls | activation |

Value

None

| | |
|------|-------------------|
| plot | <i>Plot dicom</i> |
|------|-------------------|

Description

Plot dicom

Usage`plot(x, y, ..., dpi = 100)`**Arguments**

| | |
|-----|--------------------|
| x | model |
| y | y axis |
| ... | parameters to pass |
| dpi | dots per inch |

Value

None

| | |
|--------------|---------------------|
| plot_bs_find | <i>Plot_bs_find</i> |
|--------------|---------------------|

Description

Plot_bs_find

Usage`plot_bs_find(object, ..., dpi = 250)`**Arguments**

| | |
|--------|----------------------|
| object | model |
| ... | additional arguments |
| dpi | dots per inch |

Value

None

plot_confusion_matrix *Plot_confusion_matrix*

Description

Plot the confusion matrix, with 'title' and using 'cmap'.

Usage

```
plot_confusion_matrix(  
  interp,  
  normalize = FALSE,  
  title = "Confusion matrix",  
  cmap = "Blues",  
  norm_dec = 2,  
  plot_txt = TRUE,  
  figsize = c(4, 4),  
  ...,  
  dpi = 120  
)
```

Arguments

| | |
|-----------|-------------------------------|
| interp | interpretation object |
| normalize | normalize |
| title | title |
| cmap | color map |
| norm_dec | norm dec |
| plot_txt | plot text |
| figsize | plot size |
| ... | additional parameters to pass |
| dpi | dots per inch |

Value

None

Examples

```
## Not run:  
  
interp = ClassificationInterpretation_from_learner(model)  
interp %>% plot_confusion_matrix(dpi = 90,figsize = c(6,6))
```

```
## End(Not run)
```

| | |
|-----------|------------------|
| plot_loss | <i>Plot_loss</i> |
|-----------|------------------|

Description

Plot the losses from ‘skip_start’ and onward

Usage

```
plot_loss(object, skip_start = 5, with_valid = TRUE, dpi = 200)
```

Arguments

| | |
|------------|----------------------------|
| object | model |
| skip_start | n points to skip the start |
| with_valid | with validation |
| dpi | dots per inch |

Value

None

| | |
|--------------|---------------------|
| plot_lr_find | <i>Plot_lr_find</i> |
|--------------|---------------------|

Description

Plot the result of an LR Finder test (won’t work if you didn’t do ‘lr_find(learn)’ before)

Usage

```
plot_lr_find(object, skip_end = 5, dpi = 250)
```

Arguments

| | |
|----------|--------------------------|
| object | model |
| skip_end | n points to skip the end |
| dpi | dots per inch |

Value

None

| | |
|-----------------|------------------------|
| plot_top_losses | <i>Plot_top_losses</i> |
|-----------------|------------------------|

Description

Plot_top_losses

Usage

```
plot_top_losses(interp, k, largest = TRUE, figsize = c(7, 5), ..., dpi = 90)
```

Arguments

| | |
|---------|-------------------------------|
| interp | interpretation object |
| k | number of images |
| largest | largest |
| figsize | plot size |
| ... | additional parameters to pass |
| dpi | dots per inch |

Value

None

Examples

```
## Not run:  
  
# get interperetation from learn object, the model.  
interp = ClassificationInterpretation_from_learner(learn)  
interp %>% plot_top_losses(k = 9, figsize = c(15,11))  
  
## End(Not run)
```

PointBlock

PointBlock

Description

A 'TransformBlock' for points in an image

Usage

```
PointBlock()
```

Value

None

PointScaler

PointScaler

Description

Scale a tensor representing points

Usage

```
PointScaler(do_scale = TRUE, y_first = FALSE)
```

Arguments

do_scale do scale

y_first y first

Value

None

PooledSelfAttention2d *PooledSelfAttention2d*

Description

Pooled self attention layer for 2d.

Usage

PooledSelfAttention2d(n_channels)

Arguments

n_channels number of channels

Value

None

PoolFlatten *PoolFlatten*

Description

Combine ‘nn.AdaptiveAvgPool2d‘ and ‘Flatten‘.

Usage

PoolFlatten(pool_type = "Avg")

Arguments

pool_type pooling type

Value

None

PoolingLinearClassifier
PoolingLinearClassifier

Description

Create a linear classifier with pooling

Usage

```
PoolingLinearClassifier(dims, ps, bptt, y_range = NULL)
```

Arguments

| | |
|---------|---------|
| dims | dims |
| ps | ps |
| bptt | bptt |
| y_range | y_range |

Value

None

| | |
|-----|------------|
| pow | <i>Pow</i> |
|-----|------------|

Description

Pow

Usage

```
## S3 method for class 'torch.Tensor'  
a ^ b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|-----------|------------------|
| Precision | <i>Precision</i> |
|-----------|------------------|

Description

Precision for single-label classification problems

Usage

```
Precision(
  axis = -1,
  labels = NULL,
  pos_label = 1,
  average = "binary",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

| | |
|----------------|-----------------------|
| PrecisionMulti | <i>PrecisionMulti</i> |
|----------------|-----------------------|

Description

Precision for multi-label classification problems

Usage

```
PrecisionMulti(
  thresh = 0.5,
  sigmoid = TRUE,
  labels = NULL,
  pos_label = 1,
  average = "macro",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| thresh | thresh |
| sigmoid | sigmoid |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

`predict.fastai.learner.Learner`
Predict

Description

Prediction on 'item', fully decoded, loss function decoded and probabilities

Usage

```
## S3 method for class 'fastai.learner.Learner'  
predict(object, row, ...)
```

Arguments

| | |
|--------|------------------------------|
| object | the model |
| row | row |
| ... | additional arguments to pass |

Value

data frame

```
predict.fastai.tabular.learner.TabularLearner
    Predict
```

Description

Prediction on 'item', fully decoded, loss function decoded and probabilities

Usage

```
## S3 method for class 'fastai.tabular.learner.TabularLearner'
predict(object, row, ...)
```

Arguments

| | |
|--------|------------------------------|
| object | the model |
| row | row |
| ... | additional arguments to pass |

Value

data frame

```
preplexity    Perplexity
```

Description

Perplexity (exponential of cross-entropy loss) for Language Models

Usage

```
preplexity(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

| | |
|-----------------|-------------------------|
| PreprocessAudio | <i>Preprocess Audio</i> |
|-----------------|-------------------------|

Description

Creates an audio tensor and run the basic preprocessing transforms on it.

Usage

```
PreprocessAudio(sample_rate = 16000, force_mono = TRUE, crop_signal_to = NULL)
```

Arguments

| | |
|----------------|-------------------|
| sample_rate | sample rate |
| force_mono | force mono or not |
| crop_signal_to | int, crop signal |

Details

Used while preprocessing the audios, this is not a 'Transform'.

Value

None

| | |
|-------------------------|--------------------------------|
| preprocess_audio_folder | <i>Preprocess audio folder</i> |
|-------------------------|--------------------------------|

Description

Preprocess audio files in 'path' in parallel using 'n_workers'

Usage

```
preprocess_audio_folder(  
  path,  
  folders = NULL,  
  output_dir = NULL,  
  sample_rate = 16000,  
  force_mono = TRUE,  
  crop_signal_to = NULL  
)
```

Arguments

| | |
|----------------|-------------------|
| path | directory, path |
| folders | folders |
| output_dir | output directory |
| sample_rate | sample rate |
| force_mono | force mono or not |
| crop_signal_to | int, crop signal |

Value

None

| | |
|-------------------|--------------------------|
| pre_process_squad | <i>Pre_process_squad</i> |
|-------------------|--------------------------|

Description

Pre_process_squad

Usage

```
pre_process_squad(row, hf_arch, hf_tokenizer)
```

Arguments

| | |
|--------------|------------------|
| row | row in dataframe |
| hf_arch | architecture |
| hf_tokenizer | tokenizer |

Value

None

```
print.fastai.learner.Learner  
    Print model
```

Description

Print model

Usage

```
## S3 method for class 'fastai.learner.Learner'  
print(x, ...)
```

Arguments

| | |
|-----|-------------------------------|
| x | object |
| ... | additional parameters to pass |

Value

None

```
print.fastai.tabular.learner.TabularLearner  
    Print tabular model
```

Description

Print tabular model

Usage

```
## S3 method for class 'fastai.tabular.learner.TabularLearner'  
print(x, ...)
```

Arguments

| | |
|-----|-------------------------------|
| x | model |
| ... | additional parameters to pass |

Value

None

```
print.pydicom.dataset.FileDataset  
    Dicom
```

Description

prints dicom file

Usage

```
## S3 method for class 'pydicom.dataset.FileDataset'  
print(x, ...)
```

Arguments

| | |
|-----|-------------------------------|
| x | dicom file |
| ... | additional parameters to pass |

Value

None

```
python_path    Python path
```

Description

Python path

Usage

```
python_path()
```

Value

None

py_apply

Py_apply

Description

Pandas apply

Usage

```
py_apply(df, ...)
```

Arguments

| | |
|-----|----------------------|
| df | dataframe |
| ... | additional arguments |

Value

dataframe

QHAdam

QHAdam

Description

QHAdam

Usage

```
QHAdam(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

| | |
|-------------|--------------------|
| qhadam_step | <i>Qhadam_step</i> |
|-------------|--------------------|

Description

Qhadam_step

Usage

qhadam_step(p, lr, mom, sqr_mom, sqr_avg, nu_1, nu_2, step, grad_avg, eps, ...)

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| mom | momentum |
| sqr_mom | sqr momentum |
| sqr_avg | sqr average |
| nu_1 | nu_1 |
| nu_2 | nu_2 |
| step | step |
| grad_avg | gradient average |
| eps | epsilon |
| ... | additional arguments to pass |

Value

None

| | |
|------|-------------|
| QRNN | <i>QRNN</i> |
|------|-------------|

Description

Apply a multiple layer Quasi-Recurrent Neural Network (QRNN) to an input sequence.

Usage

```
QRNN(  
    input_size,  
    hidden_size,  
    n_layers = 1,  
    batch_first = TRUE,  
    dropout = 0,  
    bidirectional = FALSE,  
    save_prev_x = FALSE,  
    zoneout = 0,  
    window = NULL,  
    output_gate = TRUE  
)
```

Arguments

| | |
|---------------|---------------|
| input_size | input_size |
| hidden_size | hidden_size |
| n_layers | n_layers |
| batch_first | batch_first |
| dropout | dropout |
| bidirectional | bidirectional |
| save_prev_x | save_prev_x |
| zoneout | zoneout |
| window | window |
| output_gate | output_gate |

Value

None

QRNNLayer

QRNNLayer

Description

Apply a single layer Quasi-Recurrent Neural Network (QRNN) to an input sequence.

Usage

```
QRNNLayer(
  input_size,
  hidden_size = NULL,
  save_prev_x = FALSE,
  zoneout = 0,
  window = 1,
  output_gate = TRUE,
  batch_first = TRUE,
  backward = FALSE
)
```

Arguments

| | |
|-------------|-------------|
| input_size | input_size |
| hidden_size | hidden_size |
| save_prev_x | save_prev_x |
| zoneout | zoneout |
| window | window |
| output_gate | output_gate |
| batch_first | batch_first |
| backward | backward |

Value

None

R2Score

R2Score

Description

R2 score between predictions and targets

Usage

```
R2Score(sample_weight = NULL)
```

Arguments

| | |
|---------------|---------------|
| sample_weight | sample_weight |
|---------------|---------------|

Value

None

| | |
|-------|--------------|
| RAdam | <i>RAdam</i> |
|-------|--------------|

Description

RAdam

Usage

RAdam(...)

Arguments

... parameters to pass

Value

None

| | |
|------------|-------------------|
| radam_step | <i>Radam_step</i> |
|------------|-------------------|

Description

Step for RAdam with 'lr' on 'p'

Usage

radam_step(p, lr, mom, step, sqr_mom, grad_avg, sqr_avg, eps, beta, ...)

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| mom | momentum |
| step | step |
| sqr_mom | sqr momentum |
| grad_avg | grad average |
| sqr_avg | sqr average |
| eps | epsilon |
| beta | beta |
| ... | additional arguments to pass |

Value

None

 RandomCrop

RandomCrop

Description

Randomly crop an image to 'size'

Usage

RandomCrop(size, ...)

Arguments

| | |
|------|----------------------|
| size | size |
| ... | additional arguments |

Value

None

RandomErasing

RandomErasing

Description

Randomly selects a rectangle region in an image and randomizes its pixels.

Usage

RandomErasing(p = 0.5, sl = 0, sh = 0.3, min_aspect = 0.3, max_count = 1)

Arguments

| | |
|------------|----------------|
| p | probability |
| sl | sl |
| sh | sh |
| min_aspect | minimum aspect |
| max_count | maximum count |

Value

None

RandomResizedCrop *RandomResizedCrop*

Description

Picks a random scaled crop of an image and resize it to 'size'

Usage

```
RandomResizedCrop(
    size,
    min_scale = 0.08,
    ratio = list(0.75, 1.3333333333333333),
    resamples = list(2, 0),
    val_xtra = 0.14
)
```

Arguments

| | |
|-----------|-----------------|
| size | size |
| min_scale | minimum scale |
| ratio | ratio |
| resamples | resamples |
| val_xtra | validation xtra |

Value

None

RandomResizedCropGPU *RandomResizedCropGPU*

Description

Picks a random scaled crop of an image and resize it to 'size'

Usage

```
RandomResizedCropGPU(
    size,
    min_scale = 0.08,
    ratio = list(0.75, 1.3333333333333333),
    mode = "bilinear",
    valid_scale = 1
)
```

Arguments

| | |
|-------------|------------------|
| size | size |
| min_scale | minimum scale |
| ratio | ratio |
| mode | mode |
| valid_scale | validation scale |

Value

None

| | |
|----------------|-----------------------|
| RandomSplitter | <i>RandomSplitter</i> |
|----------------|-----------------------|

Description

Create function that splits ‘items’ between train/val with ‘valid_pct’ randomly.

Usage

```
RandomSplitter(valid_pct = 0.2, seed = NULL)
```

Arguments

| | |
|-----------|------------------------------|
| valid_pct | validation percentatge split |
| seed | random seed |

Value

None

| | |
|----------|-----------------|
| RandPair | <i>RandPair</i> |
|----------|-----------------|

Description

a random image from domain B, resulting in a random pair of images from domain A and B.

Usage

```
RandPair(itemsB)
```

Arguments

| | |
|--------|------------------------------|
| itemsB | a random image from domain B |
|--------|------------------------------|

Value

None

| | |
|---------------|----------------------|
| RandTransform | <i>RandTransform</i> |
|---------------|----------------------|

Description

A transform that before_call its state at each ‘__call__’

Usage

```
RandTransform(p = 1, nm = NULL, before_call = NULL, ...)
```

Arguments

| | |
|-------------|------------------------------|
| p | probability |
| nm | nm |
| before_call | before call |
| ... | additional arguments to pass |

Value

None

| | |
|--------|---------------|
| ranger | <i>Ranger</i> |
|--------|---------------|

Description

Convenience method for ‘Lookahead’ with ‘RAdam’

Usage

```
ranger(
  p,
  lr,
  mom = 0.95,
  wd = 0.01,
  eps = 1e-06,
  sqr_mom = 0.99,
  beta = 0,
  decouple_wd = TRUE
)
```

Arguments

| | |
|-------------|-----------------------|
| p | p |
| lr | learning rate |
| mom | momentum |
| wd | weight decay |
| eps | epsilon |
| sqr_mom | sqr momentum |
| beta | beta |
| decouple_wd | decouple weight decay |

Value

None

RatioResize

RatioResize

Description

Resizes the biggest dimension of an image to 'max_sz' maintaining the aspect ratio

Usage

```
RatioResize(max_sz, resamples = list(2, 0), ...)
```

Arguments

| | |
|-----------|----------------------|
| max_sz | maximum sz |
| resamples | resamples |
| ... | additional arguments |

Value

None

| | |
|-------------|--------------------|
| ReadTSBatch | <i>ReadTSBatch</i> |
|-------------|--------------------|

Description

A transform that always take lists as items

Usage

```
ReadTSBatch(to)
```

Arguments

| | |
|----|-----------------------------------|
| to | output from TSDDataTable function |
|----|-----------------------------------|

Value

None

| | |
|--------|---------------|
| Recall | <i>Recall</i> |
|--------|---------------|

Description

Recall for single-label classification problems

Usage

```
Recall(
  axis = -1,
  labels = NULL,
  pos_label = 1,
  average = "binary",
  sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

 RecallMulti

RecallMulti

Description

Recall for multi-label classification problems

Usage

```
RecallMulti(
    thresh = 0.5,
    sigmoid = TRUE,
    labels = NULL,
    pos_label = 1,
    average = "macro",
    sample_weight = NULL
)
```

Arguments

| | |
|---------------|---------------|
| thresh | thresh |
| sigmoid | sigmoid |
| labels | labels |
| pos_label | pos_label |
| average | average |
| sample_weight | sample_weight |

Value

None

ReduceLROnPlateau

ReduceLROnPlateau

Description

ReduceLROnPlateau

Usage

```
ReduceLROnPlateau(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

Examples

```
## Not run:

URLs_MNIST_SAMPLE()
# transformations
tfms = aug_transforms(do_flip = FALSE)
path = 'mnist_sample'
bs = 20

#load into memory
data = ImageDataLoaders_from_folder(path, batch_tfms = tfms, size = 26, bs = bs)

learn = cnn_learner(data, resnet18(), metrics = accuracy, path = getwd())

learn %>% fit_one_cycle(10, 1e-2, cbs = ReduceLROnPlateau(monitor='valid_loss', patience = 1))

## End(Not run)
```

RegressionBlock

RegressionBlock

Description

‘TransformBlock‘ for float targets

Usage

```
RegressionBlock(n_out = NULL)
```

Arguments

n_out number of out features

Value

Block object

| | |
|---------------|-----------------------|
| RemoveSilence | <i>Remove Silence</i> |
|---------------|-----------------------|

Description

Split signal at points of silence greater than 2*pad_ms

Usage

```
RemoveSilence(
  remove_type = RemoveType()$Trim$value,
  threshold = 20,
  pad_ms = 20
)
```

Arguments

| | |
|-------------|------------------------------------|
| remove_type | remove type from RemoveType module |
| threshold | threshold point |
| pad_ms | pad milliseconds |

Value

None

| | |
|------------|--------------------------|
| RemoveType | <i>RemoveType module</i> |
|------------|--------------------------|

Description

RemoveType module

Usage

```
RemoveType()
```

Value

None

replace_all_caps *Replace_all_caps*

Description

Replace tokens in ALL CAPS by their lower version and add 'TK_UP' before.

Usage

`replace_all_caps(t)`

Arguments

t text

Value

string

replace_maj *Replace_maj*

Description

Replace tokens in ALL CAPS by their lower version and add 'TK_UP' before.

Usage

`replace_maj(t)`

Arguments

t text

Value

string

replace_rep

Replace_rep

Description

Replace repetitions at the character level: cccc – TK_REP 4 c

Usage

replace_rep(t)

Arguments

t text

Value

string

replace_wrep

Replace_wrep

Description

Replace word repetitions: word word word word – TK_WREP 4 word

Usage

replace_wrep(t)

Arguments

t text

Value

string

| | |
|----------|-----------------|
| Resample | <i>Resample</i> |
|----------|-----------------|

Description

Resample using faster polyphase technique and avoiding FFT computation

Usage

```
Resample(sr_new)
```

Arguments

| | |
|--------|-------|
| sr_new | input |
|--------|-------|

Value

None

| | |
|----------|-----------------|
| ResBlock | <i>ResBlock</i> |
|----------|-----------------|

Description

Resnet block from 'ni' to 'nh' with 'stride'

Usage

```
ResBlock(
  expansion,
  ni,
  nf,
  stride = 1,
  groups = 1,
  reduction = NULL,
  nh1 = NULL,
  nh2 = NULL,
  dw = FALSE,
  g2 = 1,
  sa = FALSE,
  sym = FALSE,
  norm_type = 1,
  act_cls = nn$ReLU,
  ndim = 2,
  ks = 3,
  pool = AvgPool(),
```

```

    pool_first = TRUE,
    padding = NULL,
    bias = NULL,
    bn_1st = TRUE,
    transpose = FALSE,
    init = "auto",
    xtra = NULL,
    bias_std = 0.01,
    dilation = 1,
    padding_mode = "zeros"
)

```

Arguments

| | |
|--------------|----------------------------|
| expansion | decoder |
| ni | number of linear inputs |
| nf | number of features |
| stride | stride number |
| groups | groups number |
| reduction | reduction |
| nh1 | out channels 1 |
| nh2 | out channels 2 |
| dw | dw paramer |
| g2 | g2 block |
| sa | sa parameter |
| sym | symmetric |
| norm_type | normalization type |
| act_cls | activation |
| ndim | dimension number |
| ks | kernel size |
| pool | pooling type, Average, Max |
| pool_first | pooling first |
| padding | padding |
| bias | bias |
| bn_1st | batch normalization 1st |
| transpose | transpose |
| init | initializer |
| xtra | xtra |
| bias_std | bias standard deviation |
| dilation | dilation number |
| padding_mode | padding mode |

Value

Block object

 reshape *Reshape*

Description

resize x to (w,h)

Usage

```
reshape(x, h, w, resample = 0)
```

Arguments

| | |
|----------|----------------|
| x | tensor |
| h | height |
| w | width |
| resample | resample value |

Value

None

 Resize *Resize*

DescriptionA transform that before_call its state at each '`__call__`'**Usage**

```
Resize(size, method = "crop", pad_mode = "reflection", resamples = list(2, 0))
```

Arguments

| | |
|-----------|---|
| size | size of image |
| method | method |
| pad_mode | reflection, zeros, border as string parameter |
| resamples | list of integers |

Value

None

 ResizeBatch

ResizeBatch

Description

Reshape x to size, keeping batch dim the same size

Usage

```
ResizeBatch(...)
```

Arguments

... parameters to pass

Value

None

ResizeSignal

Resize Signal

Description

Crops signal to be length specified in ms by duration, padding if needed

Usage

```
ResizeSignal(duration, pad_mode = AudioPadType()$Zeros)
```

Arguments

duration int, duration
 pad_mode padding mode

Value

None

| | |
|------------|-------------------|
| resize_max | <i>Resize_max</i> |
|------------|-------------------|

Description

'resize' 'x' to 'max_px', or 'max_h', or 'max_w'

Usage

```
resize_max(img, resample = 0, max_px = NULL, max_h = NULL, max_w = NULL)
```

Arguments

| | |
|----------|----------------|
| img | image |
| resample | resample value |
| max_px | max px |
| max_h | max height |
| max_w | max width |

Value

None

| | |
|--------|---------------|
| ResNet | <i>ResNet</i> |
|--------|---------------|

Description

Base class for all neural network modules.

Usage

```
ResNet(
  block,
  layers,
  num_classes = 1000,
  zero_init_residual = FALSE,
  groups = 1,
  width_per_group = 64,
  replace_stride_with_dilation = NULL,
  norm_layer = NULL
)
```

Arguments

| | |
|------------------------------|---|
| block | the blocks that need to be passed to ResNet |
| layers | the layers to pass to ResNet |
| num_classes | the number of classes |
| zero_init_residual | logical, initializer |
| groups | the groups |
| width_per_group | the width per group |
| replace_stride_with_dilation | logical, replace stride with dilation |
| norm_layer | norm_layer |

 resnet101

Resnet101

Description

ResNet-101 model from

Usage

```
resnet101(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

"Deep Residual Learning for Image Recognition" <<https://arxiv.org/pdf/1512.03385.pdf>>

Value

model

resnet152

Resnet152

Description

Resnet152

Usage

```
resnet152(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

"Deep Residual Learning for Image Recognition" <<https://arxiv.org/pdf/1512.03385.pdf>>

Value

model

resnet18

Resnet18

Description

Resnet18

Usage

```
resnet18(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

"Deep Residual Learning for Image Recognition" <<https://arxiv.org/pdf/1512.03385.pdf>>

Value

model

| | |
|----------|-----------------|
| resnet34 | <i>Resnet34</i> |
|----------|-----------------|

Description

ResNet-34 model from

Usage

```
resnet34(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

"Deep Residual Learning for Image Recognition" <<https://arxiv.org/pdf/1512.03385.pdf>>

Value

model

| | |
|----------|-----------------|
| resnet50 | <i>Resnet50</i> |
|----------|-----------------|

Description

Resnet50

Usage

```
resnet50(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

"Deep Residual Learning for Image Recognition" <<https://arxiv.org/pdf/1512.03385.pdf>>

Value

model

| | |
|-------------|--------------------|
| ResnetBlock | <i>ResnetBlock</i> |
|-------------|--------------------|

Description

nn()\$Module for the ResNet Block

Usage

```
ResnetBlock(
  dim,
  pad_mode = "reflection",
  norm_layer = NULL,
  dropout = 0,
  bias = TRUE
)
```

Arguments

| | |
|------------|---------------------|
| dim | dimension |
| pad_mode | padding mode |
| norm_layer | normalization layer |
| dropout | dropout rate |
| bias | bias or not |

Value

None

| | |
|------------------|-------------------------|
| resnet_generator | <i>Resnet_generator</i> |
|------------------|-------------------------|

Description

Resnet_generator

Usage

```
resnet_generator(
  ch_in,
  ch_out,
  n_ftrs = 64,
  norm_layer = NULL,
  dropout = 0,
  n_blocks = 9,
  pad_mode = "reflection"
)
```

Arguments

| | |
|------------|---------------------|
| ch_in | input |
| ch_out | output |
| n_ftrs | filter |
| norm_layer | normalziation layer |
| dropout | dropout rate |
| n_blocks | number of blocks |
| pad_mode | paddoing mode |

Value

None

| | |
|--------------|---------------------|
| res_block_1d | <i>Res_block_1d</i> |
|--------------|---------------------|

Description

Resnet block as described in the paper.

Usage

```
res_block_1d(nf, ks = c(5, 3))
```

Arguments

| | |
|----|--------------------|
| nf | number of features |
| ks | kernel size |

Value

block

RetinaNet

RetinaNet

Description

Implements RetinaNet from <https://arxiv.org/abs/1708.02002>

Usage

```
RetinaNet(...)
```

Arguments

```
... arguments to pass
```

Value

```
model
```

Examples

```
## Not run:  
  
encoder = create_body(resnet34(), pretrained = TRUE)  
arch = RetinaNet(encoder, get_c(dls), final_bias=-4)  
  
## End(Not run)
```

RetinaNetFocalLoss

RetinaNetFocalLoss

Description

Base class for all neural network modules.

Usage

```
RetinaNetFocalLoss(...)
```

Arguments

```
... parameters to pass
```

Details

Your models should also subclass this class. Modules can also contain other Modules, allowing to nest them in a tree structure. You can assign the submodules as regular attributes::

```
import torch.nn as nn
import torch.nn.functional as F
class Model(nn.Module):
    def __init__(self):
        super(Model, self).__init__()
        self.conv1 = nn.Conv2d(1, 20, 5)
        self.conv2 = nn.Conv2d(20, 20, 5)
    def forward(self, x):
        x = F.relu(self.conv1(x))
        return F.relu(self.conv2(x))
```

Submodules assigned in this way will be registered, and will have their parameters converted too when you call :meth:`to`, etc.

Value

None

| | |
|------------|-------------------------|
| retinanet_ | <i>Retinanet module</i> |
|------------|-------------------------|

Description

Retinanet module

Usage

retinanet_()

Value

None

| | |
|--------------|---------------------|
| reverse_text | <i>Reverse_text</i> |
|--------------|---------------------|

Description

Reverse_text

Usage

reverse_text(x)

Arguments

| | |
|---|------|
| x | text |
|---|------|

Value

string

`rgb2hsv`*Rgb2hsv*

Description

Converts a RGB image to an HSV image.

Usage

```
rgb2hsv(img)
```

Arguments

`img` image object

Details

Note: Will not work on logit space images.

Value

None

`rmse`*RMSE*

Description

Root mean squared error

Usage

```
rmse(preds, targs)
```

Arguments

`preds` predictions
`targs` targets

Value

None

Examples

```
## Not run:

model = dls %>% tabular_learner(layers=c(200,100,100,200),
metrics = list(mse(),rmse()) )

## End(Not run)
```

RMSProp

RMSProp

Description

RMSProp

Usage

RMSProp(...)

Arguments

... parameters to pass

Value

None

rms_prop_step

Rms_prop_step

Description

Step for SGD with momentum with 'lr'

Usage

rms_prop_step(p, lr, sqr_avg, eps, grad_avg = NULL, ...)

Arguments

| | |
|----------|------------------------------|
| p | p |
| lr | learning rate |
| sqr_avg | sqr average |
| eps | epsilon |
| grad_avg | grad average |
| ... | additional arguments to pass |

Value

None

rm_useless_spaces *Rm_useless_spaces*

Description

Remove multiple spaces

Usage

`rm_useless_spaces(t)`

Arguments

t text

Value

string

Examples

```
## Not run:  
  
rm_useless_spaces('hello,  Sir!')  
  
## End(Not run)
```

RNNDropout

RNNDropout

Description

Dropout with probability ‘p’ that is consistent on the seq_len dimension.

Usage

```
RNNDropout(p = 0.5)
```

Arguments

p p

Value

None

RNNRegularizer

RNNRegularizer

Description

‘Callback’ that adds AR and TAR regularization in RNN training

Usage

```
RNNRegularizer(alpha = 0, beta = 0)
```

Arguments

alpha alpha
beta beta

Value

None

| | |
|--------|---------------|
| RocAuc | <i>RocAuc</i> |
|--------|---------------|

Description

Area Under the Receiver Operating Characteristic Curve for single-label multiclass classification problems

Usage

```
RocAuc(
  axis = -1,
  average = "macro",
  sample_weight = NULL,
  max_fpr = NULL,
  multi_class = "ovr"
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| average | average |
| sample_weight | sample_weight |
| max_fpr | max_fpr |
| multi_class | multi_class |

Value

None

| | |
|--------------|---------------------|
| RocAucBinary | <i>RocAucBinary</i> |
|--------------|---------------------|

Description

Area Under the Receiver Operating Characteristic Curve for single-label binary classification problems

Usage

```
RocAucBinary(
  axis = -1,
  average = "macro",
  sample_weight = NULL,
  max_fpr = NULL,
  multi_class = "raise"
)
```

Arguments

| | |
|---------------|---------------|
| axis | axis |
| average | average |
| sample_weight | sample_weight |
| max_fpr | max_fpr |
| multi_class | multi_class |

Value

None

Examples

```
## Not run:

model = dls %>% tabular_learner(layers=c(200,100,100,200),
  config = tabular_config(embed_p = 0.3, use_bn = FALSE),
  metrics = list(accuracy, RocAucBinary(),
    Precision(), Recall(),
    F1Score()))

## End(Not run)
```

RocAucMulti

RocAucMulti

Description

Area Under the Receiver Operating Characteristic Curve for multi-label binary classification problems

Usage

```
RocAucMulti(
  sigmoid = TRUE,
  average = "macro",
  sample_weight = NULL,
  max_fpr = NULL
)
```

Arguments

| | |
|---------------|---------------|
| sigmoid | sigmoid |
| average | average |
| sample_weight | sample_weight |
| max_fpr | max_fpr |

Value

None

| | |
|--------|---------------|
| Rotate | <i>Rotate</i> |
|--------|---------------|

Description

Apply a random rotation of at most 'max_deg' with probability 'p' to a batch of images

Usage

```
Rotate(
    max_deg = 10,
    p = 0.5,
    draw = NULL,
    size = NULL,
    mode = "bilinear",
    pad_mode = "reflection",
    align_corners = TRUE,
    batch = FALSE
)
```

Arguments

| | |
|---------------|---|
| max_deg | maximum degrees |
| p | probability |
| draw | draw |
| size | size of image |
| mode | mode |
| pad_mode | reflection, zeros, border as string parameter |
| align_corners | align corners or not |
| batch | batch or not |

Value

None

| | |
|------------|-------------------|
| rotate_mat | <i>Rotate_mat</i> |
|------------|-------------------|

Description

Return a random rotation matrix with 'max_deg' and 'p'

Usage

```
rotate_mat(x, max_deg = 10, p = 0.5, draw = NULL, batch = FALSE)
```

Arguments

| | |
|---------|-------------|
| x | tensor |
| max_deg | max_deg |
| p | probability |
| draw | draw |
| batch | batch |

Value

None

| | |
|-------|--------------|
| round | <i>Round</i> |
|-------|--------------|

Description

Round

Usage

```
## S3 method for class 'torch.Tensor'
round(x, digits = 0)
```

Arguments

| | |
|--------|---------|
| x | tensor |
| digits | decimal |

Value

tensor

round.fastai.torch_core.TensorMask
Round

Description

Round

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
round(x, digits = 0)
```

Arguments

| | |
|--------|---------|
| x | tensor |
| digits | decimal |

Value

tensor

Saturation *Saturation*

Description

Apply change in saturation of ‘max_lighting’ to batch of images with probability ‘p’.

Usage

```
Saturation(max_lighting = 0.2, p = 0.75, draw = NULL, batch = FALSE)
```

Arguments

| | |
|--------------|------------------|
| max_lighting | maximum lighting |
| p | probability |
| draw | draw |
| batch | batch |

Value

None

| | |
|-------------------|--------------------------|
| SaveModelCallback | <i>SaveModelCallback</i> |
|-------------------|--------------------------|

Description

SaveModelCallback

Usage

SaveModelCallback(...)

Arguments

... parameters to pass

Value

None

| | |
|----------|-----------------|
| SchedCos | <i>SchedCos</i> |
|----------|-----------------|

Description

Cosine schedule function from 'start' to 'end'

Usage

SchedCos(start, end)

Arguments

| | |
|-------|-------|
| start | start |
| end | end |

Value

None

SchedExp

SchedExp

Description

Exponential schedule function from 'start' to 'end'

Usage

SchedExp(start, end)

Arguments

| | |
|-------|-------|
| start | start |
| end | end |

Value

None

SchedLin

SchedLin

Description

Linear schedule function from 'start' to 'end'

Usage

SchedLin(start, end)

Arguments

| | |
|-------|-------|
| start | start |
| end | end |

Value

None

| | |
|---------|----------------|
| SchedNo | <i>SchedNo</i> |
|---------|----------------|

Description

Constant schedule function with 'start' value

Usage

SchedNo(start, end)

Arguments

| | |
|-------|-------|
| start | start |
| end | end |

Value

None

| | |
|-----------|------------------|
| SchedPoly | <i>SchedPoly</i> |
|-----------|------------------|

Description

Polynomial schedule (of 'power') function from 'start' to 'end'

Usage

SchedPoly(start, end, power)

Arguments

| | |
|-------|-------|
| start | start |
| end | end |
| power | power |

Value

None

| | |
|---------|----------------|
| SEBlock | <i>SEBlock</i> |
|---------|----------------|

Description

SEBlock

Usage

```
SEBlock(expansion, ni, nf, groups = 1, reduction = 16, stride = 1)
```

Arguments

| | |
|-----------|---------------------|
| expansion | decoder |
| ni | number of inputs |
| nf | number of features |
| groups | number of groups |
| reduction | number of reduction |
| stride | number of strides |

Value

Block object

| | |
|---|--|
| SegmentationDataLoaders_from_label_func | <i>SegmentationDataLoaders_from_label_func</i> |
|---|--|

Description

Create from list of 'fnames' in 'path's with 'label_func'.

Usage

```
SegmentationDataLoaders_from_label_func(
  path,
  fnames,
  label_func,
  valid_pct = 0.2,
  seed = NULL,
  codes = NULL,
  item_tfms = NULL,
  batch_tfms = NULL,
  bs = 64,
```

```

    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL
)

```

Arguments

| | |
|---------------|-----------------------|
| path | path |
| fnames | file names |
| label_func | label function |
| valid_pct | validation percentage |
| seed | seed |
| codes | codes |
| item_tfms | item transformations |
| batch_tfms | batch transformations |
| bs | batch size |
| val_bs | validation batch size |
| shuffle_train | shuffle train |
| device | device name |

Value

None

| | |
|---------------|----------------------|
| SelfAttention | <i>SelfAttention</i> |
|---------------|----------------------|

Description

Self attention layer for ‘n_channels’.

Usage

```
SelfAttention(n_channels)
```

Arguments

| | |
|------------|--------------------|
| n_channels | number of channels |
|------------|--------------------|

Value

None

| | |
|----------|-----------------|
| SEModule | <i>SEModule</i> |
|----------|-----------------|

Description

SEModule

Usage

SEModule(ch, reduction, act_cls = nn()\$ReLU)

Arguments

| | |
|-----------|------------|
| ch | ch |
| reduction | reduction |
| act_cls | activation |

Value

None

| | |
|-----------------|------------------------|
| SentenceEncoder | <i>SentenceEncoder</i> |
|-----------------|------------------------|

Description

Create an encoder over ‘module’ that can process a full sentence.

Usage

SentenceEncoder(bptt, module, pad_idx = 1, max_len = NULL)

Arguments

| | |
|---------|---------|
| bptt | bptt |
| module | module |
| pad_idx | pad_idx |
| max_len | max_len |

Value

None

SentencePieceTokenizer

SentencePieceTokenizer

Description

SentencePiece tokenizer for 'lang'

Usage

```
SentencePieceTokenizer(  
  lang = "en",  
  special_toks = NULL,  
  sp_model = NULL,  
  vocab_sz = NULL,  
  max_vocab_sz = 30000,  
  model_type = "unigram",  
  char_coverage = NULL,  
  cache_dir = "tmp"  
)
```

Arguments

| | |
|---------------|---------------|
| lang | lang |
| special_toks | special_toks |
| sp_model | sp_model |
| vocab_sz | vocab_sz |
| max_vocab_sz | max_vocab_sz |
| model_type | model_type |
| char_coverage | char_coverage |
| cache_dir | cache_dir |

Value

None

| | |
|----------------|-----------------------|
| SeparableBlock | <i>SeparableBlock</i> |
|----------------|-----------------------|

Description

SeparableBlock

Usage

```
SeparableBlock(expansion, ni, nf, reduction = 16, stride = 1, base_width = 4)
```

Arguments

| | |
|------------|---------------------|
| expansion | decoder |
| ni | number of inputs |
| nf | number of features |
| reduction | number of reduction |
| stride | number of stride |
| base_width | base width |

Value

Block object

| | |
|------------|-------------------|
| sequential | <i>Sequential</i> |
|------------|-------------------|

Description

Sequential

Usage

```
sequential(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

None

SequentialEx

SequentialEx

Description

SequentialEx

Usage

SequentialEx(...)

Arguments

... parameters to pass

Value

None

SequentialRNN

Sequential RNN

Description

Sequential RNN

Usage

SequentialRNN(...)

Arguments

... parameters to pass

Value

layer

| | |
|----------------|-----------------------|
| SEResNeXtBlock | <i>SEResNeXtBlock</i> |
|----------------|-----------------------|

Description

SEResNeXtBlock

Usage

```
SEResNeXtBlock(
    expansion,
    ni,
    nf,
    groups = 32,
    reduction = 16,
    stride = 1,
    base_width = 4
)
```

Arguments

| | |
|------------|-------------------------|
| expansion | decoder |
| ni | number of linear inputs |
| nf | number of features |
| groups | groups number |
| reduction | reduction number |
| stride | stride number |
| base_width | int, base width |

Value

Block object

| | |
|----------------|-----------------------|
| setup_aug_tfms | <i>Setup_aug_tfms</i> |
|----------------|-----------------------|

Description

Go through 'tfms' and combines together affine/coord or lighting transforms

Usage

```
setup_aug_tfms(tfms)
```

Arguments

| | |
|------|-----------------|
| tfms | transformations |
|------|-----------------|

Value

None

| | |
|------------------|-------------------------|
| set_freeze_model | <i>Set freeze model</i> |
|------------------|-------------------------|

Description

Set freeze model

Usage

```
set_freeze_model(m, rg)
```

Arguments

| | |
|----|------------|
| m | parameters |
| rg | rg |

Value

None

| | |
|-------------|--------------------|
| set_item_pg | <i>Set_item_pg</i> |
|-------------|--------------------|

Description

Set_item_pg

Usage

```
set_item_pg(pg, k, v)
```

Arguments

| | |
|----|----|
| pg | pg |
| k | k |
| v | v |

Value

None

SGD

SGD

Description

SGD

Usage

SGD(...)

Arguments

... parameters to pass

Value

None

sgd_step

Sgd_step

Description

Sgd_step

Usage

sgd_step(p, lr, ...)

Arguments

p p
lr learning rate
... additional arguments to pass

Value

None

Examples

```
## Not run:

tst_param = function(val, grad = NULL) {
  "Create a tensor with `val` and a gradient of `grad` for testing"
  res = tensor(val) %>% float()

  if(is.null(grad)) {
    grad = tensor(val / 10)
  } else {
    grad = tensor(grad)
  }

  res
}
p = tst_param(1., 0.1)
sgd_step(p, 1.)

## End(Not run)
```

SGRoll

SGRoll

Description

Shifts spectrogram along x-axis wrapping around to other side

Usage

```
SGRoll(max_shift_pct = 0.5, direction = 0)
```

Arguments

| | |
|---------------|--------------------------|
| max_shift_pct | maximum shift percentage |
| direction | direction |

Value

None

| | |
|------|--------------------|
| shap | <i>Shap module</i> |
|------|--------------------|

Description

Shap module

Usage

shap()

Value

None

| | |
|-------|--------------|
| shape | <i>Shape</i> |
|-------|--------------|

Description

Shape

Usage

shape(img)

Arguments

| | |
|-----|-------|
| img | image |
|-----|-------|

Value

None

ShapInterpretation *ShapInterpretation*

Description

Base interpreter to use the 'SHAP' interpretation library

Usage

```
ShapInterpretation(
    learn,
    test_data = NULL,
    link = "identity",
    l1_reg = "auto",
    n_samples = 128
)
```

Arguments

| | |
|-----------|--|
| learn | learner/model |
| test_data | should be either a Pandas dataframe or a TabularDataLoader. If not, 100 random rows of the training data will be used instead. |
| link | link can either be "identity" or "logit". A generalized linear model link to connect the feature importance values to the model output. Since the feature importance values, phi, sum up to the model output, it often makes sense to connect them to the output with a link function where $\text{link}(\text{outout}) = \text{sum}(\text{phi})$. If the model output is a probability then the LogitLink link function makes the feature importance values have log-odds units. |
| l1_reg | can be an integer value representing the number of features, "auto", "aic", "bic", or a float value. The l1 regularization to use for feature selection (the estimation procedure is based on a debiased lasso). The auto option currently uses "aic" when less than 20 space is enumerated, otherwise it uses no regularization. |
| n_samples | can either be "auto" or an integer value. This is the number of times to re-evaluate the model when explaining each predictions. More samples leads to lower variance estimations of the SHAP values |

Value

None

| | |
|----------|-----------------|
| Shortcut | <i>Shortcut</i> |
|----------|-----------------|

Description

Merge a shortcut with the result of the module by adding them. Adds Conv, BN and ReLU

Usage

```
Shortcut(ni, nf, act_fn = nn$ReLU(inplace = TRUE))
```

Arguments

| | |
|--------|--------------------------|
| ni | number of input channels |
| nf | number of features |
| act_fn | activation |

Value

None

| | |
|--------------------|---------------------------|
| ShortEpochCallback | <i>ShortEpochCallback</i> |
|--------------------|---------------------------|

Description

Fit just 'pct' of an epoch, then stop

Usage

```
ShortEpochCallback(pct = 0.01, short_valid = TRUE)
```

Arguments

| | |
|-------------|--------------------|
| pct | percentage |
| short_valid | short_valid or not |

Value

None

| | |
|------|-------------|
| show | <i>Show</i> |
|------|-------------|

Description

Adds functionality to view dicom images where each file may have more than 1 frame

Usage

```
show(img, frames = 1, scale = TRUE, ...)
```

Arguments

| | |
|--------|----------------------|
| img | image object |
| frames | number of frames |
| scale | scale |
| ... | additional arguments |

Value

None

| | |
|--------------------------|---------------------------------|
| ShowCycleGANImgsCallback | <i>ShowCycleGANImgsCallback</i> |
|--------------------------|---------------------------------|

Description

Update the progress bar with input and prediction images

Usage

```
ShowCycleGANImgsCallback(imgA = FALSE, imgB = TRUE, show_img_interval = 10)
```

Arguments

| | |
|-------------------|---------------------|
| imgA | img from A domain |
| imgB | img from B domain |
| show_img_interval | show image interval |

Value

None

| | |
|-------------------|--------------------------|
| ShowGraphCallback | <i>ShowGraphCallback</i> |
|-------------------|--------------------------|

Description

ShowGraphCallback

Usage

```
ShowGraphCallback(...)
```

Arguments

... parameters to pass

Value

None

| | |
|------------|-------------------|
| show_array | <i>Show_array</i> |
|------------|-------------------|

Description

Show an array on 'ax'.

Usage

```
show_array(
    array,
    ax = NULL,
    figsize = NULL,
    title = NULL,
    ctx = NULL,
    tx = NULL
)
```

Arguments

| | |
|---------|-------------|
| array | R array |
| ax | axis |
| figsize | figure size |
| title | title, text |
| ctx | ctx |
| tx | tx |

Value

None

Examples

```
## Not run:

arr = as.array(1:10)
show_array(arr,title = 'My R array') %>% plot(dpi = 200)

## End(Not run)
```

show_batch

Show_batch

Description

Show_batch

Usage

```
show_batch(
  dls,
  b = NULL,
  max_n = 9,
  ctxs = NULL,
  figsize = c(6, 6),
  show = TRUE,
  unique = FALSE,
  dpi = 120,
  ...
)
```

Arguments

| | |
|---------|-----------------------|
| dls | dataloader object |
| b | defaults to one_batch |
| max_n | maximum images |
| ctxs | ctxs parameter |
| figsize | figure size |
| show | show or not |

| | |
|--------|------------------------------|
| unique | unique images |
| dpi | dots per inch |
| ... | additional arguments to pass |

Value

None

Examples

```
## Not run:  
  
dls %>% show_batch()  
  
## End(Not run)
```

`show_image`*Show_image*

Description

Show a PIL or PyTorch image on 'ax'.

Usage

```
show_image(  
  im,  
  ax = NULL,  
  figsize = NULL,  
  title = NULL,  
  ctx = NULL,  
  cmap = NULL,  
  norm = NULL,  
  aspect = NULL,  
  interpolation = NULL,  
  alpha = NULL,  
  vmin = NULL,  
  vmax = NULL,  
  origin = NULL,  
  extent = NULL  
)
```

Arguments

| | |
|---------------|---------------|
| im | im |
| ax | axis |
| figsize | figure size |
| title | title |
| ctx | ctx |
| cmap | color maps |
| norm | normalization |
| aspect | aspect |
| interpolation | interpolation |
| alpha | alpha value |
| vmin | value min |
| vmax | value max |
| origin | origin |
| extent | extent |

 show_images

Show_images

Description

Show all images 'ims' as subplots with 'rows' using 'titles'

Usage

```
show_images(
    ims,
    nrows = 1,
    ncols = NULL,
    titles = NULL,
    figsize = NULL,
    imsize = 3,
    add_vert = 0
)
```

Arguments

| | |
|----------|-------------------|
| ims | images |
| nrows | number of rows |
| ncols | number of columns |
| titles | titles |
| figsize | figure size |
| imsize | image size |
| add_vert | add vertical |

Value

None

`show_preds`

Show_preds

Description

Show_preds

Usage

```

show_preds(
    predictions,
    idx,
    class_map = NULL,
    denormalize_fn = denormalize_imagenet(),
    display_label = TRUE,
    display_bbox = TRUE,
    display_mask = TRUE,
    ncols = 1,
    figsize = NULL,
    show = FALSE,
    dpi = 100
)

```

Arguments

| | |
|-----------------------------|---------------------------------|
| <code>predictions</code> | provide list of raw predictions |
| <code>idx</code> | image indices |
| <code>class_map</code> | <code>class_map</code> |
| <code>denormalize_fn</code> | <code>denormalize_fn</code> |
| <code>display_label</code> | <code>display_label</code> |
| <code>display_bbox</code> | <code>display_bbox</code> |
| <code>display_mask</code> | <code>display_mask</code> |
| <code>ncols</code> | <code>ncols</code> |
| <code>figsize</code> | <code>figsize</code> |
| <code>show</code> | <code>show</code> |
| <code>dpi</code> | dots per inch |

Value

None

| | |
|--------------|---------------------|
| show_results | <i>Show_results</i> |
|--------------|---------------------|

Description

Show some predictions on ‘ds_idx’-th dataset or ‘dl’

Usage

```
show_results(
    object,
    ds_idx = 1,
    dl = NULL,
    max_n = 9,
    shuffle = TRUE,
    dpi = 90,
    ...
)
```

Arguments

| | |
|---------|--------------------------|
| object | model |
| ds_idx | ds by index |
| dl | dataloader |
| max_n | maximum number of images |
| shuffle | shuffle or not |
| dpi | dots per inch |
| ... | additional arguments |

Value

None

| | |
|--------------|---------------------|
| show_samples | <i>Show_samples</i> |
|--------------|---------------------|

Description

Show_samples

Usage

```

show_samples(
    dls,
    idx,
    class_map = NULL,
    denormalize_fn = denormalize_imagenet(),
    display_label = TRUE,
    display_bbox = TRUE,
    display_mask = TRUE,
    ncols = 1,
    figsize = NULL,
    show = FALSE,
    dpi = 100
)

```

Arguments

| | |
|----------------|----------------|
| dls | dataloader |
| idx | image indices |
| class_map | class_map |
| denormalize_fn | denormalize_fn |
| display_label | display_label |
| display_bbox | display_bbox |
| display_mask | display_mask |
| ncols | ncols |
| figsize | figsize |
| show | show |
| dpi | dots per inch |

Value

None

sigmoid

Sigmoid

Description

Same as ‘torch\$sigmoid’, plus clamping to ‘(eps,1-eps)’

Usage

```
sigmoid(input, eps = 1e-07)
```

Arguments

| | |
|-------|---------|
| input | inputs |
| eps | epsilon |

Value

None

SigmoidRange

*SigmoidRange***Description**

Sigmoid module with range '(low, high)'

Usage

SigmoidRange(low, high)

Arguments

| | |
|------|------------|
| low | low value |
| high | high value |

Value

None

sigmoid_

*Sigmoid_***Description**

Same as 'torch\$sigmoid_', plus clamping to '(eps,1-eps)

Usage

sigmoid_(input, eps = 1e-07)

Arguments

| | |
|-------|-------|
| input | input |
| eps | eps |

Value

None

| | |
|---------------|----------------------|
| sigmoid_range | <i>Sigmoid_range</i> |
|---------------|----------------------|

Description

Sigmoid function with range '(low, high)'

Usage

```
sigmoid_range(x, low, high)
```

Arguments

| | |
|------|------------|
| x | tensor |
| low | low value |
| high | high value |

Value

None

| | |
|--------------|----------------------|
| SignalCutout | <i>Signal Cutout</i> |
|--------------|----------------------|

Description

Randomly zeros some portion of the signal

Usage

```
SignalCutout(p = 0.5, max_cut_pct = 0.15)
```

Arguments

| | |
|-------------|--------------------|
| p | probability |
| max_cut_pct | max cut percentage |

Value

None

 SignalLoss

*Signal Loss***Description**

Randomly loses some portion of the signal

Usage

```
SignalLoss(p = 0.5, max_loss_pct = 0.15)
```

Arguments

| | |
|--------------|---------------------|
| p | probability |
| max_loss_pct | max loss percentage |

Value

None

SignalShifter

*Signal Shifter***Description**

Randomly shifts the audio signal by 'max_pct'

Usage

```
SignalShifter(
  p = 0.5,
  max_pct = 0.2,
  max_time = NULL,
  direction = 0,
  roll = FALSE
)
```

Arguments

| | |
|-----------|----------------|
| p | probability |
| max_pct | max percentage |
| max_time | maximum time |
| direction | direction |
| roll | roll or not |

Details

direction must be -1(left) 0(bidirectional) or 1(right).

Value

None

SimpleCNN

SimpleCNN

Description

Create a simple CNN with 'filters'.

Usage

```
SimpleCNN(filters, kernel_szs = NULL, strides = NULL, bn = TRUE)
```

Arguments

| | |
|------------|---------------------|
| filters | filters number |
| kernel_szs | kernel size |
| strides | strides |
| bn | batch normalization |

Value

None

SimpleSelfAttention

SimpleSelfAttention

Description

Same as 'nn()\$Module', but no need for subclasses to call 'super()\$__init__\$'

Usage

```
SimpleSelfAttention(n_in, ks = 1, sym = FALSE)
```

Arguments

| | |
|------|-------------|
| n_in | inputs |
| ks | kernel size |
| sym | sym |

Value

None

 sin.fastai.torch_core.TensorMask
Sin

Description

Sin

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
sin(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

 sinh.fastai.torch_core.TensorMask
Sinh

Description

Sinh

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
sinh(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

| | |
|------|------------|
| sin_ | <i>Sin</i> |
|------|------------|

Description

Sin

Usage

```
## S3 method for class 'torch.Tensor'
sin(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

tensor

| | |
|---------------|----------------------|
| skm_to_fastai | <i>Skm to fastai</i> |
|---------------|----------------------|

Description

Convert 'func' from sklearn\$metrics to a fastai metric

Usage

```
skm_to_fastai(
  func,
  is_class = TRUE,
  thresh = NULL,
  axis = -1,
  activation = NULL,
  ...
)
```

Arguments

| | |
|------------|------------------------------|
| func | function |
| is_class | is classification or not |
| thresh | threshold point |
| axis | axis |
| activation | activation |
| ... | additional arguments to pass |

Value

None

`slice`*Slice*

Description

Slice

Usage`slice(...)`**Arguments**`...` additional arguments**Details**`slice(start, stop[, step])` Create a slice object. This is used for extended slicing (e.g. `a[0:10:2]`).**Value**

sliced object

`sort`*Sort*

Description

Sort

Usage

```
## S3 method for class 'torch.Tensor'
sort(x, decreasing = FALSE, ...)
```

Arguments

| | |
|-------------------------|-------------------------------|
| <code>x</code> | tensor |
| <code>decreasing</code> | the order |
| <code>...</code> | additional parameters to pass |

```
sort.fastai.torch_core.TensorMask
    Sort
```

Description

Sort

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
sort(x, decreasing = FALSE, ...)
```

Arguments

| | |
|------------|-------------------------------|
| x | tensor |
| decreasing | the order |
| ... | additional parameters to pass |

Value

tensor

```
SortedDL          SortedDL
```

Description

A ‘DataLoader’ that goes through the item in the order given by ‘sort_func’

Usage

```
SortedDL(
  dataset,
  sort_func = NULL,
  res = NULL,
  bs = 64,
  shuffle = FALSE,
  num_workers = NULL,
  verbose = FALSE,
  do_setup = TRUE,
  pin_memory = FALSE,
  timeout = 0,
  batch_size = NULL,
  drop_last = FALSE,
```

```

    indexed = NULL,
    n = NULL,
    device = NULL
)

```

Arguments

| | |
|-------------|-------------|
| dataset | dataset |
| sort_func | sort_func |
| res | res |
| bs | bs |
| shuffle | shuffle |
| num_workers | num_workers |
| verbose | verbose |
| do_setup | do_setup |
| pin_memory | pin_memory |
| timeout | timeout |
| batch_size | batch_size |
| drop_last | drop_last |
| indexed | indexed |
| n | n |
| device | device |

Value

None

| | |
|----------------|-----------------------|
| SpacyTokenizer | <i>SpacyTokenizer</i> |
|----------------|-----------------------|

Description

Spacy tokenizer for 'lang'

Usage

```
SpacyTokenizer(lang = "en", special_toks = NULL, buf_sz = 5000)
```

Arguments

| | |
|--------------|--------------------|
| lang | language |
| special_toks | special tokenizers |
| buf_sz | buffer size |

Value

none

| | |
|------------------|-------------------------|
| SpearmanCorrCoef | <i>SpearmanCorrCoef</i> |
|------------------|-------------------------|

Description

Spearman correlation coefficient for regression problem

Usage

```
SpearmanCorrCoef(
    dim_argmax = NULL,
    axis = 0,
    nan_policy = "propagate",
    activation = "no",
    thresh = NULL,
    to_np = FALSE,
    invert_arg = FALSE,
    flatten = TRUE
)
```

Arguments

| | |
|------------|------------|
| dim_argmax | dim_argmax |
| axis | axis |
| nan_policy | nan_policy |
| activation | activation |
| thresh | thresh |
| to_np | to_np |
| invert_arg | invert_arg |
| flatten | flatten |

Value

None

SpectrogramTransformer

Spectrogram Transformer

Description

Creates a factory for creating AudioToSpec

Usage

```
SpectrogramTransformer(mel = TRUE, to_db = TRUE)
```

Arguments

| | |
|-------|------------------------|
| mel | mel-spectrogram or not |
| to_db | to decibels |

Details

transforms with different parameters

Value

None

spec_add_spaces

Spec_add_spaces

Description

Add spaces around / and #

Usage

```
spec_add_spaces(t)
```

Arguments

| | |
|---|------|
| t | text |
|---|------|

Value

string

sqrD

SqrT

Description

SqrT

Usage

```
## S3 method for class 'torch.Tensor'  
sqrT(x)
```

Arguments

x tensor

Value

tensor

sqrT.fastai.torch_core.TensorMask

SqrT

Description

SqrT

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
sqrT(x)
```

Arguments

x tensor

Value

tensor

 SqueezeNet

SqueezeNet

Description

Base class for all neural network modules.

Usage

```
SqueezeNet(version = "1_0", num_classes = 1000)
```

Arguments

| | |
|-------------|-----------------------|
| version | version of SqueezeNet |
| num_classes | the number of classes |

Details

Your models should also subclass this class. Modules can also contain other Modules, allowing to nest them in a tree structure. You can assign the submodules as regular attributes::

```
import torch.nn as nn
import torch.nn.functional as F
class Model(nn.Module):
    def __init__(self):
        super(Model, self).__init__()
        self.conv1 = nn.Conv2d(1, 20, 5)
        self.conv2 = nn.Conv2d(20, 20, 5)
    def forward(self, x):
        x = F.relu(self.conv1(x))
        return F.relu(self.conv2(x))
```

Submodules assigned in this way will be registered, and will have their parameters converted too when you call :meth:`to`, etc.

Value

model

squeezeNet1_0

SqueezeNet1_0

Description

SqueezeNet model architecture from the "SqueezeNet: AlexNet-level

Usage

```
squeezeNet1_0(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

accuracy with 50x fewer parameters and <0.5MB model size" <<https://arxiv.org/abs/1602.07360>>' paper.

Value

model

squeezenet1_1

Squeezenet1_1

Description

SqueezeNet 1.1 model from the 'official SqueezeNet repo

Usage

```
squeezenet1_1(pretrained = FALSE, progress)
```

Arguments

| | |
|------------|----------------------------|
| pretrained | pretrained or not |
| progress | to see progress bar or not |

Details

<https://github.com/DeepScale/SqueezeNet/tree/master/SqueezeNet_v1.1>'. SqueezeNet 1.1 has 2.4x less computation and slightly fewer parameters than SqueezeNet 1.0, without sacrificing accuracy.

Value

model

| | |
|-------------------|--------------------------|
| stack_train_valid | <i>Stack_train_valid</i> |
|-------------------|--------------------------|

Description

Stack df_train and df_valid, adds 'valid_col'=TRUE/FALSE for df_valid/df_train

Usage

```
stack_train_valid(df_train, df_valid)
```

Arguments

| | |
|----------|-----------------|
| df_train | train data |
| df_valid | validation data |

Value

data frame

| | |
|-----------|------------------|
| step_stat | <i>Step_stat</i> |
|-----------|------------------|

Description

Register the number of steps done in 'state' for 'p'

Usage

```
step_stat(p, step = 0, ...)
```

Arguments

| | |
|------|-------------------------|
| p | p |
| step | step |
| ... | additional args to pass |

Value

None

| | |
|-----|------------|
| sub | <i>Sub</i> |
|-----|------------|

Description

Sub

Usage

```
## S3 method for class 'torch.Tensor'  
a - b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor

| | |
|----------|-----------------|
| subplots | <i>Subplots</i> |
|----------|-----------------|

Description

Subplots

Usage

```
subplots(nrows = 2, ncols = 2, figsize = NULL, imsize = 4)
```

Arguments

| | |
|---------|-------------------|
| nrows | number of rows |
| ncols | number of columns |
| figsize | figure size |
| imsize | image size |

Value

plot object

sub_mask
*Sub***Description**

Sub

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
a - b
```

Arguments

a tensor

b tensor

Value

tensor

summarization_splitter
*Summarization_splitter***Description**

Custom param splitter for summarization models

Usage

```
summarization_splitter(m, arch)
```

Arguments

m splitter parameter

arch architecture

Value

None

```
summary.fastai.learner.Learner
```

Summary

Description

Summary

Usage

```
## S3 method for class 'fastai.learner.Learner'  
summary(object, ...)
```

Arguments

| | |
|--------|------------------------------|
| object | model |
| ... | additional arguments to pass |

Value

None

Examples

```
## Not run:  
  
summary(model)  
  
## End(Not run)
```

```
summary.fastai.tabular.learner.TabularLearner
```

Summary

Description

Print a summary of 'm' using a output text width of 'n' chars

Usage

```
## S3 method for class 'fastai.tabular.learner.TabularLearner'  
summary(object, ...)
```

Arguments

| | |
|--------|-------------------------------|
| object | model |
| ... | additional parameters to pass |

Value

None

| | |
|--------------|---------------------|
| summary_plot | <i>Summary_plot</i> |
|--------------|---------------------|

Description

Displays the SHAP values (which can be interpreted for feature importance)

Usage

```
summary_plot(object, dpi = 200, ...)
```

Arguments

| | |
|--------|---------------------------|
| object | ShapInterpretation object |
| dpi | dots per inch |
| ... | additional arguments |

Value

None

| | |
|-------|--------------|
| swish | <i>Swish</i> |
|-------|--------------|

Description

Swish

Usage

```
swish(x, inplace = FALSE)
```

Arguments

| | |
|---------|----------------|
| x | tensor |
| inplace | inplace or not |

Value

None

Swish_

Swish

Description

Same as `nn()$Module`, but no need for subclasses to call `super()$__init__`

Usage

`Swish_(...)`

Arguments

`...` parameters to pass

Value

None

tabular

Tabular

Description

Tabular

Usage

`tabular()`

Value

None

TabularDataTable *TabularDataTable*

Description

A ‘Tabular’ object with transforms

Usage

```
TabularDataTable(
  df,
  procs = NULL,
  cat_names = NULL,
  cont_names = NULL,
  y_names = NULL,
  y_block = NULL,
  splits = NULL,
  do_setup = TRUE,
  device = NULL,
  inplace = FALSE,
  reduce_memory = TRUE,
  ...
)
```

Arguments

| | |
|----------------------------|---|
| <code>df</code> | A DataFrame of your data |
| <code>procs</code> | list of preprocess functions |
| <code>cat_names</code> | the names of the categorical variables |
| <code>cont_names</code> | the names of the continuous variables |
| <code>y_names</code> | the names of the dependent variables |
| <code>y_block</code> | the TransformBlock to use for the target |
| <code>splits</code> | How to split your data |
| <code>do_setup</code> | A parameter for if Tabular will run the data through the procs upon initialization |
| <code>device</code> | cuda or cpu |
| <code>inplace</code> | If True, Tabular will not keep a separate copy of your original DataFrame in memory |
| <code>reduce_memory</code> | fastai will attempt to reduce the overall memory usage |
| <code>...</code> | additional parameters to pass |

Value

None

`TabularModel`*TabularModel*

Description

Basic model for tabular data.

Usage

```
TabularModel(  
  emb_szs,  
  n_cont,  
  out_sz,  
  layers,  
  ps = NULL,  
  embed_p = 0,  
  y_range = NULL,  
  use_bn = TRUE,  
  bn_final = FALSE,  
  bn_cont = TRUE,  
  act_cls = nn()$ReLU(inplace = TRUE)  
)
```

Arguments

| | |
|-----------------------|---------------------------|
| <code>emb_szs</code> | embedding size |
| <code>n_cont</code> | number of cont |
| <code>out_sz</code> | output size |
| <code>layers</code> | layers |
| <code>ps</code> | ps |
| <code>embed_p</code> | embed proportion |
| <code>y_range</code> | y range |
| <code>use_bn</code> | use batch normalization |
| <code>bn_final</code> | batch normalization final |
| <code>bn_cont</code> | batch normalization cont |
| <code>act_cls</code> | activation |

Value

None

 TabularTS

TabularTS

Description

A 'DataFrame' wrapper that knows which cols are x/y, and returns rows in '`__getitem__`'

Usage

```

TabularTS(
    df,
    procs = NULL,
    x_names = NULL,
    y_names = NULL,
    block_y = NULL,
    splits = NULL,
    do_setup = TRUE,
    device = NULL,
    inplace = FALSE
)

```

Arguments

| | |
|-----------------------|---|
| <code>df</code> | A DataFrame of your data |
| <code>procs</code> | list of preprocess functions |
| <code>x_names</code> | predictors names |
| <code>y_names</code> | the names of the dependent variables |
| <code>block_y</code> | the TransformBlock to use for the target |
| <code>splits</code> | How to split your data |
| <code>do_setup</code> | A parameter for if Tabular will run the data through the procs upon initialization |
| <code>device</code> | device name |
| <code>inplace</code> | If True, Tabular will not keep a separate copy of your original DataFrame in memory |

Value

None

TabularTSDataloader *TabularTSDataloader*

Description

Transformed 'DataLoader'

Usage

```

TabularTSDataloader(
    dataset,
    bs = 16,
    shuffle = FALSE,
    after_batch = NULL,
    num_workers = 0,
    verbose = FALSE,
    do_setup = TRUE,
    pin_memory = FALSE,
    timeout = 0,
    batch_size = NULL,
    drop_last = FALSE,
    indexed = NULL,
    n = NULL,
    device = NULL
)

```

Arguments

| | |
|-------------|--|
| dataset | data set |
| bs | batch size |
| shuffle | shuffle or not |
| after_batch | after batch |
| num_workers | the number of workers |
| verbose | verbose |
| do_setup | A parameter for if Tabular will run the data through the procs upon initialization |
| pin_memory | pin memory or not |
| timeout | timeout |
| batch_size | batch size |
| drop_last | drop last |
| indexed | indexed |
| n | n |
| device | device name |

Value

None

| | |
|----------------|-----------------------|
| tabular_config | <i>Tabular_config</i> |
|----------------|-----------------------|

Description

Convenience function to easily create a config for ‘TabularModel‘

Usage

```
tabular_config(
  ps = NULL,
  embed_p = 0,
  y_range = NULL,
  use_bn = TRUE,
  bn_final = FALSE,
  bn_cont = TRUE,
  act_cls = nn()$ReLU(inplace = TRUE)
)
```

Arguments

| | |
|----------|---------------------------|
| ps | ps |
| embed_p | embed proportion |
| y_range | y_range |
| use_bn | use batch normalization |
| bn_final | batch normalization final |
| bn_cont | batch normalization |
| act_cls | activation |

Value

None

| | |
|-----------------|------------------------|
| tabular_learner | <i>Tabular learner</i> |
|-----------------|------------------------|

Description

Get a 'Learner' using 'dls', with 'metrics', including a 'TabularModel' created using the remaining params.

Usage

```
tabular_learner(  
    dls,  
    layers = NULL,  
    emb_szs = NULL,  
    config = NULL,  
    n_out = NULL,  
    y_range = NULL,  
    loss_func = NULL,  
    opt_func = Adam(),  
    lr = 0.001,  
    splitter = trainable_params(),  
    cbs = NULL,  
    metrics = NULL,  
    path = NULL,  
    model_dir = "models",  
    wd = NULL,  
    wd_bn_bias = FALSE,  
    train_bn = TRUE,  
    moms = list(0.95, 0.85, 0.95)  
)
```

Arguments

| | |
|-----------|--|
| dls | It is a DataLoaders object. |
| layers | layers |
| emb_szs | emb_szs |
| config | config |
| n_out | n_out |
| y_range | y_range |
| loss_func | It can be any loss function you like. |
| opt_func | It will be used to create an optimizer when Learner.fit is called. |
| lr | It is learning rate. |
| splitter | It is a function that takes self.model and returns a list of parameter groups (or just one parameter group if there are no different parameter groups) |

| | |
|------------|---|
| cbs | It is one or a list of Callbacks to pass to the Learner. |
| metrics | It is an optional list of metrics, that can be either functions or Metrics. |
| path | It is used to save and/or load models. Often path will be inferred from dls, but you can override it or pass a Path object to model_dir. Make sure you can write in path/model_dir! |
| model_dir | It is used to save and/or load models. Often path will be inferred from dls, but you can override it or pass a Path object to model_dir. Make sure you can write in path/model_dir! |
| wd | It is the default weight decay used when training the model. |
| wd_bn_bias | It controls if weight decay is applied to BatchNorm layers and bias. |
| train_bn | It controls if BatchNorm layers are trained even when they are supposed to be frozen according to the splitter. |
| moms | The default momentums used in Learner.fit_one_cycle. |

Value

learner object

tar_extract_at_filename
Tar_extract_at_filename

Description

Extract 'fname' to 'dest'/'fname.name' folder using 'tarfile'

Usage

```
tar_extract_at_filename(fname, dest)
```

Arguments

| | |
|-------|-------------|
| fname | folder name |
| dest | destination |

Value

None

| | |
|--------|---------------|
| tensor | <i>Tensor</i> |
|--------|---------------|

Description

Like ‘torch()\$as_tensor’, but handle lists too, and can pass multiple vector elements directly.

Usage

```
tensor(...)
```

Arguments

... image

Value

None

| | |
|------------|-------------------|
| TensorBBox | <i>TensorBBox</i> |
|------------|-------------------|

Description

Basic type for a tensor of bounding boxes in an image

Usage

```
TensorBBox(x)
```

Arguments

x tensor

Value

None

TensorBBox_create *TensorBBox_create*

Description

TensorBBox_create

Usage

```
TensorBBox_create(x, img_size = NULL)
```

Arguments

| | |
|----------|------------|
| x | tensor |
| img_size | image size |

Value

None

TensorImage *TensorImage*

Description

TensorImage

Usage

```
TensorImage(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

None

TensorImageBW

TensorImageBW

Description

TensorImageBW

Usage

TensorImageBW(x)

Arguments

x tensor

Value

None

TensorMultiCategory

TensorMultiCategory

Description

TensorMultiCategory

Usage

TensorMultiCategory(x)

Arguments

x tensor

Value

None

TensorPoint

TensorPoint

Description

Basic type for points in an image

Usage

TensorPoint(x)

Arguments

x tensor

Value

None

TensorPoint_create

TensorPoint_create

Description

Delegates ('__call__', 'decode', 'setup') to ('encodes', 'decodes', 'setups') if 'split_idx' matches

Usage

TensorPoint_create(...)

Arguments

... arguments to pass

Value

None

| | |
|------------------------|-------------------------------|
| TerminateOnNaNCallback | <i>TerminateOnNaNCallback</i> |
|------------------------|-------------------------------|

Description

TerminateOnNaNCallback

Usage

TerminateOnNaNCallback(...)

Arguments

... parameters to pass

Value

None

| | |
|-------------|--------------------|
| test_loader | <i>Test_loader</i> |
|-------------|--------------------|

Description

Data loader. Combines a dataset and a sampler, and provides an iterable over

Usage

test_loader()

Details

the given dataset. The :class:`~torch.utils.data.DataLoader` supports both map-style and iterable-style datasets with single- or multi-process loading, customizing loading order and optional automatic batching (collation) and memory pinning. See :py:mod:`~torch.utils.data` documentation page for more details.

Value

loader

| | |
|------|--------------------|
| text | <i>Text module</i> |
|------|--------------------|

Description

Text module

Usage

text()

Value

None

| | |
|-----------|------------------|
| TextBlock | <i>TextBlock</i> |
|-----------|------------------|

Description

A ‘TransformBlock’ for texts

Usage

```
TextBlock(
    tok_tfm,
    vocab = NULL,
    is_lm = FALSE,
    seq_len = 72,
    backwards = FALSE,
    min_freq = 3,
    max_vocab = 60000,
    special_toks = NULL,
    pad_tok = NULL
)
```

Arguments

| | |
|--------------|--------------|
| tok_tfm | tok_tfm |
| vocab | vocab |
| is_lm | is_lm |
| seq_len | seq_len |
| backwards | backwards |
| min_freq | min_freq |
| max_vocab | max_vocab |
| special_toks | special_toks |
| pad_tok | pad_tok |

Value

block object

TextBlock_from_df *TextBlock_from_df*

Description

Build a 'TextBlock' from a dataframe using 'text_cols'

Usage

```
TextBlock_from_df(  
    text_cols,  
    vocab = NULL,  
    is_lm = FALSE,  
    seq_len = 72,  
    backwards = FALSE,  
    min_freq = 3,  
    max_vocab = 60000,  
    tok = NULL,  
    rules = NULL,  
    sep = " ",  
    n_workers = 6,  
    mark_fields = NULL,  
    tok_text_col = "text"  
)
```

Arguments

| | |
|--------------|--------------------|
| text_cols | text columns |
| vocab | vocabulary |
| is_lm | is_lm |
| seq_len | sequence length |
| backwards | backwards |
| min_freq | minimum frequency |
| max_vocab | max vocabulary |
| tok | tokenizer |
| rules | rules |
| sep | separator |
| n_workers | number workers |
| mark_fields | mark_fields |
| tok_text_col | result column name |

Value

None

 TextBlock_from_folder *TextBlock_from_folder*

Description

Build a 'TextBlock' from a 'path'

Usage

```
TextBlock_from_folder(
    path,
    vocab = NULL,
    is_lm = FALSE,
    seq_len = 72,
    backwards = FALSE,
    min_freq = 3,
    max_vocab = 60000,
    tok = NULL,
    rules = NULL,
    extensions = NULL,
    folders = NULL,
    output_dir = NULL,
    skip_if_exists = TRUE,
    output_names = NULL,
    n_workers = 6,
    encoding = "utf8"
)
```

Arguments

| | |
|------------|-------------------|
| path | path |
| vocab | vocabulary |
| is_lm | is_lm |
| seq_len | sequence length |
| backwards | backwards |
| min_freq | minimum frequency |
| max_vocab | max vocabulary |
| tok | tokenizer |
| rules | rules |
| extensions | extensions |

| | |
|----------------|-------------------|
| folders | folders |
| output_dir | output_dir |
| skip_if_exists | skip_if_exists |
| output_names | output_names |
| n_workers | number of workers |
| encoding | encoding |

Value

None

TextDataLoaders_from_csv

TextDataLoaders_from_csv

Description

Create from 'csv' file in 'path/csv_fname'

Usage

```
TextDataLoaders_from_csv(
    path,
    csv_fname = "labels.csv",
    header = "infer",
    delimiter = NULL,
    valid_pct = 0.2,
    seed = NULL,
    text_col = 0,
    label_col = 1,
    label_delim = NULL,
    y_block = NULL,
    text_vocab = NULL,
    is_lm = FALSE,
    valid_col = NULL,
    tok_tfm = NULL,
    seq_len = 72,
    backwards = FALSE,
    bs = 64,
    val_bs = NULL,
    shuffle_train = TRUE,
    device = NULL
)
```

Arguments

| | |
|---------------|------------------------|
| path | path |
| csv_fname | csv file name |
| header | header |
| delimiter | delimiter |
| valid_pct | valid_ation percentage |
| seed | random seed |
| text_col | text column |
| label_col | label column |
| label_delim | label separator |
| y_block | y_block |
| text_vocab | text vocabulary |
| is_lm | is_lm |
| valid_col | valid column |
| tok_tfm | tok_tfm |
| seq_len | seq_len |
| backwards | backwards |
| bs | batch size |
| val_bs | validation batch size |
| shuffle_train | shuffle train data |
| device | device |

Value

text loader

TextDataLoaders_from_df

TextDataLoaders_from_df

Description

Create from 'df' in 'path' with 'valid_pct'

Usage

```
TextDataLoaders_from_df(  
    df,  
    path = ".",  
    valid_pct = 0.2,  
    seed = NULL,  
    text_col = 0,  
    label_col = 1,  
    label_delim = NULL,  
    y_block = NULL,  
    text_vocab = NULL,  
    is_lm = FALSE,  
    valid_col = NULL,  
    tok_tfm = NULL,  
    seq_len = 72,  
    backwards = FALSE,  
    bs = 64,  
    val_bs = NULL,  
    shuffle_train = TRUE,  
    device = NULL  
)
```

Arguments

| | |
|---------------|--|
| df | df |
| path | path |
| valid_pct | validation percentage |
| seed | seed |
| text_col | text_col |
| label_col | label_col |
| label_delim | label_delim |
| y_block | y_block |
| text_vocab | text_vocab |
| is_lm | is_lm |
| valid_col | valid_col |
| tok_tfm | tok_tfm |
| seq_len | seq_len |
| backwards | backwards |
| bs | batch size |
| val_bs | validation batch size, if not specified then val_bs is the same as bs. |
| shuffle_train | shuffle_train |
| device | device |

Value

text loader

 TextDataLoaders_from_folder
TextDataLoaders_from_folder

Description

Create from imagenet style dataset in 'path' with 'train' and 'valid' subfolders (or provide 'valid_pct')

Usage

```
TextDataLoaders_from_folder(
  path,
  train = "train",
  valid = "valid",
  valid_pct = NULL,
  seed = NULL,
  vocab = NULL,
  text_vocab = NULL,
  is_lm = FALSE,
  tok_tfm = NULL,
  seq_len = 72,
  backwards = FALSE,
  bs = 64,
  val_bs = NULL,
  shuffle_train = TRUE,
  device = NULL
)
```

Arguments

| | |
|------------|-----------------------|
| path | path |
| train | train data |
| valid | validation data |
| valid_pct | validation percentage |
| seed | random seed |
| vocab | vocabulary |
| text_vocab | text_vocab |
| is_lm | is_lm |
| tok_tfm | tok_tfm |
| seq_len | seq_len |

| | |
|---------------|-----------------------|
| backwards | backwards |
| bs | batch size |
| val_bs | validation batch size |
| shuffle_train | shuffle train data |
| device | device |

Value

text loader

| | |
|-------------|--------------------|
| TextLearner | <i>TextLearner</i> |
|-------------|--------------------|

Description

Basic class for a ‘Learner’ in NLP.

Usage

```
TextLearner(
    dls,
    model,
    alpha = 2,
    beta = 1,
    moms = list(0.8, 0.7, 0.8),
    loss_func = NULL,
    opt_func = Adam(),
    lr = 0.001,
    splitter = trainable_params(),
    cbs = NULL,
    metrics = NULL,
    path = NULL,
    model_dir = "models",
    wd = NULL,
    wd_bn_bias = FALSE,
    train_bn = TRUE
)
```

Arguments

| | |
|-------|-------|
| dls | dls |
| model | model |
| alpha | alpha |
| beta | beta |
| moms | moms |

| | |
|------------|------------|
| loss_func | loss_func |
| opt_func | opt_func |
| lr | lr |
| splitter | splitter |
| cbs | cbs |
| metrics | metrics |
| path | path |
| model_dir | model_dir |
| wd | wd |
| wd_bn_bias | wd_bn_bias |
| train_bn | train_bn |

Value

None

TextLearner_load_encoder
Load_encoder

Description

Load the encoder 'file' from the model directory, optionally ensuring it's on 'device'

Usage

```
TextLearner_load_encoder(file, device = NULL)
```

Arguments

| | |
|--------|--------|
| file | file |
| device | device |

Value

None

TextLearner_load_pretrained
Load_pretrained

Description

Load a pretrained model and adapt it to the data vocabulary.

Usage

```
TextLearner_load_pretrained(wgts_fname, vocab_fname, model = NULL)
```

Arguments

| | |
|-------------|-------------|
| wgts_fname | wgts_fname |
| vocab_fname | vocab_fname |
| model | model |

Value

None

TextLearner_save_encoder
Save_encoder

Description

Save the encoder to 'file' in the model directory

Usage

```
TextLearner_save_encoder(file)
```

Arguments

| | |
|------|------|
| file | file |
|------|------|

Value

None

```
text_classifier_learner
    Text_classifier_learner
```

Description

Create a ‘Learner’ with a text classifier from ‘dls’ and ‘arch’.

Usage

```
text_classifier_learner(  
    dls,  
    arch,  
    seq_len = 72,  
    config = NULL,  
    backwards = FALSE,  
    pretrained = TRUE,  
    drop_mult = 0.5,  
    n_out = NULL,  
    lin_ftrs = NULL,  
    ps = NULL,  
    max_len = 1440,  
    y_range = NULL,  
    loss_func = NULL,  
    opt_func = Adam(),  
    lr = 0.001,  
    splitter = trainable_params,  
    cbs = NULL,  
    metrics = NULL,  
    path = NULL,  
    model_dir = "models",  
    wd = NULL,  
    wd_bn_bias = FALSE,  
    train_bn = TRUE,  
    moms = list(0.95, 0.85, 0.95)  
)
```

Arguments

| | |
|------------|------------|
| dls | dls |
| arch | arch |
| seq_len | seq_len |
| config | config |
| backwards | backwards |
| pretrained | pretrained |

| | |
|------------|------------|
| drop_mult | drop_mult |
| n_out | n_out |
| lin_ftrs | lin_ftrs |
| ps | ps |
| max_len | max_len |
| y_range | y_range |
| loss_func | loss_func |
| opt_func | opt_func |
| lr | lr |
| splitter | splitter |
| cbs | cbs |
| metrics | metrics |
| path | path |
| model_dir | model_dir |
| wd | wd |
| wd_bn_bias | wd_bn_bias |
| train_bn | train_bn |
| moms | moms |

Value

None

| | |
|--------|---------------|
| TfmdDL | <i>TfmdDL</i> |
|--------|---------------|

Description

Transformed 'DataLoader'

Usage

```
TfmdDL(
  dataset,
  bs = 64,
  shuffle = FALSE,
  num_workers = NULL,
  verbose = FALSE,
  do_setup = TRUE,
  pin_memory = FALSE,
  timeout = 0,
  batch_size = NULL,
```

```

    drop_last = FALSE,
    indexed = NULL,
    n = NULL,
    device = NULL,
    after_batch = NULL,
    ...
)

```

Arguments

| | |
|-------------|------------------------------|
| dataset | dataset |
| bs | batch size |
| shuffle | shuffle |
| num_workers | number of workers |
| verbose | verbose |
| do_setup | do setup |
| pin_memory | pin memory |
| timeout | timeout |
| batch_size | batch size |
| drop_last | drop last |
| indexed | indexed |
| n | int, n |
| device | device |
| after_batch | after_batch |
| ... | additional arguments to pass |

Value

None

TfmdLists

TfmdLists

Description

A ‘Pipeline’ of ‘tfms’ applied to a collection of ‘items’

Usage

```
TfmdLists(...)
```

Arguments

... parameters to pass

| | |
|-----------|------------------|
| TfmResize | <i>TfmResize</i> |
|-----------|------------------|

Description

Temporary fix to allow image resizing transform

Usage

```
TfmResize(size, interp_mode = "bilinear")
```

Arguments

| | |
|-------------|--------------------|
| size | size |
| interp_mode | interpolation mode |

Value

None

| | |
|------|--------------------|
| timm | <i>Timm module</i> |
|------|--------------------|

Description

Timm module

Usage

```
timm()
```

Value

None

| | |
|--------------|---------------------|
| timm_learner | <i>Timm_learner</i> |
|--------------|---------------------|

Description

Build a convnet style learner from 'dls' and 'arch' using the 'timm' library

Usage

```
timm_learner(dls, arch, ...)
```

Arguments

| | |
|------|----------------------|
| dls | dataloader |
| arch | model architecture |
| ... | additional arguments |

Value

None

| | |
|------------------|--------------------|
| timm_list_models | <i>Timm models</i> |
|------------------|--------------------|

Description

Timm models

Usage

```
timm_list_models(...)
```

Arguments

| | |
|-----|--------------------|
| ... | parameters to pass |
|-----|--------------------|

Value

vector

| | |
|-----|--------------------------|
| tms | <i>Timeseries module</i> |
|-----|--------------------------|

Description

Timeseries module

Usage

tms()

Value

None

| | |
|-----------|------------------|
| tokenize1 | <i>Tokenize1</i> |
|-----------|------------------|

Description

Call 'TokenizeWithRules' with a single text

Usage

tokenize1(text, tok, rules = NULL, post_rules = NULL)

Arguments

| | |
|------------|------------|
| text | text |
| tok | tok |
| rules | rules |
| post_rules | post_rules |

Value

None

 Tokenizer

Tokenizer

Description

Provides a consistent ‘Transform’ interface to tokenizers operating on ‘DataFrame’s and folders

Usage

```
Tokenizer(
  tok,
  rules = NULL,
  counter = NULL,
  lengths = NULL,
  mode = NULL,
  sep = " "
)
```

Arguments

| | |
|---------|-----------|
| tok | tokenizer |
| rules | rules |
| counter | counter |
| lengths | lengths |
| mode | mode |
| sep | separator |

Value

None

 Tokenizer_from_df

Tokenizer_from_df

Description

Tokenizer_from_df

Usage

```

Tokenizer_from_df(
  text_cols,
  tok = NULL,
  rules = NULL,
  sep = " ",
  n_workers = 6,
  mark_fields = NULL,
  tok_text_col = "text"
)

```

Arguments

| | |
|--------------|--------------------|
| text_cols | text columns |
| tok | tokenizer |
| rules | special rules |
| sep | separator |
| n_workers | number of workers |
| mark_fields | mark fields |
| tok_text_col | output column name |

Value

None

| | |
|-------------------|--------------------------|
| TokenizeWithRules | <i>TokenizeWithRules</i> |
|-------------------|--------------------------|

Description

A wrapper around ‘tok’ which applies ‘rules’, then tokenizes, then applies ‘post_rules’

Usage

```
TokenizeWithRules(tok, rules = NULL, post_rules = NULL)
```

Arguments

| | |
|------------|------------|
| tok | tokenizer |
| rules | rules |
| post_rules | post_rules |

Value

None

| | |
|--------------|---------------------|
| tokenize_csv | <i>Tokenize_csv</i> |
|--------------|---------------------|

Description

Tokenize texts in the 'text_cols' of the csv 'fname' in parallel using 'n_workers'

Usage

```
tokenize_csv(  
    fname,  
    text_cols,  
    outname = NULL,  
    n_workers = 4,  
    rules = NULL,  
    mark_fields = NULL,  
    tok = NULL,  
    header = "infer",  
    chunksize = 50000  
)
```

Arguments

| | |
|-------------|-------------------|
| fname | file name |
| text_cols | text columns |
| outname | outname |
| n_workers | number of workers |
| rules | rules |
| mark_fields | mark fields |
| tok | tokenizer |
| header | header |
| chunksize | chunk size |

Value

None

| | |
|-------------|--------------------|
| tokenize_df | <i>Tokenize_df</i> |
|-------------|--------------------|

Description

Tokenize texts in 'df[text_cols]' in parallel using 'n_workers'

Usage

```
tokenize_df(
  df,
  text_cols,
  n_workers = 6,
  rules = NULL,
  mark_fields = NULL,
  tok = NULL,
  tok_text_col = "text"
)
```

Arguments

| | |
|--------------|-------------------|
| df | data frame |
| text_cols | text columns |
| n_workers | number of workers |
| rules | rules |
| mark_fields | mark_fields |
| tok | tokenizer |
| tok_text_col | tok_text_col |

Value

None

| | |
|----------------|-----------------------|
| tokenize_files | <i>Tokenize_files</i> |
|----------------|-----------------------|

Description

Tokenize text 'files' in parallel using 'n_workers'

Usage

```

tokenize_files(
  files,
  path,
  output_dir,
  output_names = NULL,
  n_workers = 6,
  rules = NULL,
  tok = NULL,
  encoding = "utf8",
  skip_if_exists = FALSE
)

```

Arguments

| | |
|----------------|----------------|
| files | files |
| path | path |
| output_dir | output_dir |
| output_names | output_names |
| n_workers | n_workers |
| rules | rules |
| tok | tokenizer |
| encoding | encoding |
| skip_if_exists | skip_if_exists |

Value

None

| | |
|-----------------|------------------------|
| tokenize_folder | <i>Tokenize_folder</i> |
|-----------------|------------------------|

Description

Tokenize text files in ‘path‘ in parallel using ‘n_workers‘

Usage

```

tokenize_folder(
  path,
  extensions = NULL,
  folders = NULL,
  output_dir = NULL,
  skip_if_exists = TRUE,
)

```

```

    output_names = NULL,
    n_workers = 6,
    rules = NULL,
    tok = NULL,
    encoding = "utf8"
)

```

Arguments

| | |
|----------------|-------------------|
| path | path |
| extensions | extensions |
| folders | folders |
| output_dir | output_dir |
| skip_if_exists | skip_if_exists |
| output_names | output_names |
| n_workers | number of workers |
| rules | rules |
| tok | tokenizer |
| encoding | encoding |

Value

None

| | |
|----------------|-----------------------|
| tokenize_texts | <i>Tokenize_texts</i> |
|----------------|-----------------------|

Description

Tokenize ‘texts’ in parallel using ‘n_workers’

Usage

```
tokenize_texts(texts, n_workers = 6, rules = NULL, tok = NULL)
```

Arguments

| | |
|-----------|-----------|
| texts | texts |
| n_workers | n_workers |
| rules | rules |
| tok | tok |

Value

None

| | |
|----------------|-----------------------|
| top_k_accuracy | <i>Top_k_accuracy</i> |
|----------------|-----------------------|

Description

Computes the Top-k accuracy ('targ' is in the top 'k' predictions of 'inp')

Usage

```
top_k_accuracy(inp, targ, k = 5, axis = -1)
```

Arguments

| | |
|------|-------------|
| inp | predictions |
| targ | targets |
| k | k |
| axis | axis |

Value

None

Examples

```
## Not run:  
  
loaders = loaders()  
  
data = Data_Loaders(loaders['train'], loaders['valid'])$cuda()  
  
model = nn$Sequential() +  
  nn$Flatten() +  
  nn$Linear(28L * 28L, 10L)  
metrics = list(accuracy, top_k_accuracy)  
learn = Learner(data, model, loss_func = F$cross_entropy, opt_func = Adam,  
  metrics = metrics)  
  
## End(Not run)
```

| | |
|-------|------------------------|
| torch | <i>Builtins module</i> |
|-------|------------------------|

Description

Builtins module

Usage

torch()

Value

None

| | |
|--------------|---------------------|
| total_params | <i>Total_params</i> |
|--------------|---------------------|

Description

Give the number of parameters of a module and if it's trainable or not

Usage

total_params(m)

Arguments

m m parameter

Value

None

| | |
|----------|-----------------|
| ToTensor | <i>ToTensor</i> |
|----------|-----------------|

Description

Convert item to appropriate tensor class

Usage

```
ToTensor(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|-----------|---------------------|
| enc | encoder |
| dec | decoder |
| split_idx | int, split by index |
| order | order |

Value

None

| | |
|-----------------|------------------------|
| to_bytes_format | <i>To_bytes_format</i> |
|-----------------|------------------------|

Description

Convert to bytes, default to PNG format

Usage

```
to_bytes_format(img, format = "png")
```

Arguments

| | |
|--------|--------|
| img | image |
| format | format |

Value

None

| | |
|----------|-----------------|
| to_image | <i>To_image</i> |
|----------|-----------------|

Description

Convert a tensor or array to a PIL int8 Image

Usage

```
to_image(x)
```

Arguments

| | |
|---|--------|
| x | tensor |
|---|--------|

Value

None

| | |
|-----------|------------------|
| to_matrix | <i>To_matrix</i> |
|-----------|------------------|

Description

To matrix

Usage

```
to_matrix(obj, matrix = TRUE)
```

Arguments

| | |
|--------|-------------------|
| obj | learner/model |
| matrix | bool, to R matrix |

| | |
|----------|-----------------|
| to_thumb | <i>To_thumb</i> |
|----------|-----------------|

Description

Same as 'thumbnail', but uses a copy

Usage

```
to_thumb(img, h, w = NULL)
```

Arguments

| | |
|-----|--------|
| img | image |
| h | height |
| w | width |

Value

None

| | |
|--------|---------------------|
| to_xla | <i>Learn to XLA</i> |
|--------|---------------------|

Description

Distribute the training across TPUs

Usage

```
to_xla(object)
```

Arguments

| | |
|--------|-----------------|
| object | learner / model |
|--------|-----------------|

Value

None

| | |
|-----------------|------------------------|
| TrackerCallback | <i>TrackerCallback</i> |
|-----------------|------------------------|

Description

A 'Callback' that keeps track of the best value in 'monitor'.

Usage

```
TrackerCallback(monitor = "valid_loss", comp = NULL, min_delta = 0)
```

Arguments

| | |
|-----------|------------------|
| monitor | monitor the loss |
| comp | comp |
| min_delta | minimum delta |

Value

None

| | |
|------------------|-------------------------|
| trainable_params | <i>Trainable_params</i> |
|------------------|-------------------------|

Description

Return all trainable parameters of 'm'

Usage

```
trainable_params(m)
```

Arguments

| | |
|---|----------------------|
| m | trainable parameters |
|---|----------------------|

Value

None

| | |
|-------------------|--------------------------|
| TrainEvalCallback | <i>TrainEvalCallback</i> |
|-------------------|--------------------------|

Description

TrainEvalCallback

Usage

```
TrainEvalCallback(...)
```

Arguments

... parameters to pass

Value

None

| | |
|--------------|---------------------|
| train_loader | <i>Train_loader</i> |
|--------------|---------------------|

Description

Data loader. Combines a dataset and a sampler, and provides an iterable over

Usage

```
train_loader()
```

Details

the given dataset. The :class:`~torch.utils.data.DataLoader` supports both map-style and iterable-style datasets with single- or multi-process loading, customizing loading order and optional automatic batching (collation) and memory pinning.

Value

loader

| | |
|-----------|------------------|
| Transform | <i>Transform</i> |
|-----------|------------------|

Description

Delegates (`__call__`, `decode`, `setup`) to (`encodes`, `decodes`, `setups`) if `split_idx` matches

Usage

```
Transform(enc = NULL, dec = NULL, split_idx = NULL, order = NULL)
```

Arguments

| | |
|------------------------|----------------|
| <code>enc</code> | encoder |
| <code>dec</code> | decoder |
| <code>split_idx</code> | split by index |
| <code>order</code> | order |

Value

None

| | |
|----------------|-----------------------|
| TransformBlock | <i>TransformBlock</i> |
|----------------|-----------------------|

Description

A basic wrapper that links defaults transforms for the data block API

Usage

```
TransformBlock(
    type_tfms = NULL,
    item_tfms = NULL,
    batch_tfms = NULL,
    dl_type = NULL,
    dls_kwargs = NULL
)
```

Arguments

| | |
|-------------------------|---|
| <code>type_tfms</code> | transformation type |
| <code>item_tfms</code> | item transformation type |
| <code>batch_tfms</code> | one or several transforms applied to the batches once they are formed |
| <code>dl_type</code> | DL application |
| <code>dls_kwargs</code> | additional arguments |

Value

block

transformers

Transformers

Description

Transformers

Usage

transformers()

Value

None

TransformersDropOutput

TransformersDropOutput

Description

TransformersDropOutput

Usage

TransformersDropOutput()

Value

None

TransformersTokenizer *TransformersTokenizer*

Description

TransformersTokenizer

Usage

TransformersTokenizer(tokenizer)

Arguments

tokenizer tokenizer object

Value

None

trunc_normal_ *Trunc_normal_*

Description

Truncated normal initialization (approximation)

Usage

trunc_normal_(x, mean = 0, std = 1)

Arguments

x tensor
mean mean
std standard deviation

Value

tensor

| | |
|---------|----------------|
| TSBlock | <i>TSBlock</i> |
|---------|----------------|

Description

A TimeSeries Block to process one timeseries

Usage

```
TSBlock(...)
```

Arguments

```
...           parameters to pass
```

Value

None

| | |
|------------------------|-------------------------------|
| TSDataLoaders_from_dfs | <i>TSDataLoaders_from_dfs</i> |
|------------------------|-------------------------------|

Description

Create a DataLoader from a df_train and df_valid

Usage

```
TSDataLoaders_from_dfs(  
    df_train,  
    df_valid,  
    path = ".",  
    x_cols = NULL,  
    label_col = NULL,  
    y_block = NULL,  
    item_tfms = NULL,  
    batch_tfms = NULL,  
    bs = 64,  
    val_bs = NULL,  
    shuffle_train = TRUE,  
    device = NULL  
)
```

Arguments

| | |
|---------------|-----------------------|
| df_train | train data |
| df_valid | validation data |
| path | path (optional) |
| x_cols | predictors |
| label_col | label/output column |
| y_block | y_block |
| item_tfms | item transformations |
| batch_tfms | batch transformations |
| bs | batch size |
| val_bs | validation batch size |
| shuffle_train | shuffle train data |
| device | device name |

Value

None

TSDDataTable

TSDDataTable

Description

A 'DataFrame' wrapper that knows which cols are x/y, and returns rows in '`__getitem__`'

Usage

```
TSDDataTable(  
    df,  
    procs = NULL,  
    x_names = NULL,  
    y_names = NULL,  
    block_y = NULL,  
    splits = NULL,  
    do_setup = TRUE,  
    device = NULL,  
    inplace = FALSE  
)
```

Arguments

| | |
|----------|---|
| df | A DataFrame of your data |
| procs | list of preprocess functions |
| x_names | predictors names |
| y_names | the names of the dependent variables |
| block_y | the TransformBlock to use for the target |
| splits | How to split your data |
| do_setup | A parameter for if Tabular will run the data through the procs upon initialization |
| device | device name |
| inplace | If True, Tabular will not keep a separate copy of your original DataFrame in memory |

Value

None

TSeries

TSeries

Description

Basic Time series wrapper

Usage

TSeries(...)

Arguments

... parameters to pass

Value

None

| | |
|----------------|-----------------------|
| TSeries_create | <i>TSeries_create</i> |
|----------------|-----------------------|

Description

TSeries_create

Usage

```
TSeries_create(x, ...)
```

Arguments

| | |
|-----|-----------------------|
| x | tensor |
| ... | additional parameters |

Value

tensor

Examples

```
## Not run:  
  
res = TSeries_create(as.array(runif(100)))  
res %>% show(title = 'R array') %>% plot(dpi = 200)  
  
## End(Not run)
```

| | |
|-----------|------------------|
| UnetBlock | <i>UnetBlock</i> |
|-----------|------------------|

Description

A quasi-UNet block, using 'PixelShuffle_ICNR upsampling'.

Usage

```
UnetBlock(
  up_in_c,
  x_in_c,
  hook,
  final_div = TRUE,
  blur = FALSE,
  act_cls = nn()$ReLU,
  self_attention = FALSE,
  init = nn()$init$kaiming_normal_,
  norm_type = NULL,
  ks = 3,
  stride = 1,
  padding = NULL,
  bias = NULL,
  ndim = 2,
  bn_1st = TRUE,
  transpose = FALSE,
  xtra = NULL,
  bias_std = 0.01,
  dilation = 1,
  groups = 1,
  padding_mode = "zeros"
)
```

Arguments

| | |
|-----------------------------|---|
| <code>up_in_c</code> | <code>up_in_c</code> parameter |
| <code>x_in_c</code> | <code>x_in_c</code> parameter |
| <code>hook</code> | The hook is set to this intermediate layer to store the output needed for this block. |
| <code>final_div</code> | final div |
| <code>blur</code> | blur is used to avoid checkerboard artifacts at each layer. |
| <code>act_cls</code> | activation |
| <code>self_attention</code> | <code>self_attention</code> determines if we use a self-attention layer |
| <code>init</code> | initializer |
| <code>norm_type</code> | normalization type |
| <code>ks</code> | kernel size |
| <code>stride</code> | stride |
| <code>padding</code> | padding mode |
| <code>bias</code> | bias |
| <code>ndim</code> | number of dimensions |
| <code>bn_1st</code> | batch normalization 1st |
| <code>transpose</code> | transpose |

| | |
|--------------|-------------------------|
| extra | extra |
| bias_std | bias standard deviation |
| dilation | dilation |
| groups | groups |
| padding_mode | The mode of padding |

Value

None

| | |
|-------------|--------------------|
| UNET_CONFIG | <i>UNET_CONFIG</i> |
|-------------|--------------------|

Description

Convenience function to easily create a config for 'DynamicUNET'

Usage

```
UNET_CONFIG(
    blur = FALSE,
    blur_final = TRUE,
    self_attention = FALSE,
    y_range = NULL,
    last_cross = TRUE,
    bottle = FALSE,
    act_cls = nn()$ReLU,
    init = nn()$init$kaiming_normal_,
    norm_type = NULL
)
```

Arguments

| | |
|----------------|---|
| blur | blur is used to avoid checkerboard artifacts at each layer. |
| blur_final | blur final is specific to the last layer. |
| self_attention | self_attention determines if we use a self attention layer at the third block before the end. |
| y_range | If y_range is passed, the last activations go through a sigmoid rescaled to that range. |
| last_cross | last cross |
| bottle | bottle |
| act_cls | activation |
| init | initializer |
| norm_type | normalization type |

Value

None

| | |
|--------------|---------------------|
| UNET_learner | <i>UNET_learner</i> |
|--------------|---------------------|

Description

Build a UNET learner from 'dls' and 'arch'

Usage

UNET_learner(dls, arch, ...)

Arguments

| | |
|------|----------------------|
| dls | dataloader |
| arch | architecture |
| ... | additional arguments |

Value

None

| | |
|----------|-------------------------|
| unfreeze | <i>Unfreeze a model</i> |
|----------|-------------------------|

Description

Unfreeze a model

Usage

unfreeze(object, ...)

Arguments

| | |
|--------|-----------------------|
| object | A model |
| ... | Additional parameters |

Value

None

Examples

```
## Not run:  
learnR %>% unfreeze()  
  
## End(Not run)
```

| | |
|----------------|-----------------------|
| uniform_blur2d | <i>Uniform_blur2d</i> |
|----------------|-----------------------|

Description

Uniformly apply blurring

Usage

```
uniform_blur2d(x, s)
```

Arguments

| | |
|---|--------|
| x | image |
| s | effect |

Value

None

| | |
|------|--------------------|
| upit | <i>Upit module</i> |
|------|--------------------|

Description

Upit module

Usage

```
upit()
```

Value

None

URLs_ADULT_SAMPLE *ADULT_SAMPLE dataset*

Description

download ADULT_SAMPLE dataset

Usage

```
URLs_ADULT_SAMPLE(filename = "ADULT_SAMPLE", untar = TRUE)
```

Arguments

filename the name of the file
untar logical, whether to untar the '.tgz' file

Value

None

Examples

```
## Not run:  
  
URLs_ADULT_SAMPLE()  
  
## End(Not run)
```

URLs_AG_NEWS *AG_NEWS dataset*

Description

download AG_NEWS dataset

Usage

```
URLs_AG_NEWS(filename = "AG_NEWS", untar = TRUE)
```

Arguments

filename the name of the file
untar logical, whether to untar the '.tgz' file

Value

None

Examples

```
## Not run:
```

```
URLs_AG_NEWS()
```

```
## End(Not run)
```

```
URLs_AMAZON_REVIEWSAMAZON_REVIEWS
```

```
AMAZON_REVIEWSAMAZON_REVIEWS dataset
```

Description

download AMAZON_REVIEWSAMAZON_REVIEWS dataset

Usage

```
URLs_AMAZON_REVIEWSAMAZON_REVIEWS(  
  filename = "AMAZON_REVIEWSAMAZON_REVIEWS",  
  untar = TRUE  
)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_AMAZON_REVIEWS_POLARITY
AMAZON_REVIEWS_POLARITY dataset

Description

download AMAZON_REVIEWS_POLARITY dataset

Usage

```
URLs_AMAZON_REVIEWS_POLARITY(  
  filename = "AMAZON_REVIEWS_POLARITY",  
  untar = TRUE  
)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_BIWI_HEAD_POSE *BIWI_HEAD_POSE dataset*

Description

download BIWI_HEAD_POSE dataset

Usage

```
URLs_BIWI_HEAD_POSE(filename = "BIWI_HEAD_POSE", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|------------------|----------------------------|
| URLs_CALTECH_101 | <i>CALTECH_101 dataset</i> |
|------------------|----------------------------|

Description

download CALTECH_101 dataset

Usage

```
URLs_CALTECH_101(filename = "CALTECH_101", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|-------------|-----------------------|
| URLs_CAMVID | <i>CAMVID dataset</i> |
|-------------|-----------------------|

Description

download CAMVID dataset

Usage

```
URLs_CAMVID(filename = "CAMVID", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|------------------|----------------------------|
| URLs_CAMVID_TINY | <i>CAMVID_TINY dataset</i> |
|------------------|----------------------------|

Description

download CAMVID_TINY dataset

Usage

```
URLs_CAMVID_TINY(filename = "CAMVID_TINY", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|-----------|---------------------|
| URLs_CARS | <i>CARS dataset</i> |
|-----------|---------------------|

Description

download CARS dataset

Usage

```
URLs_CARS(filename = "CARS", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|------------|----------------------|
| URLs_CIFAR | <i>CIFAR dataset</i> |
|------------|----------------------|

Description

download CIFAR dataset

Usage

```
URLs_CIFAR(filename = "CIFAR", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|----------------|--------------------------|
| URLs_CIFAR_100 | <i>CIFAR_100 dataset</i> |
|----------------|--------------------------|

Description

download CIFAR_100 dataset

Usage

```
URLs_CIFAR_100(filename = "CIFAR_100", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_COCO_TINY *COCO_TINY dataset*

Description

download COCO_TINY dataset

Usage

```
URLs_COCO_TINY(filename = "COCO_TINY", untar = TRUE)
```

Arguments

filename the name of the file
untar logical, whether to untar the '.tgz' file

Value

None

URLs_CUB_200_2011 *CUB_200_2011 dataset*

Description

download CUB_200_2011 dataset

Usage

```
URLs_CUB_200_2011(filename = "CUB_200_2011", untar = TRUE)
```

Arguments

filename the name of the file
untar logical, whether to untar the '.tgz' file

Value

None

| | |
|--------------|------------------------|
| URLs_DBPEDIA | <i>DBPEDIA dataset</i> |
|--------------|------------------------|

Description

download DBPEDIA dataset

Usage

```
URLs_DBPEDIA(filename = "DBPEDIA", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|-----------|---------------------|
| URLs_DOGS | <i>DOGS dataset</i> |
|-----------|---------------------|

Description

download DOGS dataset

Usage

```
URLs_DOGS(filename = "DOGS", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|--------------|------------------------|
| URLs_FLOWERS | <i>FLOWERS dataset</i> |
|--------------|------------------------|

Description

download FLOWERS dataset

Usage

```
URLs_FLOWERS(filename = "FLOWERS", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|-----------|---------------------|
| URLs_FOOD | <i>FOOD dataset</i> |
|-----------|---------------------|

Description

download FOOD dataset

Usage

```
URLs_FOOD(filename = "FOOD", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_HORSE_2_ZEBRA *HORSE_2_ZEBRA dataset*

Description

download HORSE_2_ZEBRA dataset

Usage

```
URLs_HORSE_2_ZEBRA(filename = "horse2zebra", unzip = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| unzip | logical, whether to unzip the '.zip' file |

Value

None

URLs_HUMAN_NUMBERS *HUMAN_NUMBERS dataset*

Description

download HUMAN_NUMBERS dataset

Usage

```
URLs_HUMAN_NUMBERS(filename = "HUMAN_NUMBERS", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|-----------------|---------------------------|
| URLs_IMAGENETTE | <i>IMAGENETTE dataset</i> |
|-----------------|---------------------------|

Description

download IMAGENETTE dataset

Usage

```
URLs_IMAGENETTE(filename = "IMAGENETTE", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

| | |
|---------------------|-------------------------------|
| URLs_IMAGENETTE_160 | <i>IMAGENETTE_160 dataset</i> |
|---------------------|-------------------------------|

Description

download IMAGENETTE_160 dataset

Usage

```
URLs_IMAGENETTE_160(filename = "IMAGENETTE_160", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_IMAGENETTE_320 *IMAGENETTE_320 dataset*

Description

download IMAGENETTE_320 dataset

Usage

```
URLs_IMAGENETTE_320(filename = "IMAGENETTE_320", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_IMAGEWOOF *IMAGEWOOF dataset*

Description

download IMAGEWOOF dataset

Usage

```
URLs_IMAGEWOOF(filename = "IMAGEWOOF", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_IMAGEWOOF_160 *IMAGEWOOF_160 dataset*

Description

download IMAGEWOOF_160 dataset

Usage

```
URLs_IMAGEWOOF_160(filename = "IMAGEWOOF_160", untar = TRUE)
```

Arguments

| | |
|----------|---|
| filename | the name of the file |
| untar | logical, whether to untar the '.tgz' file |

Value

None

URLs_IMAGEWOOF_320 *IMAGEWOOF_320 dataset*

Description

download IMAGEWOOF_320 dataset

Usage

```
URLs_IMAGEWOOF_320(filename = "IMAGEWOOF_320", untar = TRUE)
```

Arguments

Vision module

Description

Vision module

Usage

```
vision()
```

Value

None

| | |
|-------------|--------------------|
| vleaky_relu | <i>Vleaky_relu</i> |
|-------------|--------------------|

Description

'F\$leaky_relu' with 0.3 slope

Usage

```
vleaky_relu(input, inplace = TRUE)
```

Arguments

| | |
|---------|----------------|
| input | inputs |
| inplace | inplace or not |

Value

None

| | |
|-------|--------------|
| Voice | <i>Voice</i> |
|-------|--------------|

Description

Voice

Usage

```
Voice(
  sample_rate = 16000,
  n_fft = 1024,
  win_length = NULL,
  hop_length = 128,
  f_min = 50,
  f_max = 8000,
  pad = 0,
  n_mels = 128,
  window_fn = torch()$hann_window,
  power = 2,
  normalized = FALSE,
  kwargs = NULL,
  mel = TRUE,
  to_db = TRUE
)
```

Arguments

| | |
|-------------|-----------------------------------|
| sample_rate | sample rate |
| n_fft | number of fast fourier transforms |
| win_length | windowing length |
| hop_length | hopping length |
| f_min | minimum frequency |
| f_max | maximum frequency |
| pad | padding mode |
| n_mels | number of mel-spectrograms |
| window_fn | window function |
| power | power |
| normalized | normalized or not |
| wkwargs | additional arguments |
| mel | mel-spectrogram or not |
| to_db | to decibels |

Value

None

wandb

Wandb module

Description

Wandb module

Usage

wandb()

Value

None

WandbCallback

WandbCallback

Description

Saves model topology, losses & metrics

Usage

```
WandbCallback(
    log = "gradients",
    log_preds = TRUE,
    log_model = TRUE,
    log_dataset = FALSE,
    dataset_name = NULL,
    valid_dl = NULL,
    n_preds = 36,
    seed = 12345,
    reorder = TRUE
)
```

Arguments

| | |
|--------------|--|
| log | "gradients" (default), "parameters", "all" or None. Losses & metrics are always logged. |
| log_preds | whether we want to log prediction samples (default to True). |
| log_model | whether we want to log our model (default to True). This also requires Save-ModelCallback. |
| log_dataset | Options: - False (default) - True will log folder referenced by learn.dls.path. - a path can be defined explicitly to reference which folder to log. Note: subfolder "models" is always ignored. |
| dataset_name | name of logged dataset (default to folder name). |
| valid_dl | DataLoaders containing items used for prediction samples (default to random items from learn.dls.valid). |
| n_preds | number of logged predictions (default to 36). |
| seed | used for defining random samples. |
| reorder | reorder or not |

Value

None

Warp

Warp

Description

Apply perspective warping with ‘magnitude’ and ‘p’ on a batch of matrices

Usage

```
Warp(  
  magnitude = 0.2,  
  p = 0.5,  
  draw_x = NULL,  
  draw_y = NULL,  
  size = NULL,  
  mode = "bilinear",  
  pad_mode = "reflection",  
  batch = FALSE,  
  align_corners = TRUE  
)
```

Arguments

| | |
|---------------|---------------|
| magnitude | magnitude |
| p | probability |
| draw_x | draw x |
| draw_y | draw y |
| size | size |
| mode | mode |
| pad_mode | padding mode |
| batch | batch |
| align_corners | align corners |

Value

None

| | |
|----------------|-----------------------|
| waterfall_plot | <i>Waterfall_plot</i> |
|----------------|-----------------------|

Description

Plots an explanation of a single prediction as a waterfall plot. Accepts a `row_index` and `class_id`.

Usage

```
waterfall_plot(object, row_idx = NULL, class_id = 0, dpi = 200, ...)
```

Arguments

| | |
|-----------------------|--|
| <code>object</code> | ShapInterpretation object |
| <code>row_idx</code> | is the index of the row chosen in <code>test_data</code> to be analyzed, which defaults to zero. |
| <code>class_id</code> | Accepts a <code>class_id</code> which is used to indicate the class of interest for a classification model. It can either be an int or str representation for a class of choice. |
| <code>dpi</code> | dots per inch |
| <code>...</code> | additional arguments |

Value

None

| | |
|---------------|----------------------|
| WeightDropout | <i>WeightDropout</i> |
|---------------|----------------------|

Description

A module that wraps another layer in which some weights will be replaced by 0 during training.

Usage

```
WeightDropout(module, weight_p, layer_names = "weight_hh_l0")
```

Arguments

| | |
|--------------------------|-------------|
| <code>module</code> | module |
| <code>weight_p</code> | weight_p |
| <code>layer_names</code> | layer_names |

Value

None

 WeightedDL

WeightedDL

Description

Transformed 'DataLoader'

Usage

```

WeightedDL(
  dataset = NULL,
  bs = NULL,
  wgts = NULL,
  shuffle = FALSE,
  num_workers = NULL,
  verbose = FALSE,
  do_setup = TRUE,
  pin_memory = FALSE,
  timeout = 0,
  batch_size = NULL,
  drop_last = FALSE,
  indexed = NULL,
  n = NULL,
  device = NULL,
  persistent_workers = FALSE
)

```

Arguments

| | |
|--------------------|--------------------|
| dataset | dataset |
| bs | bs |
| wgts | weights |
| shuffle | shuffle |
| num_workers | number of workers |
| verbose | verbose |
| do_setup | do_setup |
| pin_memory | pin_memory |
| timeout | timeout |
| batch_size | batch_size |
| drop_last | drop_last |
| indexed | indexed |
| n | n |
| device | device |
| persistent_workers | persistent_workers |

Value

None

| | |
|--------------|---------------------|
| weight_decay | <i>Weight_decay</i> |
|--------------|---------------------|

Description

Weight decay as decaying 'p' with 'lr*wd'

Usage

```
weight_decay(p, lr, wd, do_wd = TRUE, ...)
```

Arguments

| | |
|-------|-------------------------|
| p | p |
| lr | learning rate |
| wd | weight decay |
| do_wd | do_wd |
| ... | additional args to pass |

Value

None

Examples

```
## Not run:

tst_param = function(val, grad = NULL) {
  "Create a tensor with `val` and a gradient of `grad` for testing"
  res = tensor(val) %>% float()

  if(is.null(grad)) {
    grad = tensor(val / 10)
  } else {
    grad = tensor(grad)
  }

  res$grad = grad %>% float()
  res
}

p = tst_param(1., 0.1)
weight_decay(p, 1., 0.1)
```

End(Not run)

XResNet

XResNet

Description

A sequential container.

Usage

```
XResNet(block, expansion, layers, c_in = 3, c_out = 1000, ...)
```

Arguments

| | |
|-----------|---------------------------------|
| block | the blocks to pass to XResNet |
| expansion | argument for inputs and filters |
| layers | the layers to pass to XResNet |
| c_in | number of inputs |
| c_out | number of outputs |
| ... | additional arguments |

xresnet101

Xresnet101

Description

Load model architecture

Usage

```
xresnet101(...)
```

Arguments

| | |

 zoom

Zoom

Description

Zoom

Usage

```
zoom(img, ratio)
```

Arguments

| | |
|-------|-------------|
| img | image files |
| ratio | ratio |

Value

image

 Zoom_

Zoom

Description

Apply a random zoom of at most ‘max_zoom’ with probability ‘p’ to a batch of images

Usage

```
Zoom_(
  min_zoom = 1,
  max_zoom = 1.1,
  p = 0.5,
  draw = NULL,
  draw_x = NULL,
  draw_y = NULL,
  size = NULL,
  mode = "bilinear",
  pad_mode = "reflection",
  batch = FALSE,
  align_corners = TRUE
)
```

Arguments

| | |
|---------------|----------------------|
| min_zoom | minimum zoom |
| max_zoom | maximum zoom |
| p | probability |
| draw | draw |
| draw_x | draw x |
| draw_y | draw y |
| size | size |
| mode | mode |
| pad_mode | pad mode |
| batch | batch |
| align_corners | align corners or not |

Value

None

zoom_mat

Zoom_mat

Description

Return a random zoom matrix with ‘max_zoom’ and ‘p’

Usage

```
zoom_mat(
  x,
  min_zoom = 1,
  max_zoom = 1.1,
  p = 0.5,
  draw = NULL,
  draw_x = NULL,
  draw_y = NULL,
  batch = FALSE
)
```

Arguments

| | |
|----------|--------------|
| x | tensor |
| min_zoom | minimum zoom |
| max_zoom | maximum zoom |
| p | probability |

| | |
|--------|--------|
| draw | draw |
| draw_x | draw x |
| draw_y | draw y |
| batch | batch |

Value

None

&.fastai.torch_core.TensorMask
Logical_and

Description

Logical_and

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
x & y
```

Arguments

| | |
|---|--------|

| y | tensor |

Value

tensor

%% *Fastai assignment*

Description

The assignment has to be used for safe modification of the values inside tensors/layers

Usage

left %% right

Arguments

| | |
|-------|-------------------|
| left | left side object |
| right | right side object |

Value

None

 %%.fastai.torch_core.TensorMask
Floor mod

Description

Floor mod

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
x %% y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

 %%.fastai.torch_core.TensorMask
Floor divide

Description

Floor divide

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'
x %%/ y
```

Arguments

| | |
|---|--------|
| x | tensor |
| y | tensor |

Value

tensor

`^.fastai.torch_core.TensorMask`
Pow

Description

Pow

Usage

```
## S3 method for class 'fastai.torch_core.TensorMask'  
a ^ b
```

Arguments

| | |
|---|--------|
| a | tensor |
| b | tensor |

Value

tensor
